RESOLUTION ON THE REPORT OF THE COMMITTEE APPOINTED TO ENQUIRE INTO THE SYSTEM OF ENGAGING NATIVE SEAMEN IN CALCUTTA.

MUNICIPAL DEPARTMENT.—MARINE.

Darjeeling, the 19th June 1885.

RESOLUTION.

Read—

A Report, dated 10th July 1884, from Mr. W. H. Grimley, President of the Committee appointed to inquire into the system of engaging native seamen in Calcutta.

The Bengal Chamber of Commerce, when commenting on the provisions of a Bill for the amendment of the Merchant Shipping Act, brought to the notice of the Government the defects in the present system of engaging lascar crews in Calcutta, and suggested several remedial measures, among which was the introduction into Calcutta of the "continuous discharge" system which is in force at Bombay. The Lieutenant-Governor consulted the Board of Revenue and other authorities concerning the Chamber's remarks; but the subject proved to be one of considerable difficulty, and called for special inquiry at the hands of persons specially conversant with it. Accordingly, Sir Rivers Thompson appointed a small Committee in February 1883 to inquire into and report on the subject. Owing, however, to the absence of some of the members and other circumstances, a delay occurred, and the Committee as originally constituted was modified. The final composition of the Committee

are generally in the neighbourhood of the shipping, and the men look out for work independently of one another. In Calcutta, however, the circumstances, as already noticed, are quite the reverse. The Committee do not consider that the adoption of this system would secure any improvement, and the Lieutenant-Governor concurs with them. The broker can be made responsible for abuses detected. His elimination would merely distribute the responsibility among a large number of individuals of the class of the present sircars, over whom no effective control could be exercised. The Chamber's first proposal would therefore, it seems, entail either the introduction of the English system (which is their third proposal) or the replacement of the brokers by paid ghat serangs. The English system, as already remarked, is not adapted to the circumstances of Calcutta, and the third proposal is therefore inadvisable. The second of the above alternatives would not suit the needs of the majority of the shipping firms which, unlike Messrs. Mackinnon, Mackenzie and Company, cannot provide constant employment for paid serangs, and would object to be deprived of the services of the licensed brokers; while there would be less ground to expect probity among serangs who are a poorer and less educated class than the licensed brokers. The Committee are not prepared, therefore, to recommend the abolition of the brokers, and this conclusion appears to the Lieutenant-Governor to be a sound one. The second proposal is also rejected by the Committee as impracticable. They point out that the lascars could not get the note cashed except at a heavy discount, and they consider, rightly in the opinion of the Lieutenant-Governor, that he would be unwilling to engage on such terms.

10. The Bombay plan of "continuous discharges" is the last proposal that the Chamber advocates. Its chief features are thus described by the Committee—

When a native seaman is engaged, a certificate is filled in with particulars which are carefully ascertained in the Shipping Office of his age, height, and the marks on his person. The reverse of the certificate contains columns for showing the name of the ship, the dates of engagement and discharge, the character of the man as certified in the ship's log, &c. After the man's measure has been taken, and the distinguishing marks on his body ascertained, and these particulars have been noted in the certificate, the licensed shipping broker, who is in attendance, pays the advance, having previously warned the man that the serang has nothing to do with his wages in any way, and that it is not to the serang to whom he will in the future be indebted for a ship, but to his own discharge certificate, which will regulate his promotion or degradation, and any increase or reduction of wages consequent thereon. The man's name is then entered in the ship's articles, with the number of his certificate, and he is now allowed to leave, but not to take away the certificate. This, after being copied in a register, is put into a tin box and forwarded on board and placed under lock and key until the time of discharge comes round.

On the arrival of the vessel at the port of discharge, all the tin boxes containing the certificates are taken to the Shipping Office, together with the official log-book; and a clerk takes each certificate and fills in the particulars on its reverse, of the service, name of ship, character, &c., and these entries are signed by the master of the vessel and the Shipping Master. The like entries are made in the office register. The clerk then rolls up and returns the document to its proper case indicated by its number on the lid, and calls each man and hands his discharge to him, after which the man receives his wages in the presence of the Shipping Master and goes about his business.

If any lascar is found to have tampered with his certificate, it is taken from him and kept in the Shipping Office until he confesses, and he is then furnished with a fresh certificate with all the particulars corrected and authenticated, for which he has to pay eight annas, which is the charge made in the first instance. The death of any lascar afloat causes the document to be cancelled by writing across it the fact and the date.

There is space on the reverse of the certificate for many entries of discharge, and when all this is filled up, the seaman can obtain what is called a second issue certificate. The face of this second issue gives an analysis of the characters entered on the first issue. This analysis is entered in a "register of second issues" which is kept up in the Shipping Office.

These certificates, after the possessor has made a few voyages, show the exact worth of a man on board. If they show invariably a good discharge, he is engaged without reference to the serang or any other person, but if there is any falling off in ability or conduct, the offer of reduced wages is the inevitable result.

The system has been in force in Bombay for about nine years, and has proved a complete success. The serang is shipped, and each seaman shows his certificate and is rated accordingly, his promotion and wages depending solely on his merits as recorded on his certificate.

11. This system clearly possesses numerous advantages over that in force at Calcutta. Under it a man with a good discharge can be sure of finding

careful record of each lascar's appearance must facilitate his arrest in the event of desertion. An objection was raised that the system was merely the revival of the old plan of register tickets which had proved inoperative both in England and India; but the Committee find from an examination of the history of the registry system that it was done away with solely from reasons connected with its working in the case of European sailors, and without any reference to native seamen; so that the argument that that system had failed in regard to lascars falls to the ground. The Committee recommend that the Bombay system should be tried in Calcutta.

12. The Committee have also made a number of valuable suggestions connected with the introduction and working of the system. They do not recommend that the practice, at the time of engagement, of each man's returning his advance to the broker should be absolutely forbidden; for the broker, being responsible to the ship's agent for the amount advanced, should be allowed to make the best arrangement he can to guard against loss. But they would absolutely discountenance and put down as far as possible the similar transaction that takes place at the time of discharge. The Committee would also insist on prosecutions being instituted in every case except on good cause shown to the satisfaction of the Shipping Master; and in order to obviate the present difficulties and inconveniences, they recommend that the Shipping Master and his Deputy and Assistant should be vested with magisterial powers to dispose of cases of desertion summarily, and that the present high fee for arrest be abolished. Lastly, they recommend that the system of licensing boarding houses for native seamen should be re-enforced as a useful auxiliary to the continuous discharge system. After falling into temporary disuse, it was revived in 1880 with the object of checking the practice of giving substitutes; and for that end the keeper of the house was required to keep up a register regarding the native seamen admitted and their movements. The police were directed to inspect these registers, but their supervision, in the absence of materials for testing the registers, could effect no check. Such materials under the continuous discharge system will be found in the Shipping Office, and the Committee recommend that the scrutiny should be made there.

13. The Lieutenant-Governor generally concurs in the Committee's views, and is of opinion that the Bombay system should be introduced at Calcutta. It must, however, be introduced, as the Committee observe, on the voluntary principle. Government cannot make it compulsory by enactment. It must be left to the good sense of the Shipping Companies to make the possession of a "continuous discharge" an indispensable condition of employment; and if they and the masters of vessels set a value on the certificate, the lascars will soon learn to do the same. Success will depend on the co-operation of the Companies. Messrs. Mackinnon, Mackenzie and Company, who now employ their own ghât serangs, would be especially concerned with the change; but all Companies would need to forego the present practice of shipping and discharging crews on board. This practice has its conveniences; but unless it is relinquished and the shipment and discharge are conducted at the Shipping Office, it would be impossible, at the inception of the scheme at least to carry out the details connected with the certificates. Afterwards, when the arrangements are in good working order, it might be possible to renew the concession in the cases of discharges. Sir Rivers Thompson is also willing to adopt the recommendations of the Committee regarding prosecutions, arrests, and the disposal of cases of desertion. Before, however, sanctioning any change, the Lieutenant-Governor would be glad if the Bengal Chamber of Commerce would consider the proposals and favour him with a report as to how far the Shipping Companies are willing to lend their assistance in giving the scheme a fair trial.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

CINCHONA PLANTATION IN BENGAL FOR 1884-85, AND THE ANNUAL REPORT OF THE QUINOLOGIST FOR THE SAME YEAR.

MUNICIPAL DEPARTMENT—AGRICULTURE.

Darjeeling, the 19th June 1885.

RESOLUTION.

READ—

The Annual Report of the Government Cinchona Plantation in Bengal for the year 1883-84, and the Annual Report of the Quinologist for the same year.

The addition to the plantation of 174,800 trees of the quinine-yielding cinchonas known as *Calisaya Verde* and *Calisaya Morada* is the most interesting feature in the operations of the year. These trees have been raised from seed supplied in 1882-83 by the Secretary of State, and the varieties are known in Bolivia to produce some of the finest of the yellow bark of commerce. It would be premature to say whether the plants would be equally successful in Sikkim, although their present appearance is healthy. Another satisfactory feature is the extension of the cultivation of the rich variety of yellow bark known as *Ledgeriana*. Of this variety no less than 231,900 trees were planted out, while the hybrid cinchonas were increased by 64,600. Altogether a considerable advance has been made towards the substitution of quinine-producing trees for the sorts yielding the less valuable alkaloids.

2. The total number of trees of all kinds on the plantation at the close of the year was 4,912,111, namely red (*Succirubra*) 3,232,000, yellow (*Calisaya Ledgeriana*) 1,086,118, yellow (*Calisaya Verde* and *Morada*) 183,300, hybrid 385,100, and other kinds 25,593. The crop of the year amounted to 339,201 lbs. of dry bark, of which 325,125 lbs. were red and 14,076 were yellow. The whole of this crop, with the exception of a small quantity, was as usual made over to the Febrifuge Factory for disposal.

3. The expenditure on the plantation amounted to Rs. 81,726-14-9 against the budget allotment of Rs. 97,805. Of this Rs. 12,480-6 represented the capital expenditure on the new plantation at Rungjung, and the balance (Rs. 69,246-8-9) the working expenses of the old plantations at Rungbee, Mungpoo, and Sittong. The total amount sunk by the Bengal Government on cinchona plantations and factory since 1862 aggregates Rs. 10,84,202, which has been recouped more than twice over by the saving effected by the substitution of cinchona febrifuge for quinine in Government medical institutions.

4. Dr. King again notices the continued failure of the Carthagena bark, which he thinks will never be successfully grown in Sikkim. A quantity of *Remija* seed, which produces a quinine-yielding bark under the name of *Cuprea*, was obtained from South America, and some 40 seedlings have been raised. The plants do not look altogether healthy, and it is feared that the climate of Sikkim will not suit their growth.

5. The demand for cinchona seeds and seedlings has greatly fallen off in consequence of the low prices that have ruled for bark during the last two years. The surplus seed of the *Calisaya Ledgeriana* was as usual distributed during the year gratuitously among applicants.

6. The cost of manufacture during the year was Rs. 12-5-11 per pound of ordinary febrifuge, and Rs. 18-8-11 per pound of crystalline febrifuge. The rates are higher than those of the previous year, and this is attributed partly to the large expenditure incurred on new fittings for the factory, and partly to the inferior quality of the bark used, as well as to the smaller quantity worked up during the year under review. The issues also fell considerably below those of 1883-84, as will be seen from the following table:—

				1883-84.		1884-85.	
				lbs.	oz.	lbs.	oz.
To Medical Depôt, Calcutta	2,620	0	2,024	8
Ditto, Bombay	1,000	0	500	0
Ditto, Madras	530	0	20	0
To Inspector-General of Civil Hospitals (for district medical officers of Bengal)	618	4	571	0
To Inspector-General of Jails (for jails and lock-ups in Bengal)	32	4	61	0
Sold to the public	4,276	0	3,965	8
Given as samples	18	4	10	4
Total				9,144	12	7,152	4

during the year has ruled lower than it has done for many years.

7. The revenue derived from the sale of the febrifuge, seed, plants and bark, amounted to Rs. 1,24,225-2 :—

	Rs.	A.	P.
By sale of febrifuge, seed, plants, and bark to the public ...	69,250	6	0
By credits from the Medical Depôt of Calcutta ...	35,516	4	0
Ditto dit o Bombay ...	8,250	0	0
Ditto ditto Madras ...	490	0	0
Ditto Inspector-General of Civil Hospitals, Bengal ...	9,648	8	0
Ditto Inspector-General of Jails, Bengal ...	1,080	0	0
Total ...	1,24,225	2	0

The operations of the year resulted in a profit of Rs. 37,582-6-8, which is equal to a dividend of about $3\frac{1}{2}$ per cent. on the capital outlay of Rs. 10,84,202-6. It must, however, be borne in mind that these profits do not represent the whole of the gain of the year. The saving effected by the substitution of the febrifuge in Government medical institutions for an equal quantity of quinine which would otherwise have been used amounted to Rs. 20,000.

• 8. The thanks of the Lieutenant-Governor are again due to Dr. King for his efficient management of the department, and to Mr. Gammie who performed Dr. King's duties for seven months during the absence of the latter on furlough. Mr. Gammie also held charge of the factory throughout the year. The other assistants are well spoken of.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Government of Bengal.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 27th June 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Burdwan, June 27 '85	3.31	Weather—seasonable. Agricultural operations progressing favourably. Prospects good. Price of rice 12 to 14 seers per rupee.
	Culna ...	3.57	
	Cutwa ...	3.98	
	Raneegunge ...	3.54	
	2 Bankoora, „ 27 „	3.17	Weather—cloudy and rainy. Transplanting of <i>aus</i> paddy going on briskly all over the district. Seedlings of <i>aman</i> paddy not yet ready for being transplanted. Price of rice shows a tendency to rise. Public health good.
	Bishenpur ...	3.54	
	3 Beerbhoom, „ 27 „	2.23	Weather—cloudy and showery. Ploughing and sowing of rice crop in progress, prospects favourable. Price of rice slightly higher. Cholera still prevalent.
	Rampore Hat ...	1.97	
	4 Midnapore, „ 27 „	1.58	Weather—generally seasonable. Excessive rainfall has stopped cultivation in the Ghatal sub-division, elsewhere much progress is being made. Public health fair.
	5 Hooghly, „ 27 „	1.55	
Serampore ...	4.52	Weather—seasonable. All crops are now doing well. Prices easy. Public health good.	
Jehanabad ...	4.86		
Howrah, „ 29 „	4.56*	Weather—seasonable. Cultivation of rice land is being pushed on everywhere. Young sugarcane is also reported as doing well. Public health continues good everywhere.	
Oolooberiah ...	1.70		
Central Districts.			
PRESIDENCY DIV.	6 24-Pergha, June 29 '85	Weather—seasonable. Early rice and jute doing well. <i>Amun</i> paddy seedlings thriving. In low places transplanting going on. Public health generally good.
	7 Nudda, „ 27 „	2.06	
	Kooshtea ...	3.29	Weather—cloudy and rainy. Prospects of crops good. There was rain in the district daily throughout the week. More rain is expected.
	Meherpur ...	4.85	
	Choonamgah ...	3.85	
	Ranaghat ...	1.25	
	8 Khoolua, „ 27 „	3.02	Weather—cloudy with showers and cool. <i>Aus</i> paddy is coming up well and also <i>aman</i> seedlings; ploughing continues. Public health good.
	9 Jessore, „ 27 „	2.60	
	Jhenidah ...	4.11	Weather—cloudy with occasional showers of rain. Prospects of paddy crop continue favourable. Insects are doing some injury in the Sudder sub-division. Deaths from fever reported from Bongong sub-division.
	Magoora ...	1.65	
Narail ...	1.67		
Bongong ...	2.67		
10 Moorsheadabad, „ 27 „	1.01	Weather—seasonable. Prospects of crops now fairly good. Common rice selling at from 12 to 13½ seers per rupee. Public health good.	
11 Dinagepore, June 26 '85	2.66		
RAJSHAHY DIV.	12 Rajshahye, „ 27 „	1.45	Weather—cloudy and rainy. Rain has done immense good. Sowing of <i>aus</i> and <i>aman</i> paddy continues, and standing crops (paddy, <i>til</i> , jute, &c.) promise well. Public health fair.
	Nattore ...	1.65	
	13 Rungpore „ 27 „	4.73	Weather—cloudy with easterly wind. Prospects of crops good. Transplanting of <i>aman</i> continues. Price of rice stationary. Cholera has much lessened. Public health continues good.
	Nilphamari ...	2.58	
	Gaibanda ...	2.52	
	Kurigram ...	5.24	
	14 Bogra, „ 27 „	0.88	There was a smart earthquake from north to south at 8-15 A.M. on the 25th. Prospects of <i>aus</i> good; jute and sugarcane thriving. Sowing of <i>aman</i> going on, but more rain is wanted. Public health fair.
	15 Pubna, „ 27 „	2.23	
	Serajgunge ...	1.82	Weather—cloudy and rainy; wind easterly. Crops look well. Rivers not high. Public health good.
	16 Darjeeling, „ 27 „	7.91	
17 Julpigoree, „ 27 „	1.61	Weather—hot with heavy rain. State and prospects of crops most favourable. A severe earthquake at 8-10 A.M. on 25th instant, and another shock at 6-30 P.M. idem.	
			Weather—very hot for the rains; close steamy weather. A break in the rains during the week, but there has been on the whole plenty of rain, and prospects of all crops good. <i>Bhadai</i> paddy is being reaped, and is a good crop in the Alipur sub-division. A few cases of cholera here and there.

* For week ending 27th instant.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>condid</i> <i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, June 27 '85	1.23	Weather—seasonable. Harvesting of early rice going on; cutting of jute commenced; sugarcane doing well; damage to paddy crops in low lands is anticipated owing to sudden rise of water. Prices of rice rising. Public health good.
	Manickgunge ...	4.58	
	Manbhigunge ...	4.88	
	Naraingunge ...	4.16	Weather—sufficient rain. Crops generally good. Health fair.
	19 Furrupore, „ 27 „	1.90	
	Madaripore ...	4.58	
	Goalundo ...	2.35	Weather—hot; sufficient rain with occasional high wind. Prospect of crops good. Cholera and fever are prevalent in the town and in some of the villages.
	20 Backergunge, „ 25 „	4.56	
	21 Mymensinga, „ 26 „	1.75	
	Jamalpur ...	1.23	Weather—hot. State and prospects of crops good. Public health fair.
CHITTAGONG DIV.	Kishoregunge ...	2.99	
	Attia ...	4.35	
	Netrokona ...	0.37	Weather—hot with passing clouds. Prospects of crops generally good. Sowing of <i>aus</i> paddy still continues. Prices variable. Cholera lingers.
	22 Chittagong, June 30 '85	1.31	
	23 Nonkholy, „ 26 „	4.23	
	Fenny „ „	3.51	Weather—frequently cloudy and rainy. Prospects of crops good; <i>aus</i> plants in ear. A few cases of cholera reported; otherwise public health good.
	24 Tipperah „ 25 „	3.00	
	Brahmanbareah ...	4.43	
	Chandpore ...	5.65	Weather—cool with high winds and bright sunshine. A break in the rains coming very opportunely after the incessant downpour of the previous week. The injury done to crops from the rainfall, and a breach in the embankment on the Gumti, has been immense. Public health good.
	25 Chittagong Hill „ 23 „	3.45	
BEHAR.	Tracts.		
	Hill Tipperah, „ 24 „	6.00	Weather—rainy and cloudy with occasional sunshine. Sowing in <i>jooms</i> over. Paddy and cotton doing well. Land being ploughed for late rice crop.
			Weather—rainy. <i>Satya</i> paddy growing. Prospects of <i>joom</i> crops fair. Cases of cholera still occurring in Agartala; otherwise public health good.
	26 Patna, June 27 '85	1.94	Weather—cloudy with east wind. Rain during the week has been of great benefit to the <i>bhadoi</i> sowings, but more is required. A few cases of cholera reported from Behar, otherwise public health good.
	Barh ...	1.07	
	Behar ...	0.60	
	27 dyn. „ 27 „	2.02	Weather—rain has been general throughout the district, and the temperature has fallen. The rain has been most useful; ploughing and sowing of <i>bhadoi</i> crops and rice are going on, and the people have ample occupation. Public health fair.
	28 Shahabad, „ 27 „	3.75	
	Buxar ...	0.68	
PATNA DIV.	Sasaram ...	0.82	Weather—seasonable. The only crop now on the ground is sugarcane, which is doing well.
	Bhabbhua ...	2.03	
	29 Durbhunga, „ 27 „	0.81	
	Tajpur ...	1.33	Weather—east winds prevailing, sky occasionally cloudy. Prospects of standing crops have much improved by the late rain. <i>Bhadoi</i> sowing is being pushed on with great activity, but more rain is wanted. Prices continue stationary. Cholera abated in the town; it had appeared in a sporadic form in some localities in the interior.
	30 Mozufferpore, „ 27 „	0.47	
	Hajipur ...	1.85	
	Sitamarhi ...	0.54	Weather—hot and close with light rain occasionally. The rain that has fallen this month, though it has done good is not fully sufficient either for <i>bhadoi</i> or <i>aghani</i> paddy sowings, and more rain is much wanted. Slight fall in prices. Public health generally good.
	31 Sarun, „ 27 „	3.37	
	Sewan ...	1.51	
BIHAR DIV.	32 Champaran „ 27 „	1.25	Weather—cloudy with east wind. Late rain has done much good to standing crops and has also facilitated ploughing and sowing of <i>bhadoi</i> and <i>aghani</i> crops. Prices stationary. Some cases of fever, small-pox and cholera reported from the interior. Public health fair.
	33 Monghyr, June 27 '85	2.08	
	Begusarai ...	0.69	
	Jamui ...	0.63	Weather—more or less high east wind, sky overcast. Rain has been of much benefit; sowing proceeding. Cholera reported from some parts of the district. Prices steady.
	34 Bhagulpore, „ 27 „	0.61	
	Banka ...	1.90	
	Mudchpurah ...	2.40	Ploughing and sowing of <i>bhadoi</i> crops going on briskly. More rain much wanted; the fall has been below the average. Prices stationary. Public health good.
	Supaul ...	0.67	
	35 Purneah „ 27 „	2.05	
BIHAR DIV.	Kissengunge ...	1.35	Weather—hot and close. State and prospects of crops fair. Health fair
	Airarah ...	0.65	
	36 Maldah „ 27 „	2.83	
	Chunchal ...	2.00	Weather—seasonable. Generally overcast with occasional storms. The rainfall is not uniform; it has been heavy in the north and at head-quarters, scanty in the north-east (Bamangola) and south (Nowabunge), and moderate elsewhere. Rain has improved the condition and prospects of the crops. Sowing of <i>bhadoi</i> paddy on high lands still continues, and in some places it is being weeded. Coarse rice selling at from 12 to 15½ seers per rupee. Public health fair.
	37 Sonthal Pergha „ 27 „	2.69	
	Deoghur ...	1.72	
	Godda ...	1.81	Weather—general rain for the past three days; three distinct but light shocks of earthquake at 6-40 A.M. on the 25th; since yesterday (26th) strong easterly gale with heavy showers. The rain has been general and uniform throughout, except in Deoghur and Godda, where it has been lighter. Ploughing going on vigorously, but the people awaiting clear weather for sowing. <i>Bhadoi</i> will be backward. Cholera in many places.
	Kajmehul ...	3.42	
	Jamtari ...	2.40	
	Lakour ...	2.62	

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, June 26 '85	0.62	Weather—cloudy. <i>Beali</i> paddy being harrowed <i>Sarad</i> plants growing well. Rivers rose up to about the high water mark, and caused some damage to the growing rice plants. Price of rice remains almost unchanged. Public health generally good, with the exception of a few cases of cholera in the interior.
	39 Pooree, " 25 "	0.30	Weather—high southerly breeze with clouds in the beginning of the week, hot and cloudy towards the end. Several breaches have been made in the embankments of the river Bhargaoi, and considerable damage is apprehended to the <i>sarad</i> sowings in pergunnahs Rahang and Chabbiskud. Common rice is selling at an average of 20 seers 4 chittacks per rupee in the Sudder sub-division and 18 seers 3 chittacks in the Khoorda sub-division. Cholera has appeared in the town.
	40 Balsaore " 26 "	1.87	Weather—hot and cloudy. Ploughing and sowing are going on vigorously. Public health generally good, though cholera reported here and there in the interior and in the town.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazari-bagh, June 26 '85	6.92	Weather—cool and cloudy with occasional showers up to 24th; clear since yesterday (25th). Agricultural operations are in progress throughout the district. Cholera still prevalent in some places; new outbreaks reported from the Hazari-bagh Jail.
42	Lohardugga, " 27 "	2.62	Weather—seasonable. Good rain during the week; very heavy towards the south. Ploughing and sowing going on vigorously. Public health good.
43	Singbhoom, " 26 "	5.51	Weather—seasonable, constantly clouded with almost incessant rain. Agricultural operations are being vigorously pressed on, and all crops are so far doing well. A few cases of cholera reported from Sersikeyla, otherwise public health good.
44	Manbhoom, " 27 "	4.11	Weather—wet and cool. The recent heavy rain has been general all over the district. Ploughing and sowing now going on. <i>Amra</i> seedlings are up. Prospects improved. Water-supply now plentiful. Prices continue high. Cholera still prevalent.

Published for general information.

The average fall of the corresponding period for 24 years, S. G.'s Office	20.16

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermog thermometers are verified, and the readings have been corrected to a standard constructed and verified at Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four above the ground.

The barometer readings are corrected approximately to those of the standard Newmann's N formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed at the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Bockley's anemograph. The mouth of the rain-gauge is one foot above the ground.

c overcast, g gloomy, d drizzling rain, t thunder, p passing temporary showers.

• Mean for six days.

Station.—Summers.—The normal means of air pressure and temperature are the arithmetical averages or means of the readings during the same month. The normal means of the amount of precipitation is the mean of the monthly means. The normal means of the amount of snowfall, the normal means are the numerical means or averages of the monthly means.

	Average cloud amount at 10 A. M. for week.	Rainfall of week at observing stations.	RAINFALL.										Representative station.	DISTRICT.	METEOROLOGICAL DIVISION.
			Of week.		Since 1st of May.			Since 15th May.			Average number of rainy days.	Normal number of rainy days.			
			Mean for district.	Normal mean.	Mean for district.	Normal mean.	Variation.	Mean for district.	Normal mean.	Variation.

for the past ten years. The variations are *negatives* when the mean for the week is less than the corresponding normal mean, and *positives* when greater. The number denoting cloud amount represents the part of the sky covered, the whole sky being denoted by 10. Under the head "District" observations for the period in question during the past 12 years. The means of the "district" are the numerical averages of the rainfall returns, recorded on one on which at least 20 hundredths of an inch fell.

Climatological Division.	District.	Station.	RAINFALL.							TOTAL.		Total rainfall since 1st of month.	Average total rainfall from 1st of month.	Total rainfall since 15th May.	Average rainfall from 15th May to date.
			Saturday, 30th June.	Sunday, 1st June.	Monday, 2nd June.	Tuesday, 3rd June.	Wednesday, 4th June.	Thursday, 5th June.	Friday, 6th June.	Number of rainy days.	of Rainfall week.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the wanting, the corresponding spaces in the total rainfall column are left blank.

Calcutta, the 30th June 1885.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS
TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 26TH
OF JUNE 1885.**

In the summary for the previous week, it was reported that a small cyclonic storm which had previously formed over the Sunderbuns had travelled in a westerly direction, and on Friday, the 19th, its centre was to the west of Midnapore. It then moved in a south-westerly direction, and on the following day the storm was to the west of Orissa, probably near Sumbulpore, but the indications at the Bengal stations appeared to show that it was becoming more feeble. On the Sunday, however, the barometric depression became more marked, and it began to move again in a northerly direction, passing apparently through the western part of Chutia Nagpore, and reaching the North-West Provinces, where it finally filled up and disappeared near Allahabad. In its progress it of course brought considerable amounts of rain to the districts through which it passed, and with its advance a fairly strong monsoon blew over the Province, and brought up good rain to all districts. The movement or path of this storm has been altogether most unusual.

On Thursday, the 25th instant, another small barometric depression or cyclonic storm commenced to form at the head of the Bay. It was formed probably a little further south than the previous storm, but it was certainly at no great distance from the Sunderbuns. It developed slightly and advanced in a westerly direction, and on Friday morning its centre was to the south of Saugor Island. The barometric depression was considerable, and at 2 P.M. on this day a pressure of 29.369" was recorded at Saugor Island, a pressure which is rarely recorded in Bengal, unless it is accompanied by a somewhat severe storm. The storm was, however, a small one, and only gave rise to moderate winds at the land stations, though probably at sea near the centre of the storm, winds were strong and the sea high. This storm reached the Balasore coast probably during Friday night, and then advanced in a north-westerly direction.

During the existence of the first storm in Orissa and South-West Bengal, there was a natural tendency of the monsoon current to set towards the western districts of the Province. Again, during the formation of the second storm, the indraught towards it caused a very rapid diminution in the strength of the monsoon current blowing over the land, and particularly of the current which should have set towards East and North Bengal. It will thus be seen that during the week, conditions were not favourable for heavy rainfall over East and North Bengal, or perhaps it would be more correct to say over the eastern and northern districts generally, but that conditions were moderately favourable for the occurrence of good general rain over the western districts, and particularly over the south-western districts. That rain has thus been general in these districts is shown by the fact that in Chutia Nagpur the average number of rainy days at all stations was no less than 6.5, and in South-West Bengal the average number of rainy days at all stations has been 5.7. The western districts generally have received rain on an average of from 4 to 5 days, while the northern and eastern districts only received rain on 4 days.

Pressure, as may be expected, has been below the normal throughout the week, and those stations which have been most directly under the influence of the cyclonic storms noted above have shown the greatest defects. The average defect for the week at Saugor Island has been no less than 0.143," at Calcutta it has been 0.131," while in North Behar and East Bengal it has been about 0.05". The average defect over the whole Province has been 0.086", against an average defect of 0.036" during the previous week.

With the very frequent rain showers which have occurred during the week in nearly all districts, temperature has been low, and at all stations, except Durbhunga and Dacca, it has been below the normal. The average defect from the normal has been about 1.5°, but the greatest defects have been in South Behar and Chutia Nagpur, where at Gya it has been 3.8° and at Hazaribagh 4.5°.

As has been previously stated, rainfall has been general and frequent in all the western and southern districts, while in the eastern and northern districts the falls have been comparatively much less frequent and lighter. Chutia Nagpur has received a most abundant rainfall, and practically all stations in this district received rain on every day in the week. The average fall in Chutia Nagpur for the week has been 6.06 inches against a normal average of 2.15 inches, or no less than 282 per cent of the normal. South-West Bengal received rain on an average between 5 and 6 days during the week, and the average amount reported was 2.61 inches against the normal fall of 2.68 inches, which is 97 per cent. of the normal. South Behar has received rain on from 4 to 5 days, and the average amount recorded has been 1.91 inches against the normal 2.24 inches, which represents 76 per cent. of the normal. Orissa has received rain on 4 days and the amounts have averaged about 2.17 inches against the normal 2.27 inches, which represents 95 per cent. of the normal. East Bengal has received rain on about 4 to 5 days and the average fall has been about 2.38 inches against the normal of 4.38 inches, and has thus received only 54 per cent of the normal. North Behar has only had rain on 3.3 days and has averaged 1.25 inches against the normal 2.54 inches, which is only 50 per cent. of the normal, and finally North Bengal on 4.1 rainy days received only 2.22 inches of rain against the normal 5.40 inches, and thus only received 41 per cent. of the normal. From the fact that in certain cases the number of rainy days during the week has been above the normal, while the actual rainfall has been below it, it would tend to show that the rain showers have been lighter than usual, and that the monsoon which has been blowing over the land has been rather below its normal strength.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 26th of June 1885 :—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st month.		Since 1st May 1885.

The mean temperature of the seven days 81.5

The extreme variation of temperature 14.2

The maximum temperature 92.0

The mean relative humidity 94

The total fall of rain from 21st to 27th June 1885 4.48

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 29th June 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE returns received from the principal Municipalities in Bengal, for the week ending 13th June 1885, disclose the following results:—

1. During the week in question births and deaths were recorded in the proportions, respectively, of 23·5 and 32·2 per 1,000 of population, as opposed to 19·6 and 31·7 per 1,000, respectively, during the preceding week ending 6th June, indicating improvement in the registration of both events, particularly of births.

2. These events were registered at the highest rates in the following Municipalities:—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Bhagulpore	44·3	Durbhunga	114·1
Durbhunga	38·5	Bhagulpore	48·0
Tipperah	38·5	Gya	47·1
Chittagong	37·6	Patna	43·1
Gya	36·2	Chittagong	37·6
Howrah	31·5	Burdwan	36·6
				Mozufferpore	31·6
				Suburbs of Calcutta	29·8

3. The subjoined table shows that, as compared with the results of the preceding week, there was a sensible enhancement in the death-rate from cholera with a small diminution in that from the diseases classed under the head of "Other causes," and that the casualties from the rest of the diseases exhibited only fractional variations, with the exception of injury, the mortality from which remained stationary:—

				Ratio per mille during the weeks ending—	
				13th June 1885.	6th June 1885.
Cholera	7·0	5·8
Small-pox	·8	·6
Fever	11·5	11·7
Bowel-complaints	4·8	4·6
Injury	·5	·5
Other causes	7·5	8·4

4. Of the diseases specified above, excluding injury the casualties from which were nowhere noticeably large, and fever which proved conspicuously fatal only in the Gya town at the rate of 21·8 per 1,000 of its population, the other diseases caused the highest mortality in the following Municipalities:—

<i>Cholera.</i>		<i>Small-pox.</i>		<i>Bowel-complaints.</i>		<i>Other Diseases.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Durbhunga ...	73·1	Mozufferpore ...	7·3	Durbhunga ...	15·7	Gya ...	18·4
Chittagong ...	14·1	Durbhunga ...	3·9	Patna ...	13·0	Bhagulpore ...	13·6
Mozufferpore ...	8·5			Bhagulpore ...	10·9	Hughli ...	10·7
Bhagulpore ...	8·1					Patna ...	10·7
Burdwan ...	7·6					Poori ...	10·5
Monghyr ...	6·3					Suburbs of Calcutta ...	9·1
Hughli ...	5·4						
Patna ...	4·9						
Gya ...	3·4						
Suburbs of Calcutta ...	3·5						

It will be observed that the mortality from cholera had abated considerably in the Burdwan town, in comparison with its incidence during the preceding week, but that it prevailed with marked severity in Durbhunga.

5. The mortality referable to *Sex*, *Class* and *Age*, stands as noted below:—

<i>According to Sex.</i>		<i>According to Class.</i>		<i>According to Age.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males ...	33·5	Christians ...	17·4	Under 1 year ...	239·8
Females ...	30·6	Hindus ...	34·0	1 and under 5 years ...	64·9
Ratio of male deaths to every 100 female deaths ...	124	Mahomedans ...	28·7	5 " 10 " ...	27·4
				10 " 15 " ...	18·5
				15 " 20 " ...	18·3
				20 " 30 " ...	19·2
				30 " 40 " ...	17·1
				40 " 50 " ...	14·6
				50 " 60 " ...	33·3
				60 years and upwards ...	55·6

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

GENERAL REMARKS AND EXPLANATIONS

The month's working shows a marked increase in several important staples, such as ginger, gunny-bags, jute, miscellaneous railway material, salt, seed and tobacco; the net increase amounting to 3,041'48 tons over and above the corresponding period last year.

INCREASES.

Ginger Tons 360'93
This article is in pretty general demand now.
Gunny-bags Tons 103'98
Enquiry continues.
Jute Tons 948'66
Business during the month was brisk, and prices advanced 6 to 8 annas. Imports, however, are not keeping pace with the demand.
Miscellaneous Tons 1,120'95
This increase is due to machinery and large quantities of firewood carried locally.
Railway material Tons 545'19
There has been an increase in the coal carried for the Locomotive Department.
Salt Tons 252'34
The increased activity of the jute market has had a like effect on this traffic.
Sugar Tons 49'86
Prices continue cheap, and this combined with low railway freights is helping this traffic.
Seeds Tons 154'96
A demand for mustard-seed has set in again. Linseed is also in request.
Tea Tons 54'73
Musters of the new crop have passed down, and are reported to be quite up to the average of first pickings.
Tobacco Tons 436'73
Both in Calcutta and Rangoon markets enquiry is being made for the better qualities of Rungpore tobacco.

DECREASES.

Ale Tons 7'46
This small decrease will be made up later on.
Food-grain Tons 954'37
This decrease is principally in rice, the local price of which leaves no margin for profitable sale in Calcutta. In addition there is but little rice of last year's crop available for export.
Piece-goods Tons 20'82
This is a small decrease in the face of the traffic that has been carried since January.

G. S. LEONARD, *Traffic Superintendent.*

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 30th May 1885.

PART VI.

Bills introduced into the Council of the Governor General for making Laws and Regulations, or published under Rule 22

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

[Second publication.]

The following Bill was introduced into the Council of the Governor-General of India for the purpose of making Laws and Regulations on the 10th June, 1885, and was referred to a Select Committee:—

No. 11 OF 1885.

A Bill to amend the Indian Registration Act, 1877.

III of 1877 WHEREAS it is expedient to amend the Indian Registration Act, 1877, in manner hereinafter appearing; It is hereby enacted as follows:—

Short title and commencement. 1. (1) This Act may be called the Indian Registration Act, 1885; and

(2) It shall come into force at once.

III of 1877. 2. (1) After clause (f) of section 17 of the Indian Registration Act, 1877, the following clause shall be inserted, that is to say:—

“(ff) any debenture issued by any such company and not creating, declaring, assigning, limiting or extinguishing any right, title or interest to or in immoveable property except in so far as it entitles the holder to the security afforded by a registered instrument whereby the Company has mortgaged, conveyed or otherwise transferred the whole or part of its immoveable property or any interest therein to trustees upon trust for the benefit of the holders of such debentures, or”.

(2) In the second paragraph of section 50 of the same Act, “(ff)” shall be inserted between “(f)” and “(g)”.

3. (1) After clause (l) of section 17 of the same Act the following clause shall be added, that is to say:—

“(m) orders granting loans under the Agriculturists' Loans Act, 1884, and instruments

for securing the repayment of loans made under that Act.”

(2) In the second paragraph of section 50, for the word and letter “and (l)” the letters and word “(l) and (m)” shall be substituted.

(3) In section 58 of the same Act, for the words “or a copy of a certificate under the Land Improvement Act, 1871, sent by the Collector to be registered,” or, where the Land Improvement Loans Act, 1883, is in force, for the words “or a copy of an order under the Land Improvement Loans Act, 1883, sent by the Collector to be registered,” there shall be substituted the following words, namely:—

“or a copy sent to a registering officer under section 89”.

(4) After the second paragraph of section 89 of the same Act the following paragraph shall be inserted, that is to say:—

“Every officer granting a loan under the Agriculturists' Loans Act, 1884, shall send a copy of any instrument whereby immoveable property is mortgaged for the purpose of securing the repayment of the loan, and, if any such property is mortgaged for the same purpose in the order granting the loan, a copy also of that order, to the registering officer within the local limits of whose jurisdiction the whole or any part of the property so mortgaged is situate, and such registering officer shall file the copy or copies, as the case may be, in his Book No. 1.”

4. (1) After clause (d) of section 90 of the same Act the following clause shall be inserted, that is to say:—

“(e) notices given under section 74, or section 76, of the Bombay Land-revenue Code, 1879, of relinquishment of occupancy by occupants, or of alienated land by holders of such land”.

(2) In section 91, for the word and letter “and (c)” the letters and word “(c) and (e)” shall be substituted.

(3) The said Act shall be construed as if the amendments made in it by this section had been made at the time the Act came into force

XII of 1884.

STATEMENT OF OBJECTS AND REASONS.

The objects of this Bill are three :—

- (1) to except mortgage-debentures secured by a registered trust-deed from those provisions of the Indian Registration Act, 1877, which either require that such debentures shall be registered, or, where their registration is optional and they are not registered, give precedence over them, as regards the property on which they are secured, to any registered instrument relating to the same property ;
- (2) to place instruments whereby immoveable property is mortgaged as security for the repayment of loans under the Agriculturists' Loans Act, 1884, on the same footing, in regard to registration, as certificates or orders granting loans, and instruments of collateral security, under the Land Improvement Act, 1871, or, where the Land Improvement Loans Act, 1883, is in force, under that Act ;
- (3) to exempt from registration notices given under sections 74 and 76 of the Bombay Land-revenue Code, 1879, of relinquishment of occupancy by occupants and of alienated land by holders of such land.

2. As regards the first matter, it was represented to the Government of India in 1884 that the heavy expense and trouble entailed on the issue of mortgage-debentures by the joint operation of the Stamp Act and Registration Act practically prevented their being issued. The stamp-duty payable on such debentures has since been remitted, and it seems to the Government of India that, if the trust-deed by which such debentures are secured is registered, the debentures, provided they do not implicate any property beyond that comprised in the trust-deed, and do no more than give effect to the arrangement made by the trust-deed, may well be exempted from registration.

3. The second amendment proposed calls for no explanation. The third seems to be justified on the ground that there is, apart from the Registration Act, a complete official record of the surrenders in question, and that to require in addition that they should be registered under that Act would entail unnecessary trouble and expense on all concerned.

The 29th May, 1885.

ORDERS ON THE REPORT OF THE CALCUTTA SANITARY COMMISSION APPOINTED UNDER SECTION 28, ACT IV (B.C.) OF 1876.

No. 819T—M, dated Darjeeling, the 1st July 1885.

From—J. WARE EDGAR, Esq., c.s.i., Officiating Secretary to the Government of Bengal,

To—The Chairman of the Corporation of the Town of Calcutta.

I AM directed to acknowledge the receipt of your letter No. 295, dated the 4th May, in which you forward copies of the resolutions that have been passed by the Commissioners on the subject of the report of the Commission appointed under section 28 of Act IV (B.C.) of 1876 to consider the cleaning and conservancy of the Town, together with their views and proposals regarding the specific recommendations made by the Commission, and an account of the action taken by them towards carrying certain of the recommendations into effect.

2. The Lieutenant-Governor considers that the appointment of the Commission under section 28 of the Act has been productive of very valuable

results in the collection of much accurate and valuable information regarding the present sanitary condition of the Town, the working of the Corporation, its organization, and its executive and administrative machinery. By the terms of the section under which the Commission was appointed, the scope of the enquiry was limited to the actual condition of the cleaning and conservancy of the Town; and it did not fall within its province to collect evidence as to the improvements effected by the Corporation in the past. In the course of their proceedings, however, much of the work done of late years in the Town was brought before the members of the Commission, and they considered it expedient to place on record their recognition of the "real and solid progress" which has been made in the path of sanitary improvement, and to describe it in some detail in the opening pages of their report. This desire to give the fullest possible recognition to the progress already made seems also to have actuated the majority of the Commission in framing the recommendations which are embodied in the report; and though this has, perhaps, been productive of some inconvenience in making those recommendations less precise and formal than they would have been if the Commission had confined itself to the strict letter of the law, it has undoubtedly added to the completeness of the report as a record of the work which has been done in the past, of that which has been left undone or done inefficiently and incompletely, and of the measures which, in the opinion of the Chief Sanitary Officer of the Province, and of a former Chairman of the Corporation, are urgently required for the improvement of the sanitary condition of Calcutta.

3. The Lieutenant-Governor in like manner gladly takes this opportunity of again acknowledging the substantial progress in sanitary matters which has been made of late years by the Corporation, and especially by the present body of Commissioners. It is gratifying, too, to observe that this progress has been in great measure effected under pressure of public opinion, to which, as has been pointed out by Mr. Cotton, the Commissioners have shown themselves responsive in a very praiseworthy degree. The Municipal Report for the year 1884-85 is not yet before the Lieutenant-Governor; but he observes that, at a special general meeting on the 26th February 1885, the Municipal Commissioners, in a resolution passed on the occasion, placed on record that that year "is remarkable on account of the sanitary activity displayed by the Corporation," and he has little doubt that the greater public attention which has latterly been devoted to sanitary affairs, culminating in the agitation and memorial of July 1884, has contributed to bring about this commendable result. But while Sir Rivers Thompson desires in no way to detract from the value of the work which the Commissioners have done, it is impossible to ignore the fact, which is brought out clearly by the proceedings of the Commission, by the evidence recorded by it, and by its report, that very much yet remains to be done which must be done to remove the causes of preventible disease. In the Municipal Report for 1883-84, the Commissioners have themselves remarked on the significant circumstance that during that year those wards in which most work was done by the Bustee Department (including the special establishments employed for surface-cleansing) "the death-rates of the year almost universally show a marked improvement, whether as compared with last year or with the decennial mean." Too much stress cannot be laid upon the connection which is established upon the highest sanitary authority, and of which the experience of 1883-84 affords a timely and striking illustration, between a high rate of mortality and those insanitary conditions which have hitherto universally prevailed in Calcutta bustees. The existence of those conditions is fraught with the gravest danger to the public health. Their removal, as experience has shown, is a task well within the competence of the Corporation. So long, therefore, as they are permitted to exist, the Commissioners cannot be held free from responsibility for the continuance within the Town of sources of disease whose effects are not controverted, and whose eradication is within their power. The Government of India have recently recorded their regret that the progress of sanitary reform in Calcutta, both in bustee reclamation and in drainage improvements, has been slow and inadequate, and have used language which practically raises the question whether the inaction of the Corporation has not contributed to the increase of cholera mortality in 1883-84. In a communication reviewing

the municipal administration of that year, an extract from which is forwarded with this letter, it is stated that His Excellency in Council "is not satisfied that the lamentable exacerbation of cholera during the year was not due in a great measure to preventible causes, and trusts that the Corporation will spare neither trouble nor expense to complete those sanitary reforms which experience proves to be the only safeguard against cholera and zymotic disease." To these remarks fresh significance has been added by the connection which the Sanitary Commission has shown to exist between the distribution of cholera mortality and the insanitary condition of various wards of the city. The Lieutenant-Governor feels that there is an absence from your present letter of any indication that the Commissioners have adequately appreciated the importance of this question.

4. The Commissioners have expressed the opinion that, in the absence of a distinct finding by the Commission in the precise terms of the section under which it was appointed, the recommendations embodied in the report "are not such as are required to be carried out under the provisions of section 29 of Act IV (B.C.) of 1876." It is satisfactory to the Lieutenant-Governor to be able to recognise that, as regards some of the more important of those recommendations, the Commissioners themselves have taken, or propose to take, a definite course of action. For the rest, he understands the Commissioners to mean that, under the form of the report, there is no legal power to enforce what they do not wish to carry out, notwithstanding the recommendations of the Commission. Without accepting this interpretation of the position as applicable in all respects, the Lieutenant-Governor will not, for the present, enter upon any discussion of it, as he trusts that the good sense and voluntary action of the Commissioners will relieve him of the ungrateful duty of having recourse to compulsory measures either under the existing law or in course of the legislation which it is his intention to undertake.

5. The Commission, as already mentioned, was actuated by a desire to avoid the appearance of unnecessary fault-finding, and at the same time to include in its report a complete account of the sanitary requirements of the Town. These objects, commendable in themselves, have not been attained without some sacrifice of simplicity and directness. The 37 recommendations embodied in the report are of very different degrees of importance and urgency; some of them appear to travel considerably beyond the strict bounds of the enquiry; some would necessitate changes in the law which, however desirable in themselves, it was not in the power of the Corporation to make; while many of them are wanting in precision and definiteness. The Lieutenant-Governor does not propose, therefore, to discuss them all in detail, but will confine himself to the consideration of those to which he attaches primary importance, and in respect of which the action of the Commissioners appears to him to be incommensurate with the interests involved.

6. Sir Rivers Thompson has at no time desired to set up an abstract standard of ideal perfection to which the Corporation should be required to attain, and the question proposed for the consideration of the Commission was whether the progress actually made by the Commissioners was such as Government had a right to expect, having regard to the admitted defects in the sanitary condition of the Town, and to the resources placed at their disposal by law. In connection with this last point, the Lieutenant-Governor regrets to find no reference in your letter to the important subject of finance, which is discussed in paragraphs 139 to 142 of the Commission's report, and which, for obvious reasons, underlies the whole of its more important recommendations. In settling their budget for 1883-84, the Commissioners rejected the proposals of their executive that the house-rate should be fixed at the maximum of 10 per cent., and reduced expenditure by 3½ lakhs of rupees, of which Rs. 2,93 000 was cut out of the estimates for the various conservancy departments. It appears from paragraph 89 of your letter that, for the current year, the house-rate has again been fixed at its former figure of 7½ per cent. Under these circumstances, the Lieutenant-Governor is unable to avoid the conclusion that the resources at the disposal of the Commissioners have not been utilized to the utmost, and he cannot regard the plea of want of funds, which has been advanced in respect of at least one most important recommendation—the freeing of the public latrines—as valid.

The great difficulty of securing for the Corporation an income which shall be adequate to meet the requirements of the Town of Calcutta is fully recognized; and referring to the report of the Octroi Committee, and the views of the Commissioners regarding it, there seems to be some reason to fear that the prospect of securing a large revenue from this source is not so promising as was originally anticipated. The Lieutenant-Governor, however, has been unable to come to a final decision upon this question; but, in the meantime, I am to point out that the present action of the Commissioners in adhering to an inadequate standard of taxation in the face of the most pressing sanitary emergency, the existence of which is unquestioned, and which cannot be dealt with without increased funds, appears to the Lieutenant-Governor to be scarcely defensible. The Municipal Commissioners of Calcutta have the power to do more than they are doing in the way of sanitary improvement; and the Lieutenant-Governor can only give emphasis to the forcible words of the Government of India, that they "should spare neither trouble nor expense" in bringing the required sanitary reforms to completion.

7. With regard to many of the recommendations of the Commission, the Commissioners are, the Lieutenant-Governor is happy to observe, doing all that is required; and although in some cases their operations may fall short of the proposals, Sir Rivers Thompson readily admits that in matters of detail a large measure of discretion must be allowed to the responsible officers of the Corporation, whose hands the Commission was anxious not to tie. Among these proposals may be mentioned recommendation No. II, that an addition of from 5 to 10 per cent. be made in the establishment for cleaning the sewers, with a view to the more frequent examination of the pipe sewers; Nos. III and IV, that the connection of houses and surface drains with the sewers be pushed on more rapidly, and that the supervision of house-drainage be improved; Nos. V and VI, that the underground system of drainage be extended to Hastings, and that the drainage of Baug Bazar be taken into early consideration; No. XIV, that section 238 of the Act, which prohibits the construction of latrines, &c., within 50 feet of a public tank, be more strictly enforced; No. XVII, that the river water used at the bathing platforms be periodically analysed; and Nos. XXVI and XXVIII to XXXIV, which relate to increases proposed in various branches of the Engineer's Department. The Commissioners are unable to give effect to recommendation No. VII, that the Mahratta Ditch be obliterated, because the Ditch is at present the property of Government. They have, however, some time since submitted proposals on the subject, and orders will be issued on receipt of a report from the Commissioner of the Presidency Division. In some other cases, such as recommendations Nos. XV and XVI, that some restriction be placed on making excavations and on the sinking of wells, an amendment of the law is required, and this the Lieutenant-Governor will be prepared to undertake. A similar remark applies to another matter which is referred to at some length in the Commission's report, but which has not been embodied in any specific recommendation. This relates to the condition of the gowalla-bustees and towsheds. The Commission endorse the remark made by the Commissioners in their last annual report, that "the cattle-sheds of all kinds and their filthy surroundings are perhaps now the most obtrusive nuisance in the Town;" and the Lieutenant-Governor, on the evidence before him, is unable to resist the conclusion that much of the disease which prevails in the Town owes its origin directly to the tainted milk which is sent out daily from these places to all parts of the metropolis. It seems probable that the powers conferred by the present law are insufficient to ensure proper reform without friction and possible resistance in a court of law, and though immediate action is impracticable, the Lieutenant-Governor will be quite prepared to take the necessary measures, when the Municipal Act comes under revision in the next session of the Legislature, for making owners as well as lessees responsible for the condition of these sheds. It is possible that similar measures may be found desirable in the case of ordinary bustees also. In all the above points, and in some others which need not be more particularly referred to, the Lieutenant-Governor is prepared to accept the action which it is stated in your letter the Commissioners have taken, or are about to take, as more or less completely satisfying the recommendations which

do not ~~entitle~~ entitle them. To these I am now desired to invite the attention and ~~urge~~ of the Corporation, in the hope that closer examination may convince the Commissioners of the necessity of dealing with them in a more prompt and energetic manner.

8. The first of these relates to the group of recommendations which deal with the unfiltered water-supply. The Commission recommended (No. I) that unfiltered water be laid on to as many sewer summits as possible with a view to the more effectual flushing of the pipe sewers; (No. XI) that more rapid progress be made in the distribution of unfiltered water in the principal streets; (No. XIX) that, wherever possible, privies should have unfiltered water laid on, and be connected with the sewers, and (No. XXII) that zemindari latrines be connected with the sewers and with the water-supply. With reference to this, it is remarked that the only obstacle to the more rapid development of the use of unfiltered water is that "the size of the pipes for its distribution is insufficient to enable a full use to be made of the supply of water which the new engines can pump up." The strain on the unfiltered pipes at certain hours is even now greater than they can fully meet, and it is urged that to extend the supply further will only weaken the pressure until some of the main pipes are taken up and replaced by larger ones. Mr. Kimber's evidence before the Commission throws some light on the present position of this matter. In his examination by the Chairman, he explained in some detail how the then existing supply of unfiltered water was disposed of, and how it was proposed to distribute the increased supply which has since become available. It appears that since April 1884 none but unfiltered water has been used for street watering, and that only one municipal latrine was connected with the filtered supply. He also stated, however, that the present system of pipes provides only for connections with 15,000 private privies, which is about one-half the entire number; and that it was proposed to use rather less than 300,000 gallons a day for flushing pipe-sewers. With regard to the latter purpose, which Mr. Kimber stated was, in his opinion, the principal boon of the increased supply of unfiltered water, it is nowhere mentioned what quantity has hitherto been used, so that it is impossible to make any comparison or estimate to what extent the recommendations of the Commission have been complied with. With regard to privy connections, however, Mr. Kimber has estimated that only those privies will be supplied with water which are on the lines of unfiltered pipes, and that to supply water to the whole of the privies, and to flush all pipe-sewers, another set of pipes would have to be laid down, with perhaps some increase also to the pumping power. It appears to the Lieutenant-Governor that the expediency of carrying out some such scheme should receive the early attention of the Commissioners. The scheme which has just been completed, with the construction of the pumping-station at Mullick's Ghât, was sanctioned in 1881 at an estimated cost of Rs. 3,68,925, and although the actual outlay is likely to exceed this by rather more than a lakh of rupees, there seems no reason to doubt that the benefits which it has conferred on the Town are well worth the money. This scheme, however, at least so far as privy connections are concerned, only provides for the wants of half the Town; and the Commissioners will, the Lieutenant-Governor trusts, concur in the expediency of extending it to the other half, which includes many of the northern wards, at the earliest possible date. When the works for the increased filtered supply are completed (and it is understood that these are being pushed on with energy), some 600,000 gallons per diem of unfiltered water, which, under Mr. Kimber's scheme, are now used for the bathing platforms, will be set free. This quantity is capable of serving 10,000 privies, or two-thirds of the number remaining unconnected; and the Lieutenant-Governor thinks it could not be used to better purpose. It will not be possible, however, to do this until a more adequate system of piping has been laid down. From a report in the papers, it appears that, at a recent meeting of the Town Council, a resolution was adopted to the effect that "pipes of sufficient dimensions be laid down for the distribution of unfiltered water where it is most wanted." No official communication regarding this matter has reached the Lieutenant-Governor, but if the report is correct, it indicates that

the matter is receiving the attention of the Commissioners, Sir Rivers Thompson would be glad to be informed of any action which the Commissioners may have taken in the matter; and he desires that they may be informed that he will readily accord his support to any well-considered scheme for the extension of the unfiltered supply, so as to bring it within the reach of at least the great majority of the private privies and zemindari latrines.

9. The next point to which the Lieutenant-Governor finds it necessary to draw attention is the filling of foul tanks. The recommendations of the Commission with regard to tanks are (No. XII) that foul tanks be filled up as fast as possible under the present system, and (No. XIII) that those foul tanks which cannot be filled up at once be de-watered and guarded in the hot season. These recommendations do not seem to have received the consideration which their importance demands. The first of them has been grouped in your letter with a number of recommendations regarding the water-supply extensions, with which it has only an indirect connection, and appears to have escaped the attention of the Commissioners who have made no remarks respecting it. With regard to the second, you observe that "it is a matter of detail which can only be settled in the case of each tank on the report of the Health Officer, and that the Commissioners are not in favour of promiscuously de-watering all the tanks in Calcutta during the hot weather, while there is so great a dearth of water as at present." The Lieutenant-Governor is unable to find in the Commission's report any recommendation that all the tanks in Calcutta should be promiscuously de-watered. Their recommendations refer only to *foul* tanks, i.e. to the 70 or 80 tanks which are said to have been condemned by the Corporation and are to be filled up. The table showing the analyses of water taken from 28 of these tanks, which is given in paragraph 70 of the report, is too striking to require detailed comment. The Lieutenant-Governor considers it vastly preferable that the people of the locality should be put to some small temporary inconvenience by the immediate de-watering of these tanks than that they should be allowed to have free access to the liquid poison which they contain. He must therefore request the Commissioners to re-consider carefully the recommendations relating to these foul tanks. He scarcely thinks that any want of legal power to enforce the recommendation of the Commission on this point could ever be justifiably pleaded in the presence of so enormous an evil.

10. The Commissioners appear to have missed the essential point of recommendation No. XVIII, which is to the effect that at least 75 bathing platforms in all be constructed before the end of 1885-86. It is said that 28 bathing platforms had been constructed before the 31st March last, and that sites have been selected for 30 more, and "this will raise the number to 58, or not far short of the number recommended by the Commission." This appears to proceed upon the assumption that the number (75) mentioned by the Commission represents the full number which would be finally sufficient for the wants of the Town, and to which the Corporation should eventually work up. This assumption is quite erroneous. The Commission expressly state that this number, which they take from an estimate framed by the Chairman, is a *minimum*; it is not the number that will ultimately be required, but merely the number which should, in their opinion, be constructed before the end of the current year. The object of constructing these platforms is to check the habit of bathing in the water of foul tanks and wells; and as these latter are rendered inaccessible, it is clear that the provision of the former must be continuously increased. The Commission have estimated the cost of a platform at Rs. 1,200 on an average; and to comply with their recommendation and construct 17 more within the prescribed period, in addition to those for which sites are said to have been selected, would cost in all Rs. 56,400. I am desirous to request that the Lieutenant-Governor may be informed distinctly whether the Commissioners are prepared to carry out these works completely before the end of the current official year.

11. The Lieutenant-Governor has perused paragraphs 27 and 28 of your letter with much regret. These paragraphs discuss the recommendations of the Commission on the very important question of latrines. It has been recommended that the public latrines be made free; that more public

off a separate portion of the existing latrines for the exclusive use of women. This proposal, I am to observe, is at variance with the opinion of the Commissioners the members of which laid much stress on the entire separation of the women's latrines from those of the men. The Lieutenant-Governor is not disposed, however, to dwell upon this point, which seems to be of less immediate importance, for the reason that the Commissioners have agreed to consider the propriety of constructing separate latrines for women, should the results of the experimental measure which has been resolved upon prove that the want actually exists.

12. It is chiefly, therefore, with regard to the abolition of the charge for latrines, and the provision of more latrines, that the Lieutenant-Governor feels himself compelled to disagree with the Commissioners. It is observed in your letter that the Octroi Committee have also recommended that these public conveniences should be made free, and that the question can be more conveniently discussed in connection with the report of that Committee. This statement was probably lost sight of when your letter No. 528, dated 26th ultimo, was written; for that letter, which purports to communicate the views of the Commissioners regarding the report in question, contains no reference to the subject of freeing the latrines. The objection of the Commissioners to taking this step appears to rest on the ground that the latrines were erected from capital as a self-supporting work, and have hitherto only paid a very moderate percentage on the outlay. The Commissioners, therefore, it is said, "do not see their way to freeing them except as a set-off against other funds placed at their disposal." On similar grounds they demur to constructing more public latrines except as a charge against capital. The Lieutenant-Governor is constrained to say that this view appears to him to involve a complete misconception of the duty of the Corporation in the matter of providing latrine accommodation. There are large classes of persons resident within the Town whose circumstances will not permit them to pay any charge, however small, for the use of a latrine; these people have no alternative, in the absence of free accommodation, but to resort to the lanes and open spaces in the neighbourhood of their own houses; nor is it possible to prevent this by any measures of practical severity. If, therefore, surface-fouling is to be stopped at all—and stopped it must be if Calcutta is ever to attain its proper sanitary standard—an adequate supply of free public latrines, to which the poorest classes may have access without any charge whatever, is an absolute necessity. So far from admitting that the freeing of the latrines may properly be deferred because they have hitherto paid only a moderate percentage on their capital cost, the Lieutenant-Governor regards it as quite indefensible that they should be expected to yield any return whatever. But even if this were not the case, the argument with which the Commissioners seek to justify their disregard of the recommendations of the Commission would appear singularly unhappy in the face of the fact that they have for years past derived a handsome annual profit from the operations of the night-soil department. From a statement given in the appendix to the Commission's report, it seems that, taking latrines and night-soil fees together, the receipts have exceeded the gross expenditure by upwards of 6½ lakhs of rupees since 1876; that in only one year (1877) was there a deficit; and that during the five years ending 1883-84 the annual profit has averaged Rs. 1,22,011. The impropriety of working this department so as to bring in a profit has been represented by the Chairman on more than one occasion, and has also been admitted by the Commissioners themselves. It is difficult therefore to reconcile their accepted views upon this question with their present hesitation to apply a small part of this profit to remove a very grave defect in their administration of the department from which it accrues. Sir Rivers Thompson trusts therefore that you will move the Commissioners to reconsider their position in respect of this matter, and invite them to take very early steps to place the latrine accommodation of the Town on a satisfactory footing. The expediency of forming the receipts of this department into a separate fund, which should be applicable only to meeting the cost of the work done, and not be available for general expenditure as an asset of the General Municipal Fund, has already suggested itself to the Lieutenant-Governor;

doubt considerably influence the course of impending legislation for sion of the Municipal Act of Calcutta.

13. Finally, the Lieutenant-Governor desires to direct the particular attention of the Commissioners to the remarks of the Commission regarding the appointment of a whole-time Health Officer, and the organization of a proper Health Department. It is the absence of organization and defective supervision which, in the opinion of the Commission, constitute the great defect in the present municipal arrangements. "There is an establishment here, and an establishment there; an Inspector here, and an Inspector there; an infinity of work in different hands and under different guidance; but all the work is done in a fragmentary and unsystematic way." It is stated that on the termination of the present temporary arrangement with Dr. O'Brien, which has now lasted for upwards of a year, the Commissioners will select a permanent whole-time Health Officer. The Lieutenant-Governor is glad to receive this intimation, and he considers that the Commissioners will by that time have gained sufficient practical experience of the subject to justify them in proceeding at once with the organization of a complete Health Department, to which all departments concerned with conservancy and sanitation shall be subordinated, without waiting further to ascertain the views of Dr. O'Brien's successor.

14. The Commission has referred, in the concluding paragraphs of its report, to the desirability of amalgamating the Town with the Suburbs, or at least with a portion of the latter. This question has latterly been pressed upon the attention of Government from many quarters, and, as the Commissioners have already been informed, the Lieutenant-Governor has appointed a Special Committee to consider the proposal, and to lay down the lines on which the amalgamation should proceed. Such a measure will require legislation, and as the experience of the past nine years has shown that the present Municipal Act of 1876 is in need of amendment in a variety of points, it has been thought desirable that the entire constitution of the municipality, its powers, duties, and responsibilities, should be brought within the purview of the Committee. A large measure of this kind necessarily involves questions of great difficulty and complexity, and the Lieutenant-Governor feels that the Commissioners have it in their power to render very valuable assistance to the Committee, by indicating the difficulties which they have had to contend against in the past, and the reforms which their experience shows to be necessary in the future. Some of the more important of these reforms, on which the Lieutenant-Governor believes that it may be necessary to insist by specific legislative enactment, have been indicated in the foregoing paragraphs of this letter. It is manifest that the greatest care will be required in working out the details of the measure, and that ample time must be allowed for the determination of the numerous questions involved, and for the ventilation of the substantive changes proposed to be made in the law. The Lieutenant-Governor is confident that the Commissioners will not allow this interval to be wasted, but that they will endeavour to advance the good work of reform by prosecuting, with the utmost diligence, all those primary municipal improvements of which Calcutta even yet stands in such urgent need.

Extract from a letter from A. MACKENZIE, Esq., C.S., Secretary to the Government of India, Home Department, to the Secretary to the Government of Bengal, Municipal Department—No. 41, dated Simla, the 19th May 1885.

PARA 2. The interval which has elapsed between the close of the period to which the Report relates and the date of its receipt by the Government of India, is such as to render it of little practical use to enter into any detailed review, especially as the whole question of the conservancy of the town is now under the consideration of the Local Government in connection with the report of the Commission appointed to enquire into the matter. I am to request that a copy of this latter report may be forwarded at an early date, with a copy of the orders of the Bengal Government thereon.

3. As regards the measures undertaken during the year 1883-84 for the purpose of improving the sanitary condition of the town, the Governor-General

under report in dustee reclamation was so slow, and that the work done in the direction of improving the drainage showed a considerable falling off. The decrease in the expenditure on vaccination in Calcutta is also to be regretted, especially in view of the fact (stated in the Resolution*) that the mortality from small-pox was higher than in any of the three preceding years. His Excellency in Council is moreover not satisfied that the lamentable exacerbation of cholera during the year was not due in a great measure to preventible causes, and trusts that the Corporation will spare neither trouble nor expense to complete those sanitary reforms which experience proves to be the only safeguard against cholera and zymotic disease.

* Paragraph 21.

No. 954, dated Calcutta, the 1st April 1885.

From—COLMAN MACAULAY, Esq., Secretary to the Government of Bengal, Municipal Department,

To—The Chairman of the Corporation of the Town of Calcutta.

I AM directed to invite attention to Government letter No. 290, dated the 31st January last, with which was forwarded, for the consideration of the Commissioners, a copy of the Report of the Commission which was appointed under section 28 of Act IV. (B.C.) of 1876, and to request that the Lieutenant-Governor may be favoured, as soon as possible, with the result of the Commissioners' consideration of this report.

No. 295, dated Calcutta, the 4th May 1885.

From—H. L. HARRISON, Esq., c.s., Chairman of the Corporation of Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

IN reply to Government order No. 954 of 1st ultimo, asking for a report of the result of the consideration by the Municipal Commissioners of the report of the Commission appointed under section 28 of the Municipal Act, I have the honour to submit the following report.

2. The Government letter forwarding the report of the Commission was at once laid before the Town Council, and by that body ordered to be laid before a Special General Meeting, which was convened for the 26th of February last. At that Meeting the following resolutions were passed *nem con* :—

1st.—That this Meeting views with satisfaction that the report of the Commission has now placed it beyond doubt that there has been great and solid improvement in the sanitation of the town during the incumbency of the Commissioners constituted by Act IV (B.C.) of 1876, and especially during the last three or four years.

2nd.—That the evidence taken by the Commission has made it clear that, so far from there having been any relaxation of effort on the part of the Commissioners since the memorial of 1883, there have been additional establishments sanctioned and additional improvements effected, and the year 1884 is remarkable on account of the sanitary activity displayed by the Corporation.

3rd.—That in the absence of any distinct finding by the Commission that the cleaning and the conservancy of the town are defective to an extent likely to be prejudicial to the health of the inhabitants of the town, or of any part thereof, and in the absence of any definite statement of further provision to be made for the cleaning and the conservancy of the town up to the end of the current year, or the year following, and of an estimate of the cost of such further provision, the Commissioners are justified in considering that the various recommendations contained in the report are not such as are required to be carried out under the provisions of section 29 of Act IV (B.C.) of 1876.

4th.—That while holding the view referred to in the preceding resolution, the Commissioners are anxious to treat the recommendations of the Commission with the respect due to such an eminent authority as the Sanitary Commissioner of Bengal and to Mr. Beverley, the late Officiating Chairman of the Corporation, and they accordingly resolve to send the report to the Town

Committee and the Water Supply Extension Committee, with a request that they will carefully consider the portions of it which concern them respectively, and report to the Commissioners in Meeting such of the recommendations as they may consider necessary.

5th.—The Commissioners think it much to be regretted that the majority of the Commission refused to examine the witnesses Mr. Cotton was prepared to produce, as referred to in paragraph 9 of his minute of dissent, and consider it a great defect in the enquiry that the evidence of native witnesses was not taken.

6th.—The Commissioners concur entirely in the minute of dissent recorded by Mr. Cotton, and beg to record the expression of their deep gratitude to him for his invaluable services to the town during the recent enquiry.

3. It will be seen that it was the opinion of the Commissioners, both from the phraseology of the concluding words of paragraph 18 of the Report, from the marked absence of any specific estimate such as is contemplated in sections 28 and 29, and from the want of any distinction in the report between such recommendations as were manifestly outside the legal powers of the Commissioners and such as might have been brought within those powers, that it was the intention of the majority of the Commission to restrict themselves to advice, relying on the Corporation "to receive their criticisms and suggestions in the spirit in which they are offered, and to give them that fair and careful consideration to which they may be entitled" (paragraph 10).

4. It is in this spirit that the various recommendations of the Commission have been considered in Committee Meetings, and the following is a statement of the results of these deliberations.

5. The recommendations of the Commission, as recapitulated at the end of the report, are 37 in number, of which the following recommendations advocate a policy which the Commissioners entirely accept, and will do their best to give effect to so far as circumstances may admit of:—

I.—That unfiltered water be laid on to as many sewer summits as possible with a view to the more effectual flushing of the pipe sewers.

VIII.—That greater economy be exercised in the use of filtered water for road watering and flushing drains and latrines.

X.—That the extension works be pushed on as rapidly as possible.

XII.—That foul tanks be filled up as fast as possible under the present system.

XIX.—That wherever possible privies should have unfiltered water laid on and be connected with the sewers.

6. The only obstacle to the more rapid development of the use of unfiltered water, as suggested in the above recommendations, is that the size of the pipes for its distribution is insufficient to enable a full use to be made of the supply of water which the new engines can pump up. The unfiltered water has year by year been more and more made use of for watering streets, and it is also laid on to all the bathing platforms and night-soil depôts in the town. When street watering is in full swing, the drain on the unfiltered water pipes is even now greater than they can fully meet, and further extension will only weaken the pressure, until some of the main pipes are taken up and replaced by larger ones.

7. On the other hand, when the water is not being used for street watering, there is an abundant supply for all other purposes, and there would be enough to spare for other uses, such as those indicated above. The problem before the Commissioners is how to extend the use of the unfiltered water in such a manner as to close these new outlets during the hours of street watering, and only open them at other hours. Some of the pipes are now being replaced by larger ones, and the Commissioners must see the effect of this measure and of the filtered supply extension before determining how far it will be practicable to go on carrying out these suggestions.

8. The above considerations involve the answer of the Commissioners to suggestions, No. XI that more rapid progress be made in the distribution of

licable to give effect to it till either the filtered supply is extended or till the unfiltered pipes are enlarged. The fact that the same pipes, which proved of sufficient dimensions two or three years ago, are now found too small, shows in itself how much the use of unfiltered water has been already extended.

9. The suggestions connected with the budget for 1885-86 were unfortunately not in the hands of the officers of the Corporation, when the budget was in the first instance prepared, owing to the delay in the submission of the report; but the Commissioners as usual appointed a Special Committee to revise the budget, and this Committee carefully considered the recommendations of the Commission as they bore on each grant.

10. Recommendation No. II is that an addition of from 5 to 10 per cent. be made to the establishment for cleaning the sewers with a view to the more frequent examination of the pipe sewers. The number of mehters has been increased from 28 to 30 and of dhangurs from 102 to 110, and the total grant for sewer cleaning establishment from Rs. 25,956 to Rs. 27,312, an increase of 5 per cent. This follows an increase of about 40 per cent. sanctioned two years before.

11. Recommendation III is that the connection of houses and surface drains with the sewers be pushed on more rapidly; and

Recommendation IV that the supervision of house drainage be improved.

These two recommendations may be taken together. It has for years been the policy of the Commissioners to push on connections as fast as possible, but the check on progress is the capability of the supervising establishment to cope with the work. It must be borne in mind that the progress has already much increased of late years, as the report of the Commission shows. In the seven years 1873-80 the number of connections rose from 3,291 to 11,694, or at the rate of 1,200 per annum; while in the 3 $\frac{1}{2}$ years from 1881 to September 1884 the number had been raised to 20,149, or at the rate of 2,254 per annum.

12. The Commissioners have therefore, for the current year, re-organized the department of house drainage, the number of inspectors has been increased from four to six, and a special supervisor, an ex-Assistant Engineer, has been appointed and put over it. The budget grant has been raised from Rs. 6,254 to Rs. 9,786.

13. Recommendation XXV is that the supervision in the Night-soil Department be improved, but this summarises very briefly the careful review of the night-soil arrangements, contained in paragraphs 96 to 98 of the report, and the comparison of them with the similar arrangements in force in Bombay. The Commissioners have during the year united the Bustee, Conservancy and Night-soil Departments, and placed them both under the immediate control of the Health Officer. The working staff consists of 1,200 mehters and 300 dhangurs, and the supervising staff, exclusive of the Health Officer, of a Superintendent on Rs. 400, four Inspectors on Rs. 120 to Rs. 180, four sircars, nine jemadars, 18 mate jemadars and 45 peons. The Health Officer considers this supervising establishment to be sufficient, and the Commissioners believe that such inefficiency as still exists is due rather to defects in the construction of privies than to deficient supervision. In one sense every intelligent occupier is made by his own interest an amateur supervisor. Thus though the alterations made in this direction scarcely go so far as the report of the Commission recommends, the Commissioners must respectfully express their opinion that they go as far as the requirements of efficiency reasonably necessitate. Should experience show that this is not the case, they will be re-considered.

14. Recommendation XXVI is that better provision be made for the removal of cow-dung, either through the sewers or by carts. About half of the cow-sheds are connected with the sewers, as are the model cattle sheds erected by the Commissioners last year in Jorabagan and Kolabagan; but for the remainder, which are unconnected, the provision has been increased as recommended, and the budget allotment raised from Rs. 3,193 to Rs. 4,562.

15. Recommendation XXVIII is that the road scraping establishment should be increased by 20 per cent. The Engineer at first asked for an increase

looking to the recommendation of the Commission, were prepared to sanction but subsequently the Road Department, guided by the experience of the last year, has reduced its claim to Rs. 20,000 only. The rule has been introduced of utilizing the street-watering cattle for removing road scrapings after heavy rain, the only time when the powers of the establishment are at all taxed, or when, the Commission report, the work is insufficiently done, and the Superintendent of Roads and Conservancy has assured me that the needs of this department are fully provided for.

16. Recommendation XXIX is to increase the road sweeping establishment by 20 per cent. The Engineer in his budget asked for an increase of establishment from 410 men to 425, and from 52 boys to 60; also of melters from 24 to 25. All these increases the Budget Committee sanctioned: they are much less than 20 per cent. it is true, but they are all that the responsible head of the department considered necessary.

17. Recommendation XXX is that the establishment for removing horse droppings be increased. The budget provides a grant of Rs. 7,362, as against Rs. 6,024 for the previous year.

18. Recommendation XXXI is that the number of carts and cattle be increased. The budget of 1885-86 sanctions 452 carts, as against 402 carts for 1884-85, and 482 cattle as against 422.

19. Recommendation XXXII is that the railway platform accommodation be increased and improved. A special grant of Rs. 1,876 for this purpose was made in 1884-85, and Rs. 3,000 have been sanctioned for the same object in 1885-86.

20. Recommendation XXXIII is that the rolling stock of the railway be increased. An allotment has been made for an additional engine, 10 additional refuse wagons, and 4 additional ballast wagons for the year 1885-86.

21. Recommendation XXXIV is that the supervising agency of the Roads and Conservancy Department be strengthened.

22. The budget provides for an Assistant Superintendent on Rs. 200 a month, who has been already entertained. The Commissioners prefer this to the alternative suggestion of dividing the town between two Superintendents, as it unifies control and obviates the inconvenience of double reports, and in some respects of a double procedure.

This completes all the recommendations connected with the budget.

23. Recommendations V and VI are that the underground system of drainage be extended to Hastings, and that the drainage of Baug Bazar be taken into early consideration. In both of these the Commissioners fully concur. The scheme for the underground drainage of Hastings was ready two or three years ago, and was only not sanctioned in consequence of the unfounded objections to the system taken by the residents, who were misled by the attack upon the drainage system which was inaugurated in the cold weather of 1882-83.

24. The report of the Commission has contributed to dissipate this prejudice, and the residents of Hastings have withdrawn their objection: the scheme for its drainage was therefore sanctioned by the Commissioners on the 7th of February 1885 and is now being carried out by the Engineer.

25. The drainage of Baug Bazar has only been delayed by the engineering difficulties incidental to the drainage of so low-lying an area. The Commissioners have never hindered it or opposed it, and the Engineer has just submitted a project for approval.

26. Recommendation XVIII is that at least 75 bathing platforms in all be constructed before the end of the year 1885-86. The number of bathing platforms that were constructed by the end of 1884-85 was 28, and there can be no doubt of the good use which has been made of them and of the manner in which they have been appreciated, specially during the present hot weather. The only drawback is that the demand for the water is so great that it is intercepted by lotahs and gumlahs before it can fill the reservoir, which gets almost empty about 8 or 9 o'clock in the morning. The Health Officer has been already* requested to select 30 more sites for the construction of as many more

* Since this was written the selection has been made, and the sites are now under consideration.

be near the unfiltered supply, and also in a good central locality, and at the same time that it should not be inconveniently situated in the middle of any large plot of ground, in which case the owner usually puts forward a claim to very heavy severance compensation.

27. Recommendation XX is that the public latrines be made free. The Commissioners observe that the Octroi Committee have made the same recommendation, on the supposition that certain additional sources of income will be placed at their disposal. As the latrines were erected from capital as a self-supporting work, and have hitherto only paid a very moderate percentage on the outlay, the Commissioners do not see their way to freeing them, except as a set-off against other funds placed at their disposal. The question can more conveniently be discussed in connection with the Octroi Committee's report now under consideration.

28. Recommendation XXI is that separate latrines be erected for women, XXIII that more public latrines be erected, and XXVII that roads in the north of the town be provided with side-drains. As regards the first of these recommendations, the Commissioners propose to set off a separate portion of the existing latrines for the exclusive use of women, and if this is found by experience to meet a want, the existence of which some Commissioners doubt, the propriety of constructing separate latrines for women will be considered, but the Commissioners would point out that these three recommendations involve expenditure which has hitherto been incurred from capital, and which the Committee think should still be met from that source, as it is not reasonable to place all the burden of improvements on the present generation; but before expenditure can be incurred against capital it is necessary that the capital should be forthcoming. The present policy of the Government is to leave municipalities to their own resources in obtaining capital, and so far as can be gathered from the present outlook, it is very doubtful whether it will be possible to obtain much more money in India on reasonable terms. The Commissioners have in hand many projects requiring capital, to which they are prepared to give favourable consideration as soon as they know that the money will be forthcoming; but the water-supply extension, to which they are already committed, has the first claim on them, and till they have ascertained that sufficient money will be lent them to enable them to complete these works, prudence demands that other schemes should be postponed.

29. Thus far the recommendations of the Commission have been considered in convenient groups: those which remain for consideration are the following:—

Recommendation VII is that the Mahratta Ditch be obliterated. The Commissioners entirely concur in this, but thus far the objection proceeds from Government, as will be seen from the Government letter No. 487 of 25th February 1884.

It is not for the Commissioners to discuss the weight of the objection, but the practical question is whether the ditch should be maintained as a drainage ditch, as it at present is. If the present state of things is to be remedied, it is necessary—*first*, that the Government, which at present owns the ditch, should either bear the expense of piping it, or transfer the proprietary right to the Commissioners; *secondly*, that those who will benefit by it should pay the cost of the work. The houses which drain into the ditch are almost exclusively houses in the Suburbs, and under section 88 it is lawful for the Commissioners to impose a drainage rate of 2½ per cent. on all such localities as the Local Government may notify under section 168. If Government will make over the Mahratta Ditch to the town, and will authorize the imposition of a drainage rate on all houses draining into it, by a notification under section 168, the recommendation of the Commission can be carried out.

30. Recommendation IX is that more stand-pipes be erected in bustees: this policy the Commissioners are prepared to adopt as soon as the extension works are ready. Till then any augmentation in the number of stand-pipes would only weaken the already inadequate pressure.

agree in the principle embodied in this recommendation, and already give effect to it in certain cases, but it is obviously a matter of detail which can only be settled in the case of each tank on the report of the Health Officer. The Commissioners are not in favour of promiscuously de-watering all the tanks in Calcutta during the hot weather while there is so great a dearth of water as at present.

32. Recommendation XIV is that section 233 of the Act, which prohibits persons constructing a latrine, urinal, &c., within 50 feet of a public tank, should be more strictly enforced. The Commissioners were not aware that the rule was not already strictly enforced. If there is any relaxation it is not in consequence of orders from them, or of any policy in that direction, but solely from the practical difficulty which the Health Officer experiences in giving effect to the rule. That the enforcement of it should be left to the Health Officer is the best guarantee that all reasonable energy is shown in enforcing it.

33. Recommendation XV is that some restriction be placed on making excavations. Under the present law the Commissioners have the power to require the owner to fill up an excavation if they consider it insanitary, but they have no power to prevent its being made. This recommendation involves an amendment of the law.

34. Recommendation XVI.—The same remark applies to the next suggestion to prohibit the sinking of wells.

Recommendation XVII is that the river water used at the bathing platform be periodically analysed.

The river water is already analysed once a week, and the attention of the Analyst has been drawn to paragraph 73 of the Commission's report.

35. Recommendation XXIV is that more urinals be erected, and the Commission express an opinion that the difficulty in obtaining sites is much exaggerated. This is quite contrary to the experience of the majority of the Municipal Commissioners if by 'sites' is understood places where urinals are needed, and not places where a urinal could be put up, but where it is not needed. The officers of the Corporation are constantly selecting sites for urinals, and in nine cases out of ten the project has to be abandoned owing to the force of the objections raised. Recommendations to put up additional urinals are frequently received either from the people who require them, from the Ward Commissioners, or from the officers of the Corporation, and each case has to be considered on its merits. Unfortunately the quarters whence most of the applications come are the business quarters of the town, where sites are most difficult to be found.

36. Recommendation XXXV is that all the surface conservancy be placed under an Executive Health Officer. This question came under the consideration of the Commissioners during the year 1884, and as a consequence the whole of the bustee conservancy has been placed under the Health Officer, but on that officer's recommendation the road conservancy has been left with the Engineer. The Commission would transfer to the Health Officer the sweeping of roads, cleaning surface drains, and removing town sweepings; the scraping, watering, and repair of roads they would leave to the Engineer. This is a very difficult question, and the arguments in favour of and against the change are numerous. Some Commissioners are in favour of it, others (the majority; are opposed to it) but it seems evident that the line proposed to be drawn by the Commission, by which the same road is to be swept by the Health Officer's establishment, but scraped by the Engineer's staff, is to say the least a very artificial one, and it could scarcely fail to involve a waste of supervision. On the termination of the present temporary arrangement with Dr. O'Brien, the Commissioners will have to select a permanent whole-time Health Officer, and as soon as he has become familiar with his work, they will ascertain his views on the subject.

37. Recommendation XXXVI proposes to take away the supervision of the registration of births and deaths from the police, and transfer it to the Overseers. The Health Officer, who has been consulted on the subject, thus writes—

"It would be, in my opinion, a mistake to transfer registration from the control of the police to that of the Municipal Overseers, either of the Conservancy or Bustee Departments,

place, there is not an Overseer in each ward, only one to each of the eight divisions, into which the town is divided for conservancy purposes; in the second, the attention of the Overseer and his subordinates is entirely directed to matters relating to conservancy, drainage, roads, &c., and not to matters relating to the people themselves. In the third place, he has absolutely no time to devote to extra work like registration. On the other hand, in each ward there is a Police Inspector working with a staff of subordinates, far more intelligent than the subordinates in the Conservancy Department, and the attention of the Inspector and of the whole establishment under him is directed towards the people of the ward and not to the ward itself, so that they would be more likely to hear of domestic occurrences, such as births and deaths. Under the circumstances, there would be certainly no gain, but a certain deterioration in registration, if the proposed change were made.

"Lastly, I may say that the Registrars of the 18 thanas make reports direct to the Health Officer, and are amenable to his orders in matters of registration, when they are forwarded through the Deputy Commissioner of Police."

The Commissioners are disposed to concur in this view.

38. The only remaining recommendation is XXXVII, that the suburbs be placed under the same municipal administration as the town. The Government has specially asked the opinion of the Commissioners on this question in forwarding them the report of the Octroi Committee, and it would be more convenient to postpone their remarks on this subject.

39. The Lieutenant-Governor is no doubt aware that owing to the repayment of 25 lakhs of 6 per cent. debentures, on which 2 per cent. sinking fund was also payable, the expenditure under the General Fund has in 1885-86 received relief to the extent of two lakhs of rupees. At the same time, owing to the re-assessment of large portions of the town during the past year, the house-rate at $7\frac{1}{2}$ per cent. is expected to yield Rs. 50,000 more than in 1883-84. The Commissioners have devoted the whole of this sum ($2\frac{1}{2}$ lakhs) to reinforcing the conservancy establishments and improving the efficiency of the administration generally during the year 1885-86.

40. It seems to them that this is all that they are justified in doing from revenue, as it is not fair to make the existing generation bear all the expenses of such large improvements as are usually constructed from capital funds. What the Commissioners will be able to do from capital must depend on the capital forthcoming, but they much fear that the decision of Government, neither to lend money to local bodies, nor to let them appeal to English markets, will greatly augment the difficulty of obtaining future loans for the improvement of the metropolis.

REPORT OF THE COMMITTEE APPOINTED TO CONSIDER THE PROPOSAL TO INTRODUCE AN OCTROI INTO CALCUTTA.

MUNICIPAL DEPARTMENT.—MUNICIPAL.

Darjeeling, the 29th June 1885.

RESOLUTION.

Read again—

- The Report submitted by the Committee appointed under Government Resolution, dated the 4th August 1884, to consider and report upon the proposal to introduce an Octroi into Calcutta.

Letter to the Chairman of the Corporation of the Town of Calcutta, No. 961, dated the 4th April 1885, forwarding, for the consideration of the Commissioners, a copy of the Report submitted by the Octroi Committee.

Read—

Letter from the Chairman of the Corporation of the Town of Calcutta, No. 528, dated 26th May 1885, forwarding a copy of the Resolutions recorded by the Commissioners upon the above Report.

• The Lieutenant-Governor thinks that it would be convenient to postpone his final decision on the several recommendations of the Octroi Committee until he can deal with the question of the amalgamation of the Town of Calcutta with the urban portions of the Suburbs under one system of municipal government, which is now being enquired into by the Committee recently appointed by Government under Resolution dated the 20th instant. In the meantime, the

Corporation recited in the preamble, be published in the *Calcutta Gazette* for general information. Sir Rivers Thompson takes this opportunity to thank the members of the Octroi Committee for their careful consideration of the question referred to them, and for the report which they have submitted.

ORDER.—Ordered that this Resolution, with the papers indicated above, be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secretary to the Govt. of Bengal.

Report of the Committee appointed by His Honor the Lieutenant-Governor of Bengal to report upon the proposal to levy an octroi in Calcutta.

THE circumstances which led to the appointment of our Committee are recorded in the Resolution of the 4th August of the Government of Bengal and in the preamble thereof. The Hon'ble Baboo Doorga Churn Law, C.I.E., was subsequently added to our number on the representation of the British Indian Association.

We met seven times, and took into consideration the official correspondence and memoranda received from Government. At our first meeting it was ascertained that we were unanimously of opinion that a complete system of octroi,—understanding by the term a cordon of stations or toll houses round Calcutta for the purpose of levying town dues on articles of consumption generally,—was not to be recommended.

2. We found, however, that we were divided in opinion in respect of the propriety of levying an octroi on bulky articles of consumption other than coal the taxation of which was generally disapproved of; the majority were for considering each article on its merits, but the minority, comprising the representative of the Chamber of Commerce, the representative of the Port Commissioners, and the Hon'ble Baboo Doorga Churn Law, C.I.E., were opposed to the introduction of an octroi even in the case of commodities of this class. It appeared, however, that the minority were not equally opposed to the levy of a fee of 2 annas a case on all petroleum brought into the town, partly because this revenue can be raised without difficulty or liability to abuse, owing to the rules which are about to be introduced regulating the transport of petroleum by cart or boat; partly because, if the consignees of petroleum find it convenient to store the article in the town instead of conveying it direct from the riverside depôt to the Railways which take it up-country, there is no injustice (considering the dangerous character of the commodity) in requiring a small fee to be paid for the use made by its owners of the town and its thoroughfares.

3. It will be seen hereafter that this is the only proposal in which any large majority of the Committee are able to concur. As regards levying an income by the method of an octroi on other bulky articles, the majority deprived of the support of their colleagues do not feel justified in pressing their views.

4. The President, however, suggested that articles of general consumption, especially articles of food, might be taxed in other ways, such as by increasing the fees for animals slaughtered at the slaughter-house, and by imposing licenses on the retail sale of food, which would not be open to the objections taken to an octroi, while the incidence of the tax would be eventually the same, in that it would fall on all the consuming classes.

As regards the fees and licenses above mentioned, some members of our Committee expressed a doubt whether the consideration of such modes of taxation fell within the cognizance of an Octroi Committee. A reference was therefore made by the President to the Lieutenant-Governor. His Honour in reply intimated that the deliberations of the Committee should not be fettered by any limitations other than the broad one that no proposal for

5. On receipt of this report the Committee expressed a general approval of the principles on which this proposal was based, and requested the President to lay it before them in a more detailed form, with a rough estimate of the amount which it would yield. The following suggestions were then made for their consideration:—

6. That an income might be raised—

I.—From petroleum; by authorizing the levy of a fee not exceeding 2 annas on each case brought into the town for storage there.

II.—From articles of food consumed in Calcutta; (a) as regards animal food, by levying an additional fee on each animal brought for slaughter to the municipal slaughter-house, no other slaughter-house being licensed either in the town or the suburbs; (b) as regards all other articles of food sold in regular shops,—by imposing a special license fee on such shops; (c) as regards food (other than meat) exposed for sale in markets not in regular shops,—by levying a license fee from the market owner, varying according to the space usually occupied by such vendors.

III.—From tobacco; by requiring a special license fee for its retail vend.

IV.—By authorizing the levy of fees for all offensive and dangerous trades registered under section 297 or licensed under section 298 of the Calcutta Municipal Consolidation Act, 1876, under which section depôts for hay, straw, wood, and coal are registered or licensed.

7. In regard to I, it was proposed (and we unanimously recommend the proposal for sanction) to levy a fee of 2 annas a case on all petroleum brought into the town. Under the system of transport passes it is believed that there will be no difficulty whatever in distinguishing petroleum consigned to the town, from petroleum consigned to the railways or to country boats. In estimating the additional municipal income which would be obtained from the levy of the fee proposed, the best information available is to be found in the statement of Calcutta trade supplied to us by Government from the trade returns of the three years ending 1883-84. These show the imports of petroleum to exceed the exports on an average by 756,000 cases per annum. The fees on this quantity would amount to Rs. 94,000 a year. These figures relate to the Town, the Suburbs, and Howrah, and if the estimate appears unduly high, we may observe that there is every probability that the consumption of kerosine-oil in Calcutta and the adjacent places which draw their supplies from Calcutta has not reached its full developement. We do not recommend that the petroleum destined for Howrah direct should be taxed (see paragraph 25), but a fair proportion of the fees collected should be handed over to the Suburban Municipality.

8. As regards II (a), an additional income can easily and equitably be raised from the consumption of animal food by levying higher fees at the slaughter-house, as follows:—

On the slaughter of each—

					New levied.	Proposed.
					As.	As.
1st class bullock	4	10
2nd ditto	2	6
Calf	1	3
Sheep	2	5
Goat	2	4
Kid	1	2
Pig	4

carcass from the dealer to the butcher, an additional small fee is levied, as well as an anna on the skin if, as is generally the case, it is sold there to the hide merchant.

By this change additional income would be obtained as follows :—

			Number slaughtered in a year.	Additional fee.	Amount.
				As.	Rs.
1st class bullocks	11,000	6	4,125
2nd ditto	70,000	4	17,500
Calves	13,000	2	1,625
Sheep	60,000	3	11,250
Goats	36,000	2	4,500
Kids	24,000	1	1,500
Pigs (say)	4,000	4	1,000
					<hr/> 41,500 <hr/>

Pigs are not now killed at the slaughter-house, but it may be thought desirable that the killing of pigs should be brought under control, and a suitable building constructed at a proper distance from the Tengrah slaughter-house for the purpose. This is the only slaughter-house in use either in Calcutta or the Suburbs, and no new one may be licensed in either of these jurisdictions without the permission of the Municipal Commissioners. There will, therefore, be no difficulty in giving effect to this proposal, though it may be advisable to amend the Municipal Act to some extent so as to prohibit under a penalty the slaughter of animals elsewhere than in a licensed building, excepting animals *bona fide* killed in sacrifice, whether at *kalisthans*, or at the houses of Mahomedans, or at certain specified places.

It was brought to the notice of the Committee, however, that there is a slaughter-house in the South Suburban Municipality, from which a portion of the meat sold in the Kidderpore market is supplied. This might require to be specially dealt with. Also a portion of the extra fees corresponding to the proportion of the meat which is taken to suburban markets should be allotted to the Suburban Municipality.

9. With regard to II (b), the owners of all retail shops now pay license fees according to the following maximum scale .—

				Per annum.
				Rs.
Itinerant hawkers	1
Shopkeepers whose shops are assessed at less than Rs. 10 per month	4
Keepers of <i>permanent</i> stalls at markets and shopkeepers whose shops are assessed at over Rs. 10 a month	12
Shopkeepers whose shops are assessed at over Rs. 25 a month	25
Ditto ditto over Rs. 100 ditto	50

In all trade and profession licenses under the Calcutta Municipal Act, the license is required to be taken out, not on account of the place of business, but by the individual. The permission is personal, and the individual, when he has obtained his license, may remove his business to one shop after another for the year for which his license is in force, as long as the new shop is not of a different class from the old one.

The present proposal is that all shops (i) for the sale of food other than meat, or (ii) for the sale of tobacco, should be licensed by the name or number of the house occupied. The collection of the license fees should be left to the agency employed to collect the fees now imposed under section 75 of the Calcutta Municipal Act, and at the time of payment the two amounts should be added together and demanded in one sum. It might be found desirable to collect the fees quarterly instead of annually in order that the smaller retail vendors might not be driven out of the field by their inability to pay the whole fee before they had had time to recoup themselves by the higher prices which would necessarily follow. A personal license would then, under section 75, be

					For the sale of tobacco.	For the sale of all kinds of food excepting meat.
Class 1	Shop assessed above Rs. 250 a month				500	300
" 2	Ditto	ditto	„ 100	...	350	150
" 3	Ditto	ditto	„ 50	...	200	80
" 4	Ditto	ditto	„ 25	...	100	40
" 5	ditto	ditto	„ 10 and owners of permanent stalls at markets.	...	50	20
" 6	Ditto	below	„ 10	...	20	10
Hawkers	4	2

The license to be taken out by hawkers would be an exception to the provision above recommended, to the effect that all shops should be licensed by the name or number of the house occupied, but it would obviously be unfair to the owners of the food shops if hawkers were not required to take out licenses. Daily vendors at markets would not be affected by this recommendation. Their case is dealt with below.

10. In the scale given above it is not intended that the licenses should be cumulative, but alternative, *i.e.*, a tobacco license should entitle the holder to sell any article, while the holder of a license to sell food would be entitled to sell any article except tobacco.

No municipal license would be requisite for the sale of butcher's meat or spirituous liquors; the former would be affected by the additional fee proposed for the slaughtering of animals, and as regards the latter the opinion of the Committee is expressed in paragraph 18 below.

11. The municipal reports show the number of food and tobacco shops now in the town to be as follows:—

Hawkers	397
Shops below Rs. 10 assessment	6,420
" above „ 10 assessment and permanent stalls at markets...	1,832
" " „ 25 ditto	218
" " „ 100 ditto	70

Out of the 70 shops assessed at above Rs. 100 a month, it may be anticipated that about seven would be assessed at above Rs. 250 for that portion of their place of business which is devoted to the retail sale of articles of food or tobacco. It would be equitable to allow any one who claimed it to have a separate assessment made on the portion of his premises devoted to the retail sale of articles of food, and this would cause no appreciable municipal inconvenience. Assuming that one-half of the shops assessed above Rs. 25 would be assessed above Rs. 50, the following estimate may be made of the proceeds of the license fees proposed:—

			Amount of assessment.	Number of tobacco shops.	Fees.	Number of food shops.	Fees.	Annual income.
			Rs.		Rs.		Rs.	Rs.
Class	1	...	Above 250	5	2,500	2	600	8,100
"	2	...	" 100	10	8,500	63	9,450	12,950
"	3	...	" 50	20	4,000	90	7,200	11,200
"	4	...	" 25	20	2,000	90	3,600	5,600
"	5	...	" 10	300	15,000	1,000	20,000	35,000
"	6	...	Below 10	1,000	20,000	5,000	50,000	70,000
Hawkers	10	40	350	700	740
			Total	...	47,040	...	91,550	1,38,590

moodies and tobacconists recorded in the town is 1,915, and all moodies at present sell tobacco. A large margin has, therefore, been allowed for moodies who may prefer to abandon the sale of tobacco rather than pay the higher fee by which its sale would be authorized. Also in the lowest grades, a margin is allowed for shops which may be discontinued in consequence of the imposition of a higher license fee than that now levied.

12. Proposal II (c) does not relate to keepers of permanent stalls at markets; they will pay a license fee, as shopkeepers, assessed at above Rs. 10 a month, as at present. But for the sale of food at temporary stalls (*i.e.*, when the vendor temporarily occupies the ground and goes away every evening, returning the next day either to the same or an adjacent spot) an annual license fee might be required to be paid by the owner of the market. At present he pays Rs. 50 for a personal license, and the same license is paid for the largest and the smallest markets. It would perhaps be best to graduate the fee according to the area set apart for daily vendors. An annual fee of four annas a square foot would be fair, and the Rs. 50 paid by the owner for his personal license might be deducted from the total of the annual fees to be paid by him on account of the temporary stall-holders. There are 26 markets in the town, and the additional income to be derived from this source would probably amount annually to Rs. 10,000.

13. Proposal III, to grant licenses for the retail sale of tobacco has been provided for in the recommendations formulated in paragraphs 9 to 11.

14. IV.—By section 298 of the Calcutta Municipal Act no place may be newly used for certain purposes (described as dangerous and offensive trades) without a license from the Municipal Commissioners, but under the existing law no fee is chargeable for this license. The dangerous and offensive trades specified in section 297 include not merely “melting tallow,” “boiling offal,” and, generally, manufactories from which offensive or unwholesome smells arise—the total number of which places is small—but also yards and depôts for hay, straw, wood and coal. Wood presumably includes timber and bamboos, and depôts for the storage of these articles are numerous; the owner or occupier of any such place might be equitably required to pay a substantial fee for its license. At present no payment on this account is required, though the owner has of course to take out a trade license like any other trader.

15. The owners or occupiers of such depôts as were in existence when the Calcutta Municipal Act was passed are bound to register them under section 297, but as a matter of fact not a single place used for any offensive or dangerous trade has been registered. In default, therefore, of registration, licenses must be taken out for all these places, but the scale of fees should be the same for places registered or licensed so as to meet the case of those depôts of which the owners might even now be able to establish a title to registration in spite of their long neglect. The objection to taxing coal in this form is not very great, as coal used for steamers, railways, and manufactories would not often be stored in any depôt for which such a license would be needed.

16. There is no correct information of the number of these depôts, as licenses have not been taken out in respect of a large proportion of them, and the municipality has not employed any special agency to enforce the taking of licenses. Their number is, however, considerable, and an annual fee varying according to area, say Re. 1 a square yard, should be imposed, while a fixed fee might be charged for offensive trades.

The fees charged at Madras are—

	Rs.
For melting tallow	10
Boiling offal and blood	50
Soap house	50
Oil boiling house	5
Dying house	12
Tannery	75
Brick pottery or lime kiln	20 per kiln.
Sago manufactory	50
Any place likely to be dangerous to life, health, or property ...	100

and at Bombay Rs. 27,000. The sum of Rs. 20,000 is a probable estimate of the amount which might be obtained from this source in Calcutta.

17. Combining the anticipated results of the various proposals set forth in the preceding paragraphs, we have a total of 2½ lakhs of rupees as the addition to be expected to the present income of the Calcutta Municipality, composed as follows :—

	Rs.
Fees on petroleum	94,000
„ on the slaughtering of animals	41,500
Tobacco and food shop licenses	1,88,590
Fees on account of temporary stalls in markets	10,000
„ for licenses for dangerous and offensive trades	20,000
Total	3,04,090
Or, allowing for the Howrah and Suburban share of the income from petroleum, say	2,75,000

18. No proposal is made to tax the sale of wines, beers, and spirituous liquors, because they are already taxed under a system which makes it probable that a great part of the revenue raised would lead to a corresponding reduction in the Government excise revenue. It is a question for Government to determine whether the city is not entitled to some portion of the excise revenue levied on the consumption of spirituous liquors within its area. The municipality enjoys a portion of that revenue both at Bombay and Madras.

19. When the details of this scheme were laid before the Committee, some disappointment was felt at the high scale of fees necessary to produce a revenue of less than three lakhs, and Baboo Kalinath Mitter expressed his preference for a more simple scheme, such as the doubling all round of the amount now levied for trade and profession licenses, which would produce the same revenue; eventually three other members of the Committee adhered to this proposal. The other four members of the Committee, though constituting by the casting vote of the President, a bare majority, do not desire to press the acceptance of the scheme of taxation described in paragraphs 4 to 18 unsupported by their colleagues. Neither the President nor those members who agree with him, consider that the proposal is a particularly desirable one, and though the cost of the licenses would no doubt fall after a short time on the consuming classes, in the same way as an octroi would, the inconvenience of paying for the license would be felt as a great grievance by the retail vendors, and a good deal of discontent and heart-burning would in the outset result therefrom. All that the members of the Committee who concur with the President desire to report as their opinion therefore is that, if taxation is to be levied from articles of general consumption in such a manner that the incidence shall be on consumers, the scheme sketched out above is the only one that has been suggested to the Committee which will effect this object without great interference with the trade and commerce of the city and port; and they think that the municipality should be informed that no other method has been proposed by which a revenue could be levied without doing violence to important economical principles and embarrassing trade and commerce.

20. If the Municipal Commissioners concur with their representatives on the Committee in viewing these proposals with distaste, they should abandon the expectation of raising a revenue by indirect taxation on articles of general consumption. To this the proposed small fee on petroleum constitutes the only exception the Committee would make. Tobacco might also be lightly taxed by requiring all retail vendors of that article to pay a higher license than they do at present by (say) 25 per cent. This would not be seriously felt, and would effect its object by raising slightly the price of tobacco, and thus throwing the tax on the consumers; but the amount thus realized would not exceed Rs. 5,000 per annum, and therefore would scarcely be worth the innovation.

21. As regards the proposal (accepted by four members of the Committee and embodied in the separate dissents which are annexed) to double the present trade and profession licenses, and thereby add 2½ lakhs to the

income of the Corporation, the other four members of the Committee cannot report in favour of it for reasons given in a separate note attached to this report. The views of the four members who are in favour of the proposal are also separately annexed.

22. We have also been authorized by His Honour the Lieutenant-Governor to suggest, if we deem it right, the relief or exemption of the poorer classes from direct taxation if an octroi of any kind is introduced. We have, as above stated, been unable to recommend the introduction of an octroi, but as we have suggested a scheme for raising an income in a somewhat similar manner on articles of general consumption, we are perhaps in a position to express our views on the suggestion above mentioned. We are of opinion that as all the proposed taxes would fall eventually on consumers, of whom the poor are by far the largest number, a portion of the amount might fairly be applied to the purpose of relieving from all direct rates all houses assessed at an annual value below a sum to be settled after due consideration.

23. The Corporation of Calcutta, we are informed, issues nearly 300,000 bills per annum for the house, water, police, and lighting rates for a total demand of 20 lakhs, and 73,000 of these bills (being the rate bills on huts assessed at Rs. 5 a month and under) represent an aggregate demand of only Rs. 40,000: thus by abandoning 2 per cent. of the demand which is levied from the poorest classes, 24 per cent. of the bills would be saved.

It is strictly in accordance with the principles of political economy to exempt the poorest class of houses from any direct taxation. Mr. J. S. Mill, in the last paragraph of his section on the House Tax, says:—

“As incomes below a certain amount ought to be exempt from income tax, so ought houses below a certain value from house tax, on the universal principle of freeing from all taxation the absolute necessities of healthful existence.”

24. To the suggestion contained in paragraph 22 we would add another, in support of the views of the President, who as Chairman of the Corporation has had considerable opportunities of arriving at a conclusion. He is of opinion that it is desirable to free all or most of the public latrines in the town. These, we are informed, were constructed in the time of the Justices at a total cost of Rs. 8,41,000, and are annually leased out to sirdar mehters by public auction for about Rs. 20,000. They pay, therefore, about 6 per cent. net return on the outlay. So far as they are a financial undertaking, therefore, they are on a fair and equitable basis; but the non-existence of free public latrines is, we believe, one of the most embarrassing causes of the filthy condition of waste, unoccupied, and secluded lands. As long as the poorest classes, who have no latrines of their own, cannot resort to public latrines without payment, pollution of the soil is unavoidable. We concur in the President's views, but we have to add that the subject is one which falls within the scope of the duties of the Municipal Commissioners rather than of ourselves.

25. We have also been directed to consider the question whether it is desirable to extend octroi taxation to Howrah and the Suburbs. We do not think it necessary to make any recommendation regarding Howrah, which, being divided by a broad river from Calcutta, can without any difficulty be still kept under a separate administration; but we unanimously recommend the extension to the Suburbs of any of the modes of taxation described above which might be adopted in Calcutta; indeed, it is almost a requisite of the success of such proposals that they should be so extended. Shops on the east and south side of Circular Road have not hitherto paid any license fee, and if the heavier fees on licenses recommended were imposed only in Calcutta, many shops would be transferred to the other side of the boundary. We apprehend that the Suburban Municipality is quite as much in want of additional funds as the Corporation of Calcutta. Should it be said that the inhabitants of the Suburbs being poorer than those of Calcutta, the proposed taxation would fall on them with greater severity, we have to remark that so far as the fees to be paid on licenses are concerned, the gradation of the license according to the assessed value of the shop furnishes the necessary corrective, as where the custom is least the rent will also be lowest. Indeed, the Committee would go further, and if they are not exceeding their functions, would draw attention to the desirability of placing the Suburbs and Calcutta under one central controlling authority, while at

the same time preserving for each large sub-division of the amalgamated municipality considerable initiative and responsibility in matters of local administration. Their interests are so identical as to render union between them almost indispensable.

26. Two copies of our proceedings are enclosed for the information of Government.

The 31st December 1884.

I HAVE signed the report, subject to the following reservations, viz.:—

1. I am sorry the proposition for the taxing of food in the shape in which it has been recommended in the report cannot command my assent. The incidence of such taxation would be seriously oppressive on the poorer classes; I would have therefore much preferred an increased rate of license fee on professions, trades, and callings as enumerated in the third schedule of Bengal Act IV of 1876. If the rate be doubled, it would yield quite as much as my colleagues anticipate from a variety of sources and several of which are so objectionable. I was unfortunately absent from the meeting of the Committee on 8th instant, in which this scheme appears to have been negatived. As between that scheme and the one that has been proposed as its substitute, there cannot be any question that the former has considerable advantages, inasmuch as the burden of such taxation would have fallen on a larger area, and being thus distributed, its incidence would have been much lightened upon the poor, those who are the least complaining of the community, and it is on this ground that I object to the scheme the most.

2. The exorbitantly heavy tax proposed for tobacco is intolerable. It has been adopted under European ideas not applicable to this country. In Europe, tobacco is to a great extent a luxury, and therefore it is fitly selected as an article for taxation. In India it is a necessity in the damp climate of Bengal; it is a pressing necessity, and to tax it heavily would be to deprive the poor of the help of a potent preservative. I cannot on any account support so cruel a proposition. The rich man's wines, spirits, and beer, and country arrack would escape, and so the poor man who indulges in, or finds it necessary to take, the least intoxicating of substances, is to be subjected to a heavy impost.

3. I consider the levy of a fee of two annas a case on petroleum a very appropriate tax to impose. It is light in amount, and can do no harm.

4. I object to the tax on dangerous and offensive trades as described in section 298 of the Municipal Act, as it would legalise what should be discouraged in every possible way. The temptation of gain would induce the Municipality to encourage the carrying on of occupations and trades which should be driven out of the town. A thickly peopled town of small area is no place for melting tallow, boiling offal and blood, soap-house, tannery, and the like. They were strongly condemned when the first Municipal Act was passed, and the saving clause about old established works was introduced to protect traditional interest. The license was provided to enable the Municipality to prevent their growth, and the time has now come to prohibit them altogether, and not to encourage them. I observe that under this head it is proposed to levy a heavy license fee for all depôts for the sale of timber, fuel, hay, bamboos, wood, &c. While I agree to the expediency of taxing them, the rate proposed appears to me to be exorbitant.

5. The prospect of relief from house-rate for the poorer classes will not generally apply to the poorest, for no house-rent will be reduced in their case by the abandonment of a two per cent. on the entire amount of the town-tax below a certain limit. They are mostly not the owners of houses but kufia

ryots, and so they can have no relief, and they will be at the same time heavily taxed for their necessities of life.

6. My colleagues have quoted with approbation the opinion of J. S. MIH, that "as incomes below a certain amount ought to be exempt from income-tax, so might houses below a certain value from house-tax, on the universal principle of freeing from all taxation the absolute necessities of healthful existence." I entirely subscribe to this opinion, but I cannot help noticing that they have entirely lost sight of it in recommending heavy taxes on food and fuel, the most important necessities of life.

D. LAW.

It seems to me that doubling license fees all round is a far more simple and effectual mode of raising an additional revenue of about 2,50,000 being the amount likely to be raised if the President's scheme is adopted. The Administration Report of 1882-83 shows the following licenses granted during that year:—

- 187 Joint Stock Companies.
- 1,375 Merchants, agents, wholesale traders, shroffs, baniahs, builders, auctioneers, and owners of jute presses.
- 222 Practising barristers, attorneys, and pleaders of the High Court.
- 26 Owners of markets and bazars.
- 17 Surgeons.
- 120 Keepers of hotels, boarding-houses, dispensaries, manufacturers, and other shop-keepers whose shops and places of business are assessed at Rs. 100 per month or upwards.
- 138 Pleaders of subordinate courts and mooktears.
- 218 Practising Licentiates of medicine, apothecaries, veterinary surgeons, and owners of dispensaries.
- 1,182 Keepers of hotels, boarding-houses, or whose shops or places of business are assessed at or about Rs. 25, but less than Rs. 100 per month.
- 432 Pawn-brokers, money-lenders, and shop-keepers whose shops or places of business have been registered under sections 297 and 298.
- 58 Owners of barge boats.
- 67 Native doctors, kavirajes, and hakeems.
- 49 Order-suppliers.
- 146 Cooly-suppliers, shipping agents, &c.
- 97 Poddars and money-changers.
- 3,093 Keepers of permanent stalls, miscellaneous shop-keepers whose shops are assessed at Rs. 10 per month, but less than Rs. 25 per month.
- 12,472 Midwives, petty dallals, and shop-keepers whose shops are assessed under Rs. 10 per month, and pedlars.
- 5,914 Itinerant dealers.
- 865 Miscellaneous shop-keepers.

If the fees are doubled, the additional amount will, in the first instance, be paid by 25,678 persons, yet the whole of them will undoubtedly be able to recoup themselves in the course of their trade, with the probable exception of practising barristers, attorneys, pleaders of the High Court, and surgeons; but their number is so limited that one is justified in considering their interests subordinate to the important question of the sanitation of the town. The scheme proposed by me is a far more comprehensive one than that of the President, and it seems to me that it is not likely to cause such an amount of heart-burning as is sure to happen if the other mode is preferred. It is true that the burden of taxation in the case recommended by the majority would ultimately fall upon the general public, but in the meantime several small dealers will be swept away, and the poor will in a great measure be deprived of one of the necessities of their life, namely, to have their chillam of tobacco. It is difficult to conjecture why food and tobacco shops should alone be called upon to bear the burden of the increased taxation while all other classes of trade are not at all to be interfered with. The answer that the incidence of taxation will fall upon the consumers will not avail to so great an extent when, by the proposals made in this dissent, the increase in taxation to individual traders will be so trifling as to render the raising of prices almost unnecessary. It may be mentioned that all the members of the Octroi Committee were of opinion that an octroi pure and simple was impracticable in Calcutta, and two of our members were strongly opposed even to the

name of octroi being used for the same mode of taxation as prevails in Bombay. Under such circumstances is it not best to devise such a plan as will be least oppressive and will cause the least amount of harassment to trade. I am of opinion that my proposal has both the advantages, and therefore will adhere to it.

KALLY NATH MITTER.

The 20th December 1884.

I REGRET that I am compelled to record my dissent from the major portion of the proposals set forth in this report.

I cannot bring myself to accept a scheme which has for its main feature so large an enhancement as that proposed in the rates now charged for municipal licenses, and that too of only one section of the traders in the town, viz., the vendors of articles of food and tobacco. It is not to be doubted that such a scheme if brought into operation would press with undue hardship on traders of this class, and because also, from the rise in prices which would follow, of much distress to the poorer inhabitants of the town.

It must be seen that if the collection of even the present license tax from the poorer class of traders is attended with some difficulty, and involves the issue of a large number of summons for its recovery, the difficulty in collecting the proposed higher rates cannot but prove infinitely greater, and result in very serious hardship.

It appears to me that the reasons which led the Committee to consider that they could not recommend the introduction of a system of octroi in Calcutta apply with equal force to the proposal to which I feel it my duty to take exception.

It is certain that the proposed increase would lead to numerous attempts to evade the payment of the tax, simply from the inability of the poorer traders to meet it, and entail in other ways a serious amount of harassment and demoralization.

The payment of a duty on goods and of a tax on trades are two distinctly separate matters: the payment of the former in small sums is generally not felt, and is regarded as a portion of the price to be paid for bringing an article into retail sale; the payment of the latter, on the other hand, has to be met from the profits of a trade, and such profits are proverbially uncertain.

It is difficult, moreover, to understand why (if an addition to the revenues of the municipality be necessary for sanitary and structural improvements in the town) the increased revenue, or, it may be, the larger portion of it, should be raised by the levy of heavy taxes from one special class of traders only. Such improvements being of equal importance to all the residents of the town, it is but just that any proposed scheme of taxation should embrace the widest scope possible, and that even if it be unequal in its incidence, it should be contributed to by as large a portion of the community as possible.

I feel no doubt that this end would be served to a material extent by merely doubling the municipal tax on trades and professions as enumerated in the third schedule of Bengal Act IV of 1876. I therefore still adhere to the resolution brought forward at the meeting of the Committee by Baboo Kally Nath Mitter and seconded by myself.

Beyond this, I am in favour of levying a fee not exceeding two annas on each case of petroleum brought into the town for storage, of exempting the poorer classes from direct municipal taxation as pointed out in paragraph 22 of the report, and of making all the public latrines free.

A. H. WALLIS,

Member, Octroi Committee.

Calcutta, the 20th October 1884.

THE undersigned members of the Committee regret that they are not able to concur in the suggestion to double the license fees for exercising trades, professions, and callings in Calcutta.

The proposal seems to them to be inopportune and also not equitable.

It is inopportune, because there is nothing in the circumstances which preceded the appointment of the Committee to warrant a suggestion which differs fundamentally in principle, though only partially in practical operation, from that proposed by the President. The appointment of the Committee is due to the offer of Government to relinquish a portion of the police rate on the condition that the Municipality would raise an equivalent amount of taxation by augmenting the house-rate. The Commissioners in reply objected to replacing a tax which fell upon occupiers by a tax which would fall on a limited portion of the community, viz., the owners of houses, and suggested in lieu thereof, an octroi as a form of taxation which would fall upon all persons residing in the town in proportion to their consumption of the ordinary articles of food and of other necessities.

An octroi of the ordinary kind, that is the establishment of a cordon of posts on passing which all taxable articles would have to pay duty, was considered to be open to grave objections, and the Committee therefore considered in lieu thereof certain suggestions which would lead to the same fiscal result, that is, that the same articles should be taxed at the time of their retail vend. Such taxation would be eventually paid by all consumers as would an ordinary octroi.

It was mainly for this reason that the Committee consented to consider the details of this proposal. If not an octroi, it was at least taxation levied on the same articles of consumption as an octroi, and payable in the long run by the same class of persons. But this cannot be said of the suggestion to double all trade and profession licenses promiscuously. These licenses are taken out by many persons who are not at all in a position to transfer to the general consumer the tax payable by them as the vendors of the necessities of life would be. Among their number are to be found professional men—barristers and pleaders, physicians and surgeons, engineers and architects—whose fees are regulated by a scale which could not be altered to meet the increased license-fee; merchants, brokers, and commission agents, whose profits depend on the state of trade and commerce; traders, whose competitors carry on their business in England and the continent of Europe, and many others whose profits are regulated by conditions independent of local taxation. All such persons would not only have to pay their own augmented license fees, but would also suffer from the higher prices that would result from the extra fees taken from the vendors of food and other necessities.

Instead, therefore, of a tax on all consumers, the proposed alternative is a tax on the very limited class which now pays the municipal license-tax; and the question, therefore, arises whether it is equitable to select this class to bear the burden of such additional taxation as is deemed requisite.

The present Municipal Act allows 10 per cent. to be taken as a maximum from owners in the form of a house-rate and 11 per cent. to be taken as a maximum from occupiers in the form of water, police, and lighting rates, while license-fees are leviable at certain maximum rates for professions, trades, and callings.

This last tax has invariably been levied at maximum rates, and it requires a very strong case to be made out before the committee would be justified in asking to have these rates doubled when for many years past neither owners nor occupiers have been paying more than $7\frac{1}{2}$ per cent.

H. L. HARRISON.
WM. CRAIK.
G. H. MORRISON.
C. E. BUCKLAND.

I sign this report with the following reservations:—

It is very unfortunate that in a matter of such grave importance, the representatives of different interests could not agree on their report to Government. Unanimity amongst the Members would have carried great weight especially when the question involves increase of taxation, and the Committee

is charged with the duty of suggesting the most suitable one to harmonise with the instincts of the people on whom this additional burden will have to be imposed.

It is a well-known fact that the Government of this country had been for a long time thinking of imposing a tax on tobacco, but for diverse reasons it refrained from doing so. Foremost amongst other considerations is that the poorer people use tobacco more than any other class, and it serves both as a safeguard against malaria and an indispensable luxury of their simple life. Even now tobacco is much adulterated, and if any tax be imposed, it will be more so, and thereby be injurious to the health of the people. I am therefore unable to recommend any tax on tobacco. Neither do I see any reason to increase the license tax on retail food shops and on dangerous and offensive trades. My reason for this is simple and obvious. It is a well-known fact that these retail shop-keepers of food are generally men without any capital of their own, and who only borrow money to carry on this trade, and who besides adulterate the *ghee*, &c., to such an extent, that those who use these articles of food generally get dyspepsia, acidity, and other diseases. Any additional tax would either drive these people out of the field of competition, or compel them to use coarser stuff, because the people would not take any such article less in quantity than what they now get for their money.

With reference to the question of levying fees on dangerous and offensive trades in Calcutta, I fear that the small amount to be realised from this source would not be compensated by the amount of risk to life and property we would incur by allowing such trades to be carried on within such a small area. Such trades are generally carried on in the Suburbs, and it would be most desirable if all such trades be removed there. The Suburban Municipality until recently had been getting an income of Rs. 12,000 per annum from this source, and I would suggest that power be given to that Municipality to impose fees on such trades, which would give them an income of about Rs. 15,000 or more per annum. Besides, such an additional burden would not be felt by the people, as they had been paying such fees from 1864 to 1876. It would certainly be most objectionable to allow these dangerous and offensive trades to be carried on within the limits of the town.

As for doubling the license tax under the Calcutta Municipal Act, I am sorry that I gave my support in the Committee to such a proposition. I think I could without contradiction say that those Members of the Committee who suggested or supported this proposition merely wanted to make their choice out of two evils, and they preferred one to the other suggested by the other four Members of the Committee, including the Chairman. On second thoughts, I find that the one is as objectionable as the other; and when I consider the fact that those who now pay the municipal license tax also pay the Imperial license tax, it becomes a matter of serious consideration how far we are justified in recommending an additional burden on a class who are already groaning under the present burden; and to impose on them anything additional would prove the last straw on the camel's back.

As for giving up an income of Rs. 20,000 per annum derived from public latrines, I have serious objections. These latrines are constructed at a cost of Rs. 3,41,000, and the Commissioners have to pay now 6 per cent. interest to the debenture-holders. If on sanitary grounds it is considered desirable to free all the public latrines in the Town, I should certainly consider it only fair that this amount should be debited to the night-soil account, which yields a large surplus almost every year.

I would not object to raising the fees on slaughtering animals in the municipal slaughter-house, and to bring such places as are under private management under municipal control. The Members of the Committee are unanimous in recommending a fee of two annas on each case of petroleum brought within the Town and Suburbs, which would give an income of Rs. 94,000 per annum. I would suggest here that instead of giving up a lakh of rupees annually on police charges, let Government give Rs. 1,50,000 per annum from the abkaree revenue, and release the Suburbs from the payment of Rs. 35,000 which they now pay as their one-fourth contribution to the police charges. If to this Rs. 10,000 be given to the Suburbs out of the fees realised

from the petroleum, then the income of the Town would be from fees on petroleum				Rs.	84,000
Additional fee from municipal slaughter-house				"	41,000
Contribution by Government from abkaree revenue				"	1,50,000
				"	2,75,000
Add municipal contribution				"	1,50,000
Total for the Town				"	4,25,000
And the Suburbs' fees from petrol-um...				"	10,000
License from dangerous and offensive trades				"	15,000
One-fourth police contribution by Government				"	35,000
				"	60,000
Add municipal contribution				"	35,000
Total for Suburbs				"	95,000

Let Government in giving Rs. 1,50,000 and Rs. 35,000 to the Town and Suburban Municipalities make it a condition precedent that the municipality will give a like grant for town and bustee and conservancy improvements of places within their respective jurisdiction.

Thus we shall have Rs. 4,25,000 at the disposal of the Town Corporation and Rs. 95,000 at the disposal of the Suburban Municipality to make a fair start.

19th January 1885.

JODOO LAUL MULLICK,

A Member of the Octroi Committee.

No. 961, dated Calcutta, the 4th April 1885.

From—COLMAN MACAULAY, Esq., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Chairman of the Corporation of the Town of Calcutta.

WITH reference to my letter No. 779, dated the 17th July last, I am directed to forward herewith, for the consideration of the Commissioners, a copy of the report of the Committee appointed to report upon the proposal to levy an octroi in Calcutta.

2. It will be observed from paragraph 19 of the report that the Committee do not desire to press the acceptance of the scheme of taxation described in paragraphs 4 to 18 in view of the bare majority by which it was carried in the Committee. The only question of taxation in which there was an unanimity of opinion is the proposal to levy a fee of 2 annas upon every case of petroleum brought into the town for consumption.

3. The remarks made by the Committee in paragraphs 22 to 24 of their report, regarding the question of relief to be given to the poorer classes living in the town from direct taxation, if an octroi of any kind is introduced, deserve the consideration of the Commissioners.

4. I am desired to invite the special attention of the Commissioners to the concluding part of paragraph 25 of the report, where the Committee recommend the amalgamation of the town and suburbs for municipal administration, and to say that Sir Rivers Thompson would be glad to have the views of the Commissioners upon this point.

No. 528, dated Calcutta, the 26th May 1885.

From—H. L. HARRISON, Esq., Chairman of the Corporation of Calcutta,
To—The Secretary to the Government of Bengal, Municipal Department.

THE report of the Octroi Committee, forwarded for the consideration of the Commissioners with Government order No. 961 of the 4th April, was duly laid before the Town Council, when it was directed that a Special General Meeting should be called for the purpose of discussing it.

2. The views of the Commissioners are indicated by the Resolutions which were passed at this Meeting; they are as follows :—

(1) That the Commissioners concur in the recommendation to charge two annas a case on all petroleum stored in the town.

(2) That looking to the circumstances of Calcutta and the objections which are raised to an octroi proper, the Commissioners are not in favor of raising a municipal income by means of an octroi.

(3) That the scheme for an indirect tax on articles of consumption set forth in the Committee's report will cause much discontent among retail vendors, and is not desirable.

(4) With reference to the proposition to place Calcutta and the Suburbs under one central controlling authority, while at the same time preserving for each large sub-division of the amalgamated municipality considerable initiative and responsibility in matters of local administration, the Commissioners are of opinion that it is desirable that certain portions of the Suburbs should be amalgamated with the Town.

(5) That a Committee be appointed to determine what portions should be amalgamated.

3. A rider on No 3 which was prepared by the Chairman to the effect that "an exception might be made in the case of tobacco, and a small license fee varying according to the assessment of the shop, be imposed for its retail vend in addition to the ordinary trade license" was lost by a large majority.

4. Of the above propositions Nos. 2 and 4 elicited much difference of opinion, and an amendment moved, by Mr. Nolan, to the effect that the Commissioners were prepared to consider proposals for an octroi on any article which appeared to be adapted to that mode of taxation, was only lost by a narrow majority.

5. As regards No. 4, an amendment was moved by Baboo Soorendro Nath Banerjee that the Meeting regret that the amalgamation of Calcutta and Suburbs under the municipal administration would lead to administrative inconvenience, stop the steady improvement of the Suburbs, throw the burden of the improvement of the Suburbs upon the rate-payers of the Town, and defeat the principle of local self-government which aims to utilise local interests and local experience for the administration of local affairs. This, after an animated discussion, was lost by a majority of 18 to 11.

6. A further report will be submitted when the Committee, which has been appointed, have completed their labors.

**RESOLUTION ON THE REPORT ON THE ADMINISTRATION
CIVIL JUSTICE IN THE SONTHAL PERGUNNAHS
DURING THE YEAR 1884.**

RESOLUTION.

JUDICIAL.

Darjeeling, the 4th July 1885.

READ—

The Annual Report on the Administration of Civil Justice in the Sonthal Pergunnahs for the year 1884.

Read also—

The Reports for the years 1882 and 1883, and the orders of Government recorded thereon.

The following comparative statement shows the progress of civil litigation in the Sonthal Pergunnahs during the past three years :—

	Instituted.			Disposed of.			Pending.		
	1882.	1883.	1884.	1882.	1883.	1884.	1882.	1883.	1884.
Civil suits	7,350	7,351	6,065	7,882	7,289	6,468	685	697	894
Ben	4,545	3,992	3,583	4,902	3,534	3,611	376	433	406
Title	478	1,443	2,873	469	1,250	2,452	170	323	763
Civil execution	4,448	4,253	3,470	4,053	4,214	3,401	719	754	822
Rent	3,362	2,805	2,481	3,125	2,983	2,185	615	467	708
Title	130	508	791	115	448	735	48	108	159
Total	20,512	20,252	19,813	20,530	19,942	18,835	2,463	2,771	3,748

While the total number of institutions, including execution cases, slightly decreased in 1884, the number of suits disposed of fell from 19,942 to 18,835, and the number of suits pending at the close of the year rose from 2,771 to 3,748.

2. Civil suits, that is suits for money and moveable property, decreased from 7,351 to 6,665. The decrease occurred in all sub-divisions of the district with the exception of Doomka, and is attributed to loss of crops and consequent distress of a rather severe type. Although the number of suits instituted decreased, the number pending at the close of the year increased from 697 to 894, and the number disposed of was less by 821 than in the year 1883. This result is not satisfactory, and a clear explanation should have been given by the Commissioner. The Commissioner again notices the anomaly regarding the application of the usury clauses of Regulation III of 1872, which were specially adopted for the protection of the Southals in their dealings with foreign money-lenders. The High Court having decided that those clauses do not apply to contracts under the Contract Act, the application of them to cases in which the claim exceeds Rs. 1,000 is at present in abeyance, as such cases are tried in the courts in the Sonthal Pergunnahs constituted under the Civil Courts Act VI (B.C.) of 1871. Cases in which the claim does not exceed Rs. 1,000 are dealt with by courts appointed under section 2, Sonthal Districts Act XXXVII of 1885, and are not appealable to the High Court. To these cases the usury clauses are still applied by the Courts. The Commissioner remarks: "As the question stands, it appears to me that our procedure answers the main object fairly well. The limit of Rs. 1,000 suffices, I imagine, to cover all cases in which Southals are concerned, and they consequently reap the benefit of the usury clauses. If hardship has arisen in cases of a higher value, rendering change of the law desirable, the Deputy Commissioner should particularize and give instances in detail." In these views the Lieutenant-Governor agrees. In view of the following description given by the Deputy Commissioner of the exacting character of some of the money-lending classes in Sonthalia, the Lieutenant-Governor would not lightly modify the present accepted policy. Mr. Forbes writes:—

The worst class of traders and money-lenders in the district, as Mr. Oldham pointed out last year, is the Bhojpoorea Bhagat from the Arrah district. He is stigmatized even by his fellow-workers as the most grasping and usurious of all his class, and the most unscrupulous in regard to accounts. This is the only district in which he has been able to get and retain a firm foothold, and the reason is obvious. As a land-grubber he has no equal, and in dealing with him as a suitor, particularly when his victim is a Sonthal or other

man, the courts have to be very careful in their scrutiny of the accounts. The Bhagat is the only man who does not subscribe to the custom, amounting to creed, prevalent among ordinary traders and money-lenders never to worry agricultural debtors during the period of cultivating his fields or gathering his harvests. At a meeting held by me in Ilberidwa in January, at which some zemindars and a large and influential gathering of mahajans and traders were present, the question of sales of ryoti lands to money-lenders was under discussion. The more respectable traders, even, who themselves had purchased lands, were of opinion that the mahajans, as a rule, did not care to hold isolated pieces of land, as they rarely if ever cultivated the lands themselves, and the profits they derived were not remunerative, and they considered it as so much capital sunk. They were of opinion that, looking at the excitable nature of the Sonthal people, and the risk they ran from holding these people's lands, they would gladly give them up if they could get an equitable arrangement for the recovery of their debts. They assured me that these lands were generally acquired by them as a last resource, and because the vendors themselves preferred to take this course rather than have a debt hanging over them and a constant dread of being sued. But they were unanimously of opinion that the Bhagat money-lenders would fight to the death rather than yield an inch towards the giving up of lands.

3. Suits instituted for arrears of rent decreased from 3,693 to 3,497. Suits for ejectment have decreased from 631 in 1882 to 37 in the year under review, and this is a result of the settlement; for, as the Commissioner infers, the people have arranged whatever differences they had on the basis of the settlement, and doubts which prevailed before regarding holdings have now disappeared. Rent-suits, it is stated, are of an extremely simple character, and the record, as a rule, shows that a suit is only brought when the rent-receiver has failed to obtain payment through the usual means of laying the claim first before a village punchayet. As regards the disposals, there was a slight decline in the number decided, from 3,834 to 3,611. This is, no doubt, due to some extent to the changes among the officers in the Sonthal Pergunnahs. These, during the past year, were, from various causes, more frequent than is ordinarily the case. The question of the relation existing between the village headman and the ryots is connected with the administration of civil justice only so far as it effects the litigation between those parties. Upon this particular point the report is silent; and upon the general aspect of the question the Commissioner promises a separate report. The main object of the Regulation of 1872 was to secure the peace and order of the district, and among the means to that end was the ascertainment and record of all the various interests and rights in the land. If the position of the "moostajir" of the village has, to some extent, been altered and affected in the process, the gain on other sides has been very great, and the Lieutenant-Governor is inclined to think that the fears which Mr. Forbes expresses in the appendix attached to the Commissioner's report are somewhat exaggerated.

4. In title suits there was an increase from 1,443 to 2,873 in institutions; from 1,290 to 2,432 in suits disposed of; and from 323 to 763 in suits pending at the close of the year. In 1882 the number of title suits was 478, and the sudden increase in 1883 was explained by the classification of jote suits under this heading, these having, till September 1882, been shown as cases under the rent laws. On the increase in 1884, the Deputy Commissioner remarks: "The reason for this sudden and extraordinary rise is mainly our own action in dealing with transfers and sales of cultivators' jotes. Mr. Oldham, in his report for last year, alluded to the feeling of disquietude then existing among the Sonthals. Subsequently, it would appear these people came to know that Mr. Oldham had asked for a rule absolutely prohibiting sales, and they also by some means learned that an order had passed directing the courts to stay proceedings in execution cases in which Sonthals were the judgment-debtors. The people drew their own conclusions from these facts. Meetings appear to have been held simultaneously in Hendwai (Doomka) and Sultanabad (Pakour), and several cases of dispossession of Diku purchasers by Sonthals and others occurred simultaneously in both places." The attempts at lawlessness were easily suppressed. The passing of the Bengal Tenancy Act so far meets the case that transfers of occupancy holdings are left to the particular custom and usage of each district. In the Sonthal Pergunnahs there may be very good reasons for the absolute prohibition of such a practice. The Commissioner's report on this special question is awaited.

5. Including three appeals pending from the previous year, there were six appeals to the High Court, four of which were decided during the year. (The number of appeals against the orders of subordinate civil and revenue

courts increased from 632 to 759, of which 490 were to Sub-Divisional Officers and 269 to the Deputy Commissioner. Miscellaneous appeals increased from 43 to 77. It must, however, be borne in mind, when comparing the appeal work of 1884 with that of the preceding year, that in the latter the number of these cases was abnormally small.

6. The receipts of the courts decreased from Rs. 75,718-5-6 to Rs. 72,901-4. There was an increase in Doomka, Godda, Rajmehar, and Jamtara, but it was more than balanced by a decrease from Rs. 22,755 to Rs. 19,377 in the receipts in Deoghur, and a decrease from Rs. 10,783-9 to Rs. 5,133 in Pakour. The decrease in these two sub-divisions is attributed by the Commissioner to a falling off in institutions of suits of large values. This statement, however, affords no explanation of the decrease, as it is but a reiteration of the same fact in different words. Suits in the civil courts of values not exceeding Rs. 10 decreased from 5,409 to 4,934; of values between Rs. 10 and Rs. 50 increased from 5,150 to 6,058; and of values between Rs. 50 and Rs. 100 from 1,322 to 1,351. In suits of higher values, those of values not exceeding Rs. 500 decreased from 682 to 653; of values not exceeding Rs. 1,000 from 43 to 38; and of values not exceeding Rs. 5,000 from 36 to 28. The decrease in the total value of suits was from Rs. 4,87,960 to Rs. 4,87,169, and was only nominal. These figures therefore certainly do not explain the general decrease in the receipts. The Deputy Commissioner states that special attention was paid during the year to the valuation of suits, and that he intends to make a further report at an early date on the whole subject. Pending the submission of this report, the special attention of the Deputy Commissioner has been drawn to the orders contained in paragraph 6 of the Resolution of 1882, directing the exercise of a closer scrutiny into the valuation of all suits, with a view to ensure that the stamp revenue does not suffer.

7. There were 8,159 applications for execution of decrees before the courts. Of these, 2,644 were satisfied in full and 532 in part. The amount realized was Rs. 1,15,684, of which Rs. 12,217 were realized without issue of process. On 487 applications immoveable property was sold. In 1883 immoveable property was sold on 687 applications. In future reports the Commissioner should notice how far the sale of immoveable property in execution of decrees has the effect of transferring land from the possession of Sonthalis to that of persons foreign to the district.

8. The information afforded to the Lieutenant-Governor by the Commissioner's report regarding the administration of civil justice in the Sonthal Pergunnahs for the year 1884 is not so full as that afforded by the preceding report for the year 1883, as the report of the Deputy Commissioner has this year not been forwarded. The Deputy Commissioner's report should always be sent as an appendix to the report of the Commissioner.

9. Sir Rivers Thompson is pleased to observe that the officers in the Sonthal Pergunnahs have, with hardly an exception, continued to discharge their respective duties with zeal and intelligence. The work is certainly heavy, and such as to cause a severe strain on their energies. It is satisfactory therefore to notice that the quality, as well as the quantity, of work has been, on the whole, good. A copy of the remarks of the Commissioner regarding these officers will be forwarded for record in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Secretary to the Government of Bengal,

METHODOCATTLE VACCINATION IN MONSIEUR PASTEUR'S LABORATORY, PARIS.

Circular No. 88C—3-8, dated Simla, the 16th May 1885.

From—C. S. BAYLEY, Esq., c.s., Officiating Under-Secretary to the Govt of India, Revenue and Agricultural Department,

To—The Secretary to the Government of Bengal, Municipal Dept.

In continuation of Mr. Holderness' endorsement No. 123—2-18, dated the 21st November 1884, I am directed to forward, for the information of His Honor the Lieutenant-Governor, copies of a report* by Dr. Hallen, General Superintendent of Horse-breeding Operations in India, on the results of a visit to Monsieur Pasteur's Laboratory in Paris.

* No 76MD, dated 6th December 1884, to the Government of India, Military Department.

2. It has been suggested to her Majesty's Secretary of State for India that a few of the veterinary officers sent out to India should receive a special course of training in the institutions devoted to the study and culture of disease germs; and it has been proposed to establish a laboratory of the character indicated in paragraphs 7 to 10 of Dr. Hallen's report in connection with the Veterinary College at Lahore. This last proposal may, however, be modified so far as the locality of the first laboratory is concerned.

No. 76MD, dated Babugarh, the 6th December 1884.

From—J. H. B. HALLEN, Esq., Inspecting Veterinary Surgeon and General Suplt., Horse-breeding Operations in India,

To—The Secretary to the Government of India, Military Department.

I HAVE the honour to submit the following report for the consideration of His Excellency the Viceroy of India in Council.

2. I received, when in England, a letter, R. S. and C., No. 1604, dated 18th August 1884 (copy attached, and marked A), from the India Office, explaining that, before returning to my duties, I should visit Monsieur Pasteur's Laboratory in Paris, with the view of learning the method of vaccinating cattle, to which I replied that I would have much pleasure and interest in doing so; and in due course, having been furnished with the necessary letter from the Foreign Office to the British Embassy at Paris, I proceeded there on the 5th September 1884 on the visit of enquiry.

3. After my return to London on the 14th September 1884, I submitted the following report, dated Edinburgh, 24th September 1884, to the Under-Secretary of State for India:—

"Referring to letter, R. S. and C., No. 1677, dated India Office, 4th instant, to my address, I have the honour to report that I proceeded on the 5th instant to Paris for the purpose of investigating in that city the method of cattle vaccination pursued by Professor Pasteur.

"On calling at the British Embassy, I delivered the letter received from the Foreign Office, in which the purport of my visit was explained, and Sir John Walsham kindly wrote that day to Professor Pasteur on the subject. Monsieur Pasteur was at the time some distance from Paris, but on receiving Sir John Walsham's letter at once courteously replied to the effect that he regretted his inability to personally explain the method of vaccination adopted, but had written to his representative, instructing him to do all in his power to assist me.

"Accordingly on the 11th instant, accompanied by Mr. Crowe of the Embassy, who was so good as to offer to assist me in mastering all details, as my limited knowledge of the French language might cause me some difficulty in acquiring all particulars, I went to Professor Pasteur's establishment, and there found Monsieur Loire, his representative, who most fully explained and demonstrated with the necessary apparatus the measures adopted in detecting and cultivating anthrax germs, and attenuating the virus, so as to render it 'vaccine' of the two kinds used, viz. *Première* and *Deuxième*; also he pointed out how the operation of vaccination is performed in sheep, cattle, and horses.

"This gentleman's demonstrations were most lucid, fully bearing out all I had read in publications by Monsieur Pasteur and other scientists on the subject.

"That animals duly vaccinated with the attenuated virus, as prepared in Professor Pasteur's Laboratory under the names *Première* and *Deuxième*, become protected from anthrax, has been most fully proved, and thus in France and neighbouring countries the system is becoming generally adopted, and heavy losses among stock are gradually more and more prevented.

"This boon should now be extended to India, where anthrax in many forms attacks animals; for example, as Ludhiana disease in the equine, and quarter-ill and black-leg in the ovine and bovine species.

"But to have anthrax 'vaccine' available in India, it will be necessary to have laboratories established there, where, under specially qualified veterinary surgeons, 'vaccine' of a certain strength may be prepared and thence issued as required in the districts. To have

3. If the water passes above the piston, it is a sign that it is bad and will have to be changed. If one piston only is at the disposal of the operator, it must be tightened a little with the small key which is in the box of the syringe.

4. *Sheep and goats.*—When the syringe is quite full, the little brass marker which is on the stem of the piston must be placed at the division marked 1. An assistant must then take hold of the animal which is to be inoculated, and hold it firmly by its forelegs in the required position. The operator then must insert his needle under the skin in the middle of the *right* thigh, and push the piston until the marker touches the syringe. The inoculation of the first animal is then complete. The syringe is drawn back, the brass marker is placed at the division marked "2" on the stem of the piston, and the second animal is operated upon; and so on, each syringe holding enough to inoculate eight. When empty, the syringe must be filled up again in the same way as before. With a little practice, a man would soon be able to inoculate 150 sheep per hour. Twelve or fourteen days after the first operation, the process must be repeated with the second vaccine; but this time the injection must be made in the *left* thigh of the animal, that is, in the one which has not been already operated upon.

5. *Horses, &c.*—The same fluid which is used for sheep and goats may be taken for cattle, horses, asses, and mules; but a double dose will be needed for the larger animals; that is to say, the small brass marker must be placed at the division 2 for the first operation, afterwards it may be put at 4, and then at 6, &c., each syringe containing enough lymph to inoculate four of the larger instead of eight of the smaller animals. Instead of injecting the lymph into the thigh, it should be put behind the shoulder for cattle, and in the neck of the horse, ass, and mule, care being taken to place it where the collar will not press upon the marks.

6. The skin of large animals is very difficult to pierce with a needle; care must be taken, therefore, to make the puncture in an exact line with the syringe to avoid a bruise. It is a good plan also to make a small fold of skin with the left hand by way of facilitating the introduction of the needle. The same needle which has been used for sheep should not be used for the larger animals, and for safety's sake a stronger needle for operating on them is put into the box with the syringe.

7. It is most important that the vaccinal liquid should be in a condition of *perfect purity* when it is injected under the skin. If it be impure, that is to say, if it were contaminated by water which had not been boiled, or by dust or other foreign substance, there would be injected into the animal only the mild virus, but other organisms, possibly those of erysipelas or septicæmia (for example), which might give another disease, or the inoculation might be hindered. *The liquid as sent is quite pure*, and may be drawn directly into the tube, but it is necessary that the syringe also should be pure. New syringes which have never been used are so, but after they have been employed for one inoculation they should be replaced by fresh ones. *The operation is an exceedingly delicate one*, and the syringe should be repaired and cleaned before it is used again. In one word, a syringe should not be used a second time after some days have elapsed since it was first employed, until it has been thoroughly cleansed.

8. *The lymph should be put as soon as possible in a cellar to keep it cool, and a tube which is open one day should not be employed on the following or succeeding days. Consequently the contents of every tube which is opened should be used the same day, and any matter which remains should be rejected without hesitation.*

9. If an operator is pressed for time, or has too many animals to inoculate, he may do his work in a hurry; then there is a danger that the needle may pass over the skin instead of piercing it, and shoot the vaccine outside; or he may neglect to remove the marker, and from that time he may push the piston, but the lymph will not be injected under the skin. Under these circumstances, as there is a doubt about the first inoculation, there is a danger that since the first vaccine has not been introduced into the system, *the second vaccine, being more active may cause death.*

10. Great care should be taken also to prevent animals which are being inoculated with the first vaccine from escaping too soon out of the hands of the assistant who is holding them. They may mingle with the flock or herd, and then have an injection of the second vaccine before they have been partially preserved by the first, and in this way accidents may arise.

11. There is another mischance to be guarded against, namely, that the air in the tube must never be at the needle end. If it were so, the operator might push the piston, but air only, not lymph, would escape, and thus the inoculation would not be accomplished. *This accident is of frequent occurrence.*

12. Cattle and buffaloes have not hitherto exhibited a tumour at the points inoculated. Horses, especially young horses, had sometimes had tumours more or less extensive, but they always subside with tolerable quickness without any treatment whatever. The experiment of inoculating young horses three times has been made, that is, twice with the first vaccine and once with the second, but not the slightest tumour has been produced. Proofs of this kind continued to increase. It may be that this is the best method of inoculation for these animals.

LIBERALITY OF BABOO RAJ MOHAN RAI CHOWDHURI

GENERAL DEPARTMENT.—EDUCATION.

Darjeeling, the 30th June 1885.

RESOLUTION.

READ—

The correspondence ending with a letter from the Director of Public Instruction, No. 67., dated the 4th May 1885, regarding the endowment by Baboo Raj Mohan Rai Chowdhuri, a zemindar of Taki, in the 24-Pergunnahs, of the Aided English High School at Taki.

In 1878 Baboo Raj Mohan Rai Chowdhuri, Member and Secretary of the Taki High School Managing Committee, offered to endow the Taki School with an income of Rs. 300 per year, and to build a masonry school-house on condition that Government would undertake to maintain the school in perpetuity as a Government school. He asked that Government should continue to make an annual grant to the school of such sum as might be thought proper, and that if the total revenue of the school should become in the future insufficient to maintain a high school, a Government middle class school should be established; or if this, too, should be found to be impracticable, that the Taki School should still exist as a vernacular school. He also asked that Government should give a piece of land as a site for the school-house which he proposed to build. The Government having accepted Baboo Raj Mohan Rai's liberal offer, and having sanctioned a net grant to the school of Rs. 90 per mensem, the Educational Department took over the school as a Government high school from the 1st April 1881. A piece of land was also acquired by Government at a cost of Rs. 1,229-7 for the new school building; and upon it Baboo Raj Mohan Rai Chowdhuri has, as promised, built a new school-house, at an estimated outlay of Rs. 10,000. Government has recently made a grant of Rs. 1,000 for furniture for the new building.

2. On the 10th May 1885, Baboo Raj Mohan Rai Chowdhuri made over to the local authorities Government securities to the amount of Rs. 7,500, yielding an annual income of Rs. 300, in place of landed property of this value which he had assigned to Government for the support of the school in 1881. Thus, through the public spirit of Baboo Raj Mohan Rai Chowdhuri, the people of Taki and its neighbourhood are secured special advantages in the way of education; and the Lieutenant-Governor desires that, in consideration of this fact, the thanks of Government be conveyed to Baboo Raj Mohan Rai Chowdhuri for his liberality. The Lieutenant-Governor also desires that a tablet be erected in the Taki School building to commemorate this liberality.

By order of the Lieutenant-Governor of Bengal,

A. P. MacDONNELL,

Secretary to the Government of Bengal.

LIBERALITY OF SYED ASGAR REZA AND BABOO KUNJO LAL IN CONNECTION WITH A DISASTROUS FIRE WHICH RECENTLY BROKE OUT AT KISSENGUNGE IN PURNEAH.

No. 992J.D., dated Darjeeling, the 17th June 1885.

From—F. B. PRACOCK, Esq., Secretary to the Govt. of Bengal, Judicial Dept.,
To—The Commissioner of the Bhagulpore Division.

I AM directed to acknowledge the receipt of your letter No. 1165J. dated the 28th ultimo, forwarding copy of a report, and its enclosure, from the Magistrate of Purneah, on the subject of a disastrous fire which recently broke out at Kissengunge in that district.

2. In reply, I am to say that the liberality displayed by Syed Asgar Reza and Baboo Kunjo Lal in promptly responding to the call of the sub-divisional officer for subscriptions towards the relief of the sufferers, and in distributing a quantity of food and clothes among them, was highly commendable. I am to request that you will be so good as to convey the acknowledgments of the Lieutenant-Governor to these gentlemen, as well as to all others who have assisted in alleviating the distress which the fire has caused.

3. I am at the same time to observe that Baboo Gossain Das Datta, the sub-divisional officer of Kissengunge, appears to have worked with praiseworthy energy and judgment. The Lieutenant-Governor desires that an expression of his satisfaction may be conveyed to that officer.

4. I am to add that this correspondence will be published in the Supplement to the *Calcutta Gazette*.

No. 1165J., dated Bhagulpore, the 28th May 1885.

From—G. N. BARLOW, Esq., c.s.i., Commissioner of the Bhagulpore Division and the Sonthal Pergunnahs,
To—The Secretary to the Government of Bengal, Judicial Department.

I HAVE the honour to forward to you herewith copy of a report, No. 1220J. of the 18th instant, and its enclosure, from the Magistrate of Purneah on the subject of a disastrous fire which broke out on the 22nd ultimo at Kissengunge in that district.

2. I think that the liberality of Syed Asgar Reza and of Kunjo Lal (agent of Luchiram), as well as the efforts of other subscribers and the relief committee, may be acknowledged by Government. The sub-divisional officer seems to have acted promptly and judiciously.

No. 1220J., dated Purneah, the 18th May 1885.

From—A. WREKE, Esq., Magistrate of Purneah,
To—The Commissioner of the Bhagulpore Division.

I HAVE the honour to report that on the 22nd ultimo a most disastrous fire broke out and consumed almost the whole of the town of Kissengunge, including most of the masonry houses, and that forty-five women and children and five men lost their lives. About fifty persons were injured more or less from burns, most of whom are expected to recover. The fire began in some stable of Syed Asgar Reza, at about 1 o'clock in the day, when the unusually hot and furious wind we used to have at that time was raging. The fire in a few moments passed the bridge and river and involved the whole of the town, and there was not only no chance of stopping it, but the street was so hot as to be impassable, and the women and children, who hesitated a moment as *pardanashin* to leave their houses, were unable to do so, and this seems the reason that so many women and children, in proportion to men, were killed. On receipt of the information on the 23rd, I wrote to the sub-divisional officer of Kissengunge to call a meeting of *semindars* and other well-to-do persons and raise subscriptions to relieve the houseless, poor and others who were temporarily without shelter or food.

His call was generously and promptly responded to by Syed Asgar Reza and Baboo Kunjo Lal, Luchiram, and many others, and the two former distributed a quantity of food and clothes to the sufferers. Rupees 3,366 was promptly collected and a committee formed to distribute the relief thus afforded. The sub-divisional officer tells me he received great assistance from Mr. Wadechow, Personal Assistant to Syed Asgar Reza, in the

distribution of relief; and he was also very energetic and active, and rendered great assistance in endeavouring to stop the fire. Unfortunately his mother died very suddenly during his absence at the scene of the fire. The loss of merchandise is roughly estimated at Rs. 1,48,855, and this does not include furniture and other property, including cattle.

I take this opportunity to bring to your notice the liberality of Syed Asgar Reza and of Baboo Kunja Lall, agent of the firm of Lachiram. The latter has, besides his liberal subscription, also promised to construct two deep large wells for the protection of the town at a cost of Rs. 2,000 to Rs. 3,000.

It appears that the origin of the fire was the carelessness of a Eurasian jockey, who placed his pipe too near some thatch; but the main cause of the fire was the terrific hot wind which was blowing like a hurricane, in a way quite unprecedented, and the extreme dryness of the country.

I have asked the sub-divisional officer to see whether the jockey ought not to be put on his trial for carelessness with regard to fire.

I believe that some kerosine oil in some of the houses contributed to swell the conflagration and made it more destructive, and have directed the sub-divisional officer to call on the seller of such oil to take proper action with such property, and to store it at a safe distance in a place to be approved of by the sub-divisional officer.

I have the honour to append a copy of a report from the sub-divisional officer, received on the 12th instant.

No. 148, dated Kissengunge, the 10th May 1885.

From—BABOO GOSSAIN DAS DATTA, Sub-Divisional Officer of Kissengunge,
To—The Magistrate of Purneah.

It has been ascertained by the police that an Eurasian jockey in the employ of Syed Asgar Reza, zemindar, smoked and kept his hooka inclined to the tattie of the stable house, whence the fire arose; and as the west wind was blowing very high at that time, so the straw thatching of the stable, getting loose with the wind, was blown away with the fire to the thatches of the neighbouring houses, whence again loose bundles of straw on fire were blown across the river to the other side of the town, and within half an hour the whole of the town was in a blaze. The dust-storm was very strong, and nobody could see the roads properly, and everybody got confused and knew not what to do or how to help himself: the owners of the brick-built houses could not close their windows, and masses of straw on fire entered the houses by the windows, and everything inside the houses caught fire. Able-bodied men ran away with only one dhooti and a shirt which they had on their body, and women and children collected in large numbers inside houses built with mud walls and covered with mud roofs, and these broke down and fire entered into them, and they got very much heated by the surrounding fire, and the inmates died of suffocation and heat.

2. It has been ascertained that 50 persons died immediately from the effects of fire, 45 of whom were women and female children and five men: besides these, about 50 other persons got partially burnt, and most of these men will recover.

3. The fire commenced at about mid-day, but continued to burn inside pucca houses for three days continually. On the first day, from 12 o'clock noon up to 7 P.M., it was impossible for anybody to proceed near the houses. On the following morning the fire in thatched houses was extinguished, and the people looked quite in despair. They were without food during the previous day, and there was no grain in the bazar for purchase. So I issued orders inducing some of the shopkeepers of Khagra to go with rice, choora, moory, &c., to the town of Kissengunge, and asked Baboo Kunja Lall, agent of the richest merchant here, Baboo Lachiram, and Syed Asgar Reza, zemindar of Kissengunge, to give out something in alms to the poor in the shape of food; and Baboo Kunja Lall and Syed Asgar Reza gave out 40 bags of rice or 80 maunds to anybody who asked for the same for his food, and this was of great use. Syed Safdar Reza, step-brother of Syed Asgar Reza, also gave out some rice, and everybody in Khagra, Bhariadangi, Chakla and other adjoining places went with food and clothes to help their friends and the needy. I also issued notices in the neighbouring villages and police stations and outposts calling for grain-dealers, &c., to come to Kissengunge with their grain for sale. The scarcity of food-grains continued for two days, after which abundance of grain was to be seen in the Kissengunge bazar, and there was no difficulty at all on account of want of food.

4. Eight hundred and fifty-one families suffered from the effects of the fire, including several well-to-do mahajans and shop-keepers, and the following is a statement showing what the richer merchants and shopkeepers lost.

52. Hatkooora ...	100			
		Total	1,48,855	

This shows the loss of articles of merchandise only. Besides this household property, including clothes, beds, brass utensils, food-grains, cattle, poultry, &c., was for the most part burnt to ashes, and I approximately make out the total loss to be about two lakhs and twenty-five thousand rupees.

5. On the day following the date of the conflagration the town was giving out a bad smell, almost suffocating, and sickening to the extreme from the existence of half-burnt carcasses of animals, poultry, and men, and nobody would take out the dead bodies of men for fear of losing his caste, as the dead bodies of both Mahomedans and Hindoos were all mixed up in several places. Mehters and Chamars had therefore to be at once engaged to clear out the carcasses and to bury the same at a distance, and for this purpose I gave out Rs. 25 out of my own pocket as an inducement to others to come forward to help the poor and to clear out the town, and 60 Chamars and 15 mehters were at once engaged to clear out the carcasses of dead animals, and to clear the town and private houses.

6. Two days after I called a meeting of the rich zemindars and mahajans of this sub-division in order to raise subscriptions for helping the poor in rebuilding their houses, and subscriptions to the amount of Rs. 4,625 were at once promised. Syed Asgar Reza, zemindar of Kissengunge, headed the list and promised to pay a sum of Rs. 3,000. Baboo Kunjo Lal, agent of Baboo Lachiram, Rs. 1,000 besides these the following gentlemen promised amounts noted against the name of each :—

	Rs.		Rs.
Baboo Tara Chand ...	100	Mia Elahi Bux ...	25
" Lall Chand ...	51	Munshi Pana Ali ...	10
" Woodi Chand ...	51	Moulvi Nooral Hnq, Pleader ...	10
Mia Mazaher Ali ...	100	Munshi Himut Ali, Mooktear ...	5
Kokalal Moodi ...	150	" Ekun Ali ...	10
Kalimuddin ...	25	Baboo Dya Singh ...	5
Mr. Wadachow ...	22	Moulvi Bahadur Ali ...	5
Baboo Gossain Das Datta ...	25	Munshi Feda Ali ...	2
" Bhojram Singh ...	25	" Abdul Wahed ...	4

7. The subscriptions from the persons noted in the margin have been paid up in full, and Syed Asgar Reza has up to date paid

	Ra.
Baboo Kunja Lall	1,000
" Tara Chand	100
" Lall Chand	51
" Woodi Chand	51
Mia Masaher Ali	100
Kokalal Moodi	150
Kalimuddin	25
Mr. Wadschow	22
Baboo Gossain Das Datta	25
" Bhojram Singh	25
Total	1,549

up Rs. 1,817 out of his share of the subscription. The total collection of subscriptions has been up to date Rs. 8,366. Out of this amount relief operations were commenced from the 2nd of May current, and 628 families have up to date been relieved. Each poor man was given Rs. 5 to Rs. 10, according to the number of persons in his house, besides six yards of cloth to each woman and two yards to each child. Rs. 8,278-2 have thus been given out to the poor people to rebuild their houses,

besides Rs. 60 have been spent in clearing out the carcasses of dead animals and in burying them, and at present only five mehters have been kept to clear out the private dwelling-houses and streets of the town.

8. There are now about 175 women who are to be relieved, and the amount due to these persons has been made over to a sub-committee consisting of Baboo Kunja Lall, Baboo Mohim Chandra Somaghati and Baboo Kokalal Moodi: these women did not come out in public to receive their quota, so the sub-committee will pay the amounts due to them at their homes.

9. The relief to the poor was distributed in presence of a committee consisting of the following gentlemen, with myself as President of the same:—

1. Baboo Gossain Das Datta	President.
2. Mr. A. G. M. Wadschow	Members.
3. Baboo Kunja Lall	
4. „ Lall Chand	
5. „ Woodi Ram	
6. „ Tara Chand	
7. „ Mohim Chandra Somaghati	
8. „ Kokalal	

and I am glad to inform you that the members have all exerted themselves to bring the relief operations to an end as quickly as possible, and up to date nearly two-thirds of the houses have been rebuilt.

10. I take this opportunity to bring to your notice that Baboo Kunja Lall, the agent of the richest merchant here (Baboo Lachiram), has, besides his liberal subscription of Rs. 1,000, promised to make two deep wells with reservoirs for water for the future safety of the town at a cost of Rs. 2,000 to Rs. 3,000 from his own pocket, and I think Government ought to take some notice of the liberality and public spirit of Baboo Kunja Lall and Syed Asgar Reza.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 4th July 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
Burdwan Divn.	1 Burdwan, July 4 '85	1.60	Weather—seasonable. Prospects good. Price of rice 11½ to 14½ seers per rupee. Public health good.
	Culina ...	2.18	
	Ranoengunge ...	1.69	Weather—hot and rainy. Cultivation of <i>amun</i> going on in places. Prospect of crops favourable. Sowing of early rice almost completed. Health good.
	2 Bankoora, " 4 "	1.45	
	Bishenpur ...	0.35	
	3 Beerbhoom, " 4 "	1.37	Weather—cloudy with occasional rain. Prospects of rice crop continue good ploughing and sowing, and in some places transplanting, in progress. Price unaltered. Cholera still prevalent in the Sudder sub-division.
	Rampore Hat ...	2.55	
	4 Midnapore, " 4 "	1.81	Weather—sultry with occasional heavy rain. Ploughing and transplanting of paddy in progress. Health good.
	5 Hooghly, " 4 "	0.83	Weather—less rainy than usual. Prospects so far fair, but more rain wanted in Jehanabad. Prices steady. Public health good.
	Scrampore ...	1.16	
Presidency Divn.	Jehanabad ...	0.45	Weather—seasonable. State and prospects of crops very satisfactory. Public health good.
	Howrah, " 6 "	1.55	
	Oolooberiah ...	3.87	
	24-Pergha, July 6 '85	
	7 Nuddea, " 4 "	1.77	Weather—hot with close showers. Prospects of early rice and jute continue good. Lands being prepared for <i>amun</i> paddy, the seedlings of which are doing well. Public health generally good.
	Kooshtea ...	2.17	
	Meherpur ...	0.67	
	Chooananga ...	0.77	Weather—rainy and cloudy. Prospects of paddy and other crops appear to be good.
	Ranaghat ...	3.03	
	8 Khoolua, " 4 "	1.16	Weather—cloudy and sultry; not much rain. <i>Amun</i> paddy and <i>amun</i> seedling doing well. Public health good.
Rajshahye Divn.	9 Jessore, " 4 "	1.90	Weather—cloudy and hot. Prospects of paddy continue favourable, although insects are doing injury to the plants in certain places. Health improved.
	Jhenida ...	1.71	
	Magoora ...	1.66	
	Narail ...	2.03	Weather—seasonable. Prospects of <i>amun</i> rice are fairly good; sowings almost completed. Land being prepared for <i>amun</i> rice. Common rice selling at from 11 to 13½ seers per rupee. Public health fair.
	Bongong ...	2.76	
	10 Moorshedabad, " 4 "	0.84	
	Dinapore, July 3 '85	4.49	
	12 Rajshahye, " 4 "	2.10	Days of alternate sunshine and heavy showers. Crops reported from everywhere to be doing well. Insects reported in Patnitolla. Sporadic cholera in Patiram.
	Nattore ...	2.68	
	Nowgong ...	2.92	
	13 Kungpore, " 4 "	1.74	Weather—cloudy and showery. Prospects of <i>amun</i> paddy, jute, <i>til</i> and sugarcane generally fair. Preparation for <i>amun</i> paddy still continues. Price of rice about 12 seers per rupee. A few sporadic cases of cholera still reported, and 7 deaths from small-pox occurred in Raninagore ourpost.
	Nilphamari ...	3.03	
	Gaibanda ...	1.06	
	Kurigram ...	1.86	Weather—hot and cloudy with occasional rain. Prospects of crops good. <i>Amun</i> crop is being cut in some places; transplanting of <i>amun</i> has commenced. Price of rice rising. Cholera has considerably abated, but fevers, chiefly of severe intermittent type, are increasing.
	14 Bogra, " 4 "	4.04	
	15 Pubna, " 4 "	2.87	There has been good rain, but the weather has been close. Prospects of <i>amun</i> paddy good; jute and sugarcane thriving. Sowing of <i>amun</i> paddy going on, but more rain is wanted. Public health fair.
	Serajunge ...	2.23	
	16 Darjeeling, " 4 "	9.62	Weather—very hot and rainy. Crops excellent. They may be late, but will be good.
	17 Julpigoree, " 4 "	7.05	Weather—wet and warm. State and prospects of crops excellent.
			Weather—heavy rain towards the close of the week, with great fall of temperature. Prospects of all crops favourable. Cattle-disease is bad in some parts of the district. Cholera has broken out in a virulent form at Damdin.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL—consolid Eastern Districts.			
Dacca Division.	18 Dacca, July 4 '85	2-27	Weather—first part of the week hot; latterly cooler. <i>Ass</i> paddy being harvested. Jute plants, <i>amra</i> , and sugarcane thriving. Lands being cultivated for <i>roachia</i> paddy. Prospects of crops and public health good.
	Manickgunge	2-12	
	Munshigunge	0-54	
	Narsingunge	4-07	
	19 Furreepore, " 4 "	2-23	Weather—seasonable. Prospects of crops good. Public health fair.
	Madaripore	1-05	
	Goalundo	2-43	
	20 Backergunge, " 2 "	1-91	Weather—hot. Rain during first four days of the week. Prospects of crops good. Cholera still prevalent.
	21 Mymensingh, " 3 "	2-31	
	Jamalpur	1-90	Weather—hot. Prospects of rice and jute good. Public health good.
CHITTAGONG DIV.	Kishoregunge	2-59	
	Attia	0-37	
	Netrokona	1-75	
	22 Chittagong, July 7 '85	7-94	Weather—seasonable. Sowing of <i>ass</i> paddy completed. Lands being prepared for <i>amra</i> paddy. Prospects generally good. Prices changeable. Cholera lingers. Cattle-disease reported.
	23 Noakholly, " 3 "	5-46	
	Fenny	4-02	Weather—cloudy and rainy. State and prospects of crops good. <i>Ass</i> is being reaped in some places. Public health good.
	24 Tipperah, " 2 "	1-13	
	Brahmanbarah	0-72	Weather—cool with frequent light showers. The comparative cessation of rain for the past fortnight has saved a large proportion of the submerged crops. The inundation has drained off, but a moderate proportion of the paddy has suffered irretrievable injury. The exception is in the case of the head-quarters thana, where the loss is enormous.
	Chandpore	1-05	
	25 Chittagong Hill Tracts, June 30 "	0-79	Weather—very hot; occasionally cloudy with slight showers. Rain very much wanted for <i>joom</i> paddy and cotton crop, which are suffering somewhat. Land being ploughed for late rice crop.
BEHAR.	Hill Tipperah, July 1 "	0-35	
	26 Patna, July 4 '85	3-05	Weather—cloudy and much cooler. Rain fell heavily during the last two days of the week. Agricultural operations progressing. Prospects much improved. Sowing of paddy commenced. Public health generally good.
	Behar	1-10	
	Dinapur	2-45	
	27 Gaya, " 4 "	1-07	Good rain at the Sudder station on the 2nd and 3rd, which probably extended over a large portion of the district; weather still cloudy. Indian-corn is being sown, and <i>marwa</i> being transplanted. Recent rain will also facilitate the preparation of paddy seedlings. Prospects fair. Prices have risen slightly at Nawada, but are elsewhere stationary. Public health good.
	28 Shuhabad, " 4 "	2-57	
PATNA DIV.	Buxar	3-92	Weather—cloudy with east wind. Sugarcane doing well. Preparation of fields for <i>bhadoi</i> progressing satisfactorily, but more rain is wanted in some places. Rice and millet are being sown. Cholera reported from Buxar, Bhabuah and Sasaram.
	Bhabbhua	0-78	
	Sasaram	3-00	Weather—latter part of the week cloudy and showery; heavy rain on the 3rd. Rain has been most useful. <i>Bhadoi</i> cultivation progressing favourably. Paddy seedlings coming on well. Prices remain stationary. Cholera abating.
	29 Durbhanga, " 4 "	0-50	
	Tajpur	2-28	Weather—very hot and sultry during the most part of the week; at present cloudy and more rain expected. Rain which fell on the 2nd, 3rd, and 4th seems to have been pretty general throughout the district, and has done much good to the crops, and enabled the cultivators to sow their <i>bhadoi</i> . Prices stationary. Public health fair.
	30 Mozufferpore, " 4 "	1-02	
	Hajipur	7-09	Weather—oppressively hot with west wind, and very little rain until yesterday (3rd), when good rain fell. Rainfall of 3rd and 4th has been general. It has been of great benefit for the <i>bhadoi</i> sowings and to the indigo crop throughout the district, but more is still required for transplanting. A few sporadic cases of cholera, fever, and small-pox reported; public health otherwise good.
	Sitambarhi	0-24	
	31 Saran, " 4 "	0-29	Weather—cloudy and rainy. Sufficient rain has fallen and has greatly benefited <i>bhadoi</i> and <i>aghani</i> crops, and facilitated sowing of <i>bhadoi</i> and paddy. Prices stationary. A few cases of cholera and small-pox reported; public health otherwise good.
	Sewan	1-89	
BHAGULPORE DIV.	Gopalgunge	0-03	Weather—exceedingly close and oppressive for the greater part of the week; cooler for the last two days; skies overcast. <i>Bhadoi</i> sowings are rapidly being completed, and the crop promises well. Sugarcane also thriving. Paddy sowings have commenced. Rivers rapidly rising. Prices steady. Public health fairly good.
	32 Champaran, " 4 "	0-43	
	33 Monghyr, July 4 '85	5-02	Prospects have much improved. Agricultural operations being carried on vigorously. Prices stationary, excepting that common rice is a little cheaper in the north than it was last week. Public health good.
	Begusarai	1-98	
	Jamui	0-67	Weather—very hot during first-half of the week, then wet and cooler. All crops doing well. Health fair.
	34 Bhagulpore, " 4 "	1-72	
	Soopole	3-18	Weather—seasonable; very heavy showers on the 2nd and 3rd. Prospects of all crops much improved, but more rain is still wanted. In thana Nowabgunge transplanting of winter paddy has begun. Common rice selling at from 12 to 16 seers per rupee. Public health generally good.
	Mudehpurah	0-21	
	35 Purnea, " 4 "	2-23	Rain too much to be favourable to the <i>bhadoi</i> crops, and a spell of sunshine is now required. A good deal of cholera about here and there.
	Banks	2-24	
BHAGULPORE DIV.	Kissengunge	1-52	
	Arracah	0-73	
	36 Maldah, " 4 "	2-79	
	Chanchal	6-15	
	37 Sonthal Pergas, " 4 "	6-11	
	Godda	3-93	
	Kajmehal	2-31	
	Jamtara	0-50	
	Pakour	2-00	
		3-07	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, July 3 '85	0.88	Weather—hot and unseasonable. The rivers have now fallen, but the floods were very high and many breaches in the embankments have been reported. The extent of injury to the crops is not yet known, as the low lands are still under water. Rain is wanted for the high lands. Sugarcane crop in Banki has almost entirely been lost by the floods. Prices are rising. Public health generally good.
	39 Pooree, " 2 "	0.79	Weather—hot and cloudy. Heavy floods have caused numerous breaches in the river embankments and roads. <i>Sarad</i> crops have been much damaged in the flooded lands. Rain is wanted for the puddling of paddy plants in places where the lands have not been flooded. Common rice selling at an average of 19 seers 11 chittacks per rupee in the Sudder sub-division, and 20 seers 6 chittacks in the Khoorda sub-division. Cholera reported from town. Telegraphic communication interrupted by the floods.
	Khoorda " ...	0.29	
40 Balasore " 3 "	1.37	Weather—hot and cloudy. More or less rain throughout the district. Agricultural operations progressing favourably. A few sporadic cases of cholera public health generally good.	
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, July 3 '85	3.68	Weather—seasonable. General rain reported and ploughing and sowing are in progress. Cholera in the Hazaribagh jail has abated.
42	Lohardugga, " 4 "	3.48	Weather—seasonable. Heavy rain during the week, with a three days' break in the middle of it. Ploughing and sowing being carried on actively, and so far the weather has been all that was desirable. Prices stationary. Public health good.
43	Singbhoom, " 3 "	4.24	Weather—seasonable. Rain has fallen all over the district. Agricultural operations are being vigorously pressed on. Paddy has germinated well and sowing still continue. General health good.
44	Manbhoom, " 4 "	2.24	Weather—hot, but cloudy. Rain throughout the district has improved prospects. Ploughing and sowing going on vigorously; amass seedlings are up. Prices of food-grains very high. Cholera still prevalent in the district including the Purulia town.
	Govindpore " ...	2.99

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 3RD OF JULY 1885.

THE small cyclonic storm which had formed off the Sunderbuns during the previous week was on Friday the 26th of June at 10 A.M. to the south of Saugor Island. During the afternoon or night of this day, it advanced across the Balasore coast, and on the Saturday morning its centre was to the west of Midnapore. It again advanced in a westerly direction through the south of Chutia Nagpur, though gradually becoming more feeble, and on the Sunday, so far as can be judged by the wind directions, it still existed in the west of Chutia Nagpur, probably to the west of Ranchee. It was, however, at this time probably rapidly filling up, and it ceased to affect the meteorological conditions of the Province after this day. With the north-westerly movement of this storm a fairly strong advance of the monsoon winds took place over Bengal, and on the Saturday rain in considerable quantities fell in every district and almost at every station, except at a few in Behar. Rain was also general on the Sunday, but less general than on the previous day, and this was particularly noticeable at the stations in South Bengal and Orissa. With the advance and probably also the disappearance of this cyclonic storm on the 29th, the wind system in Bengal underwent a very considerable change, and a strong westerly current set in over the western districts, driving back the easterly and south-easterly currents which had prevailed with slight exceptions since the setting in of the south-west monsoon. These westerly winds of course brought up comparatively little moisture, and with their advance over the western districts rain to a great extent ceased, though in east and in parts of North Bengal the south-easterly and easterly winds were still blowing, and these gave showers in these districts. At the same time, however, a strong monsoon current was blowing over the centre and south of the Bay, and while the advance of the westerly winds was in progress over the western part of the Province, it was also evident that another advance of the Bay of Bengal monsoon current, bringing with it a heavy wave of rainfall, was forcing its way up the east coast of the Bay. Thus on the 29th Diamond Island received nearly seven inches of rain, and on the following day Akyab received between four and five inches also. This wave of rainfall commenced to spread itself over the province on the 1st and 2nd of July, and with its advance heavy rain fell over East and North Bengal, Behar, and Chutia Nagpur, while the rainfall in South-West Bengal and Orissa was decidedly lighter. These conditions have continued till the close of the week, and during this period a kind of contest has been going on between the south-easterly and easterly current, which has been blowing from the Bay of Bengal over East and North Bengal on the one hand, and the westerly current which has been blowing across India from the Bombay side on the other. These opposing wind currents, by their interaction, must necessarily create a certain amount of ascensional air motion, and thus rainfall has been caused which in many places was very heavy during the latter end of the week. With the disappearance of the small cyclonic storm, and with the setting in of westerly winds previous to the stronger advance of the monsoon current from the Bay, a period of comparative absence of rain set in over the Province, and there was thus a very partial break in the rains from about the 29th June to the 2nd of July, but of course the slight break was rapidly put an end to by the advance of the wave of rainfall above described.

Pressure.—The changes of pressure for the first two days of the week were mainly dependent on the formation and advance of the small cyclonic storm above mentioned. During its advance pressure fell at those stations affected by it, but with the further westerly advance a rapid rise of the barometer took place which in some instances amounted to nearly two-tenths of an inch. With the rapid rise of the barometer, which then took place, pressure became above the normal in all districts except South Behar. On the disappearance of the storm, pressure at first gave way for two days, and then a somewhat rapid rise took place for the same period, which neutralized the previous fall, and pressure became above the normal at the close of the week. On this day the excess pressure varied from 0.07" at Cuttack to a nearly normal pressure at Chittagong. In the report for the previous week, it was stated that the average defect of pressure from the normal, was no less than 0.086" while during the present week the variations from the normal have been comparatively small, and the average defect has been considerably less than a hundredth of an inch, so that the average pressure of the Province may be said to have been normal.

Temperature.—The changes of temperature have not been of much importance during the week, and they have of course to a considerable extent followed the distribution of rainfall. The average temperature over the whole Province has been 1.4° in excess of the normal, while during the previous week it was in defect by an almost corresponding amount.

Winds.—At the commencement of the week were almost of normal direction, except in the immediate neighbourhood of the small cyclonic storm noticed above, round which very distinct cyclonic circulation of wind was noticeable. With the advance of the storm, monsoon winds of ordinary strength began to blow over the Province up to the 29th, when the westerly current advanced across Central India and began to make itself felt in the western districts of Bengal, gradually driving back the south-easterly and easterly currents from the Bay of Bengal. On the 30th of June and 1st of July the westerly current steadily gained ground, but on the 2nd and 3rd it retreated again, being forced back by the advance of the Bay of Bengal monsoon current, and on the latter day westerly winds were only reported from Chutia Nagpur and from one or two stations in

by the small cyclonic storm, wind velocities have been comparatively small. At almost all stations therefore wind velocities have been below the normal, as is shown below by taking the numbers registered at five or six typical stations:—

STATIONS.				Actual daily wind velocity for week; miles per day.	Normal wind velocity for June; miles per day.
Chittagong	137	169
Jessore	106	119
Calcutta	128	152
Patna	90	95
Hazaribagh	232	212
Cuttack	55	95

Rainfall was fairly general over the whole Province on the 27th and 28th of June, and again at the close of the week on the 2nd and 3rd July. As has been before explained, there was a very partial break in the rains for about three days in the middle of the week. On Saturday, the 27th, the heaviest rainfalls were reported, naturally from the districts influenced by the small storm. Thus on this day Saugor Island received 3·54 inches, Satkira (Khoolna district) 2·8 inches, Hazaribagh 3·64 inches, and Ranchee 2·83 inches. Rainfall was again general on the 28th, but the amounts which fell were generally smaller in quantity, and there was a distinct tendency to cessation of rainfall in the western districts of South-West Bengal. From this day up to the 2nd of July only local showers, generally of small amounts, fell except in the hill districts, where the rainfall was more general. With the advance of the monsoon current towards East and North Bengal, as before described, rain became general over the whole of Bengal, though the largest amounts were received in the eastern and northern districts. Thus on Thursday, the 2nd, Julpigoree and Siligoree received 5·48 inches of rain, Buxar 4·5 inches, Darjeeling 4·05 inches, Maldah 3·8 inches, Bhola 3·41 inches, Naraingunge 3·34 inches and many stations amounts larger than two inches. On the Friday, the heavy rainfall advanced over Behar, and on this day Mozufferpore reported 5·2 inches, Sewan 3·26 inches, Arrah 3·2 inches, Tajpore 3·05 inches, and Sitamarhi 3 inches, while many stations received about two inches.

Rainfall has thus been received on an average of nearly four days during the week, which is about equal to the normal condition of things. East Bengal, North Bengal, Behar, and Chutia Nagpur have received a rainfall in slight excess of the normal, while South-West Bengal shows a fall decidedly smaller than the normal, and Orissa largely below the normal. The average rainfall over North Bengal has been 3·85 inches against the normal 2·96 inches or a fall equal to 130 per cent of the normal. North Behar has received 3·11 inches against 2·73 inches or 114 per cent of the normal. South Behar has received 2·71 inches against the normal 2·52 inches or a fall equal to 111 per cent. East Bengal has received 3·30 inches against the usual fall of 3·20 inches which is equal to 103 per cent. Chutia Nagpur has registered 2·96 inches against the normal 2·82 inches, which is 105 per cent of the normal. South-West Bengal has received 1·87 inches against the average amount of 2·20 inches or 89 per cent of the normal; and finally Orissa has only received 1·53 inches against 3·54 inches which is 43 per cent of the normal quantity.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 3rd of July 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of June.		Since 15th May 1885.

The total fall from 1st January to 4th July 1885 ... 21.48
The average fall of the corresponding period for 24 years, S. G.'s Office ... 23.64

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h. 10h. 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Alipore Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph. The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, t thunder, p passing temporary showers, d drizzling rain, < lightning, Δ dew.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.5 higher; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

ALEXANDER PEDLER,

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 6th July 1885.

MEMORANDA.

From the annexed table exhibiting the vital statistics of the principal Municipalities in Bengal for the week ending 20th June 1885, it appears—

1. That births and deaths were registered in these Municipalities in the proportions per 1,000 of population of 20·2 and 33·1, respectively, as opposed to 23·5 and 32·2 per 1,000 respectively, during the preceding week ending 13th June, indicating a considerable falling off in the record of births with a small increase in that of deaths.

2. That these events were recorded in the highest proportions in the following Municipalities:—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Chittagong	46·9	Durbhanga	159·7
Gya	41·7	Mozufferpore	42·5
Utterpara	37·8	Gya	41·1
Bhagulpore	36·2	Bhagulpore	39·8
				Purneah	38·1
				Burdwan	36·6
				Suburbs of Calcutta	30·2

3. That the mortality from the specific death-causes, mentioned in the table appended to this memoranda, compared with similar information for the preceding week, stood as follows:—

			Ratio per mille during the weeks ending—	
			20th June 1885.	13th June 1885.
Cholera	9·2	7·0
Small-pox	8	8
Fever	11·6	11·5
Bowel-complaints	1·2	1·8
Injury	9	5
Other causes	7·4	7·5

The only noticeable fact revealed by the above figures is that the death-rate from cholera had risen sensibly.

4. That referring to the death-causes above indicated, while bowel-complaints prevailed with normal severity in all the Municipalities (excepting in Durbhanga, where 11·8 per 1,000 of its population died from the disease), the rest proved most fatal to life in the following Municipalities:—

<i>Cholera.</i>		<i>Small-pox.</i>		<i>Fever.</i>		<i>Injury.</i>		<i>Other Diseases.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Durbhanga ...	115·6	Mozufferpore ...	4·9	Purneah ...	31·6	Chupra ...	7·8	Poori ...	18·9
Mozufferpore ...	6·1	Dacca ...	3·2	Burdwan ...	25·9	Gya ...	4·8	Bhagulpore ...	16·3
Bhagulpore ...	5·4							Gya ...	14·3
Patna ...	4·9							Durbhanga ...	12·6
Suburbs of Calcutta ...	3·5							Suburbs of Calcutta ...	11·2
Dacca ...	3·2								

It will be seen that cholera continued to prevail with added severity in the Durbhanga Municipality, in comparison with its incidence during the preceding week.

5. That in relation to *Sex*, *Class* and *Age*, the mortality of the week is stated to have been distributed as follows:—

<i>According to Sex.</i>			<i>According to Class.</i>			<i>According to Age.</i>		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	30·7	Christians	34·8	Under 1 year	258·9
Females	35·7	Hindus	34·9	1 and under 5 years	61·1
Ratio of male deaths to every 100 female deaths	97	Mahomedans	28·6	5 " 10 "	30·1
			Budhists	24·1	10 " 15 "	20·8
			Other classes	72·5	15 " 20 "	20·1
						20 " 30 "	18·8
						30 " 40 "	17·1
						40 " 50 "	18·8
						50 " 60 "	28·4
						60 years and upwards	75·6

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

16 Darjeeling, " 11 "	9.49	Weather—wet and warm. Prospects of crops very favourable.	
17 Julpigoree, " 11 "	17.42	Weather—alternate rain and sunshine; very heavy rain on the 5th. All reports good. <i>Bhadai</i> paddy and <i>jute</i> are good crops. An outbreak of cholera in north of district, but it has been checked. Cattle-disease prevails in Duars. Some sporadic cases of small-pox reported.	

* For week ending 11th instant.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.— <i>consolid.</i>			
Eastern Districts.			
Dacca Division.	18 Dacca, July 11 '85	3.65	Weather—seasonable. <i>Aus</i> paddy being harvested; <i>amun</i> paddy, jute and sugarcane thriving. Ploughing for <i>roachia</i> paddy going on. Prospects of crops and public health good.
	Manickgunge ...	4.78	
	Manohigunge ...	2.60	
	Narsingunge ...	0.88	Weather—cloudy and showery. Prospects of crops good. General healths good.
	19 Furrusedpore, „ 11 „	1.51	
	Goalundo „ „	2.73	
	Madaripore „ „	0.97	Weather—hot; sufficient rain with occasional high winds. Prospects of crops good. Cholera and fever prevalent in the town and in some of the villages.
	20 Backergunge, „ 9 „	7.97	
	21 Mymensingh, „ 10 „	4.93	
	Jamalpur ...	2.64	Weather—seasonable. State and prospects of crops good. Public health good.
Kishoregunge ...	1.00		
Attia ...	2.76		
Netrokona ...	5.73		
Chittagong Divn.	22 Chittagong, July 14 '85	7.55	Weather—seasonable. <i>Aus</i> paddy being transplanted. Prospects of crops fair. Prices variable. Cholera continues.
	23 Noakhally, „ 10 „	6.10	Weather—cloudy and rainy. State and prospects of crops good. Reaping of <i>aus</i> crop has commenced in the Fenny sub-division. A few deaths from cholera reported from Fenny; otherwise public health good.
	Fenny „ „	4.86	
	24 Tipperah „ 9 „	5.34	Weather—seasonable; intervals of rain and sunshine. Transplanting of paddy being carried on vigorously. Prospects generally good. Public health good.
	Brahmanbareah ...	1.17	
	Chandpore „ „	5.35	Weather—cloudy and rainy throughout the week. Rain has done much good to <i>joom</i> paddy and cotton crop. Ploughing progressing.
	25 Chittagong Hill „ 7 „	4.31	
	Tracts. „ „	2.44	Weather—occasionally rainy; more rain wanted. Prospects of <i>satya</i> paddy, sugarcane and <i>joom</i> crops good. Cholera still prevails in Agortolla. Public health in other parts good.
BEHAR.			
PATNA DIV.	26 Patna, July 11 '85	3.27	Weather—cloudy with east wind. Indian-corn is being sown; sugarcane doing well. Rain will facilitate the preparation of paddy seedlings. Prospects fair. Public health generally good.
	27 Gya, „ 11 „	3.55	
	28 Shahabad, „ 11 „	1.94	Weather—more than three inches of rain fell at the Sudder on the 9th; good rain has also fallen in other parts of the district. Prospects have much improved. All crops on the ground doing well.
	Buxar ...	1.68	
	Sasseram ...	1.01	
	Bhabbhua „ „	0.98	Weather—seasonable. Sugarcane and <i>bhadai</i> sowings doing well, but more rain would be beneficial; it is much wanted in the sub-divisions. Cholera reported from all sub-divisions; it is abating in Bhabhua. Small-pox reported from Sasseram sub-division.
	29 Durbhunwa, „ 11 „	7.33	
	Madhubani „ „	7.93	
	Tajpur „ „	4.09	Weather—greater part of the week cloudy and showery. Several heavy showers of rain during the week. The rivers have overflowed and have caused considerable injury to the <i>bhadai</i> and paddy crops on their banks. There is, however, still time for re-sowing. Transplanting of <i>mureea</i> and paddy seedlings commenced in places. Prices stationary. Cholera still prevailing.
	30 Mozufferpore, „ 11 „	5.43	
	Hajipur „ „	3.11	
	Sitamarhi „ „	10.40	Weather—rainy and cloudy. Rain has been of great benefit. <i>Bhadai</i> sowings almost completed, and transplanting of rice in progress.
	31 Sarun, „ 11 „	2.67	
	Sewan „ „	4.11	
Gopalgunge „ „	4.35	Weather—cloudy and rainy with intervals of fair weather. Rain general throughout the district; it has completely saved the <i>bhadai</i> crop and has greatly benefited indigo, sugarcane and <i>cheena</i> . A few sporadic cases of small-pox, fever and cholera reported; public health otherwise good.	
32 Chumparun „ 11 „	9.97		
BRABHULPORE DIV.	33 Monghyr, July 11 '85	1.45	Weather—showery. Prospects of <i>bhadai</i> crops favourable. More rain required for <i>aghani</i> crops. Prices stationary. Public health on the whole good.
	Beguserai „ „	4.41	
	Jamui „ „	2.29	Transplanting of <i>mureea</i> in the north nearly completed; transplanting of rice going on in Mudehcoorah. Ploughing and sowing going on briskly in the south. Prospects good. Prices stationary. Public health good.
	34 Bhagalpore, „ 11 „	3.21	
	Banka „ „	4.97	
	Soopole „ „	4.50	Weather—wet with light showers. All crops are good at present. Heavy rain wanted for <i>aghani</i> . Health fair.
	Mudehpurah „ „	2.71	
	35 Purneah „ 11 „	1.79	
	Kissengunge „ „	4.97	Weather—seasonable, with showers almost every day. Paddy crops are backward, but thriving, except that in the north (thana Khurba) it is reported that the young plants are being hurt by insects. Price of coarse rice from 12 to 16 seers per rupee. Public health generally good.
	Arrareah „ „	4.04	
	36 Maldah „ 11 „	3.42	
	Chanchal „ „	4.44	Weather—heavy rain daily with short inter-mission. The continued heavy rain is retarding the crops and agricultural operations; a few days of sunshine would be very welcome. There has been too much rain for Indian-corn, and it is feared the crop will be a short one.
	37. Sonthal Pergah „ 11 „	4.30	
	Deoghur „ „	3.75	
Rajmehal „ „	2.08		
Jamtara „ „	6.62		
Lakour „ „	3.1		

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIST.	38 Cuttack, July 10 '85	2.50	Weather—cloudy; slight rain occasionally. <i>Baski</i> being harrowed; <i>serad</i> growing tolerably well, but requires more rain. Crops on the riverside lands greatly damaged by the late flood. Price of rice ranges from 11 to 12 Cuttack seers per rupee in the town. Cholera has made its appearance in the town, and sporadic cases reported from the interior.
	39 Poorwe, " 9 "	1.23	Weather—hot and cloudy with rain on the last day of the week. <i>Sasad</i> cultivation in the low lands has been much damaged, and that in the high lands to some extent by the recent floods. Re-sowing going on in some places where the flood-water has subsided. Rain wanted for the puddling of paddy plants in the parts where the lands have not been flood-d. Common rice is selling at an average of 17 seers per rupee in the Sudder sub-division, and 18 seers 9 chittacks in the Khoorda sub-division. Cholera prevalent in the town, and out in the district, from the influx of pilgrims for the approaching Car festival.
	Khoorda " ...	0.90	
	40 Balasore " 10 "	5.81	Weather—cloudy and rainy. All crops now doing well. Cultivation of rice is being pushed on everywhere favourably. Public health generally good, except that a few sporadic cases of cholera reported from the interior.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh, July 10 '85	4.19	Weather—seasonable. Abundant rain reported from all stations. Paddy and <i>dhadoi</i> sown. No more rain required at present. Cholera reported from Bogodur, Burhi, Chumpanan, Chatra and Hazaribagh. Prices rising.
42	Lohardugga, " 11 "	3.25	Weather—seasonable. Ploughing and sowing going on vigorously. Prices stationary. Public health good.
43	Singbhoom, " 10 "	1.59	Weather—seasonable. Agricultural operations progressing most favourably. Prices easy. Public health good.
44	Manbhoom, " 11 "	4.29	Weather—wet and cool. Agricultural operations going on steadily. Plenty of rain all over the district. <i>Amma</i> is being transplanted. <i>Gora</i> paddy and sugarcane doing well. Prospects improved and prices falling. Cholera still prevalent.

The total fall of rain from 5th to 11th July 1885 ... 2·56
The average fall of the corresponding period for 24 years, S. G.'s Office ... 2·13
The total fall from 1st January to 11th July 1885 ... 24·04
The average fall of the corresponding period for 24 years, S. G.'s Office ... 25·77

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h. 10h. 16h. and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 1 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, d drizzling rain.

ALEXANDER PEDLER.

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF JUNE 1885.

THE month of June is in Bengal, and from a meteorological point of view, the most important month of the whole year, for it is in June that the south-west monsoon establishes itself over the Province, and generally over the greater part of Northern India. Another fact which gives great importance to the meteorology of June is that the distribution of rainfall during this month is found to indicate in a rough and general way the chief features of the distribution of rain which may be expected during the whole of the south-west monsoon season.

The south-west monsoon current, which blows from the Bay of Bengal, is produced by causes which have already been referred to in the reports of previous months. During March, April and May the temperature of the whole of India, and of Northern India in particular, increases with great rapidity and there is thus a steady and increasing difference of temperature between the land and sea area, and at about the end of May, or the commencement of June, this difference attains its maximum. With this difference of temperature, southerly winds blow from the cool sea area towards the heated land. At first these are merely light and local winds; but with the increasing differences of temperature, the southerly moist winds increase in force and in depth till finally a point is reached, when there is a general advance of a large and deep body of moist winds, which may be said to absorb the previous comparatively local winds. It is this general advance of the moisture-laden winds which constitutes the commencement of the south-west monsoon in Bengal. It will be seen, however, that there is no reversal of previous conditions in this case, but rather the strengthening of the previous conditions; and thus in Bengal frequently it is rather difficult to state with accuracy the exact date of the commencement of the monsoon. The sea breeze blowing over Bengal from the Bay of Bengal in March and April is generally light and to a certain extent variable, and there is no doubt that it only extends to a short distance from the land. During the middle or latter end of May, however, a very important change commences, and southerly winds commence to blow in the south of the Bay, giving rise frequently to rain and squally weather. These southerly humid winds advance steadily northwards, giving rise sometimes to the formation of cyclonic storms, but in other cases advancing more quietly. The advance takes place usually along the eastern part of the Bay, and by the end of May monsoon winds are generally blowing over the whole of the southern half of the Bay. After a short interval, another advance of these winds takes place, and by the first week in June these strong and deep southerly winds reach Eastern Bengal, absorbing the lighter local winds in their progress; the monsoon current commences to spread over East and North Bengal, appearing as a south-easterly wind in East Bengal, and as an easterly wind in North Bengal, owing to the deflection caused by the hill systems to the East and North of Bengal. After the first burst it usually extends in a westerly direction, and a few days after the monsoon has commenced in East Bengal, it gives rain to South-West and West Bengal, and a few days later, or when reinforced by another burst of southerly winds, the monsoon extends over Behar and Chutia Nagpur.

It is an important fact that the rainfall in the south-west monsoon is not due to a perfectly steady and continuous action, but that it occurs rather as a series of waves or pulsations, a strong wave of rainfall being followed by a period of comparative calm and absence of rainfall, and it is during the latter that frequently small barometric depressions or cyclonic storms are formed, generally over the sea area, and which, after developing for a few days advance over the land, bringing heavy rainfall to the districts through which they pass. With reference to these storms, it may also be said that the longer the period during which they are forming the more intense they will be. So far also as has been ascertained up to the present time, it would appear that, during a comparatively weak monsoon, the periods of comparative cessation of rainfall are more frequent and are of longer duration than during a monsoon of normal strength, and thus weak monsoons are frequently characterized by the number and comparative intensity of the cyclonic storms or barometric depressions which visit the land, while during years when the monsoon is equal to or above its normal strength, these storms occur but seldom, and they are of little intensity.

In addition to the monsoon current blowing from the Bay of Bengal, there is of course a second monsoon current blowing from the Indian Ocean and Arabian Sea towards Bombay. The formation and character of this branch of the monsoon current were discussed in the monthly report for June 1883, and at certain periods of the monsoon season this branch has an important influence on the rainfall in Bengal, but in normal years, in June, the rainfall is due almost entirely to the Bay of Bengal branch of the monsoon current, so that at this period its influence need not be discussed.

The normal rainfall of June then occurs to a great extent from similar actions to those of April and May, though of course these conditions are much intensified. The rainfall is therefore much heavier than in the preceding two months, and the distribution is to a certain extent similar. The lines of equal rainfall run nearly north and south, the heaviest rainfalls occurring in East and parts of North Bengal, and the smallest in the western parts of Behar. In the former districts rainfall varies from 25 to 35 inches, while in Buxar it is less than 5 inches.

The most important meteorological features of June are therefore the date of the commencement of the south-west monsoon, its strength, the occurrence of cyclonic storms, and the rainfall.

Establishment of the monsoon.—In the report for May, it was noticed that there were indications of monsoon conditions setting in over the south of the Bay from the 18th to the 21st of that month. Strong winds and heavy rain were reported at the Ceylon stations on about these dates, and, so far as can be determined from the logs of vessels navigating the Bay, this was the first, though a rather feeble, burst of the monsoon. This small burst advanced as far north as the Nicobar Islands, and the weather in this locality was unsettled and clearly of a south-west monsoon character for some days. This burst of the monsoon apparently died away, though fresh winds continued to blow in the south of the Bay, but no further actual advance of the monsoon was noticed till the commencement of June, when another advance took place over the centre and south of the Bay. A fall of the barometer then commenced in Bengal on the 5th, which continued steadily up till the 8th, and with the reducing pressure and the rather strong winds blowing in the south and centre of the Bay, the monsoon current commenced to advance on the 7th and 8th over East and North Bengal. A slight pause then occurred in the advance of the monsoon, and it was only on the 11th and 12th that it spread out or extended in a westerly direction, giving good general rain to South-West Bengal and Chutia Nagpur. Another slight delay then occurred, and on the 15th the monsoon spread over North Behar and parts of South Behar, though the latter district did not receive general rain at this time, and in fact not until a day or two later. The monsoon has thus commenced at about the usual period, and the dates on which it may be said to have broken in the various districts may be said roughly to have been—

East Bengal	7th of June.
North Bengal	8th "
South-West Bengal and Chutia Nagpur	11th and 12th of June.
North Behar	15th of June.
South Behar and Orissa	16th and 17th of June.

The monsoon has thus commenced this year about a week later than it did last year.

Strength of the monsoon.—The monsoon current may of course vary in two ways, and its strength will depend on the two considerations of its velocity and the depth or thickness of the current. No means are available for measuring the depth of the current, but the velocity is easily measurable, and in the table below are given the actual hourly velocity of the winds for the month compared with the normal hourly velocity for the same period :—

STATIONS.				Actual wind velocity in June; miles per hour.	Normal wind velocity in June; miles per hour.
Diamond Island	7.9	4.4
Akyab	4.9	4.2
Chittagong	5.7	4.0
Dacca	5.5	3.7
Calcutta	7.3	8.4
Saugor Island	13.1	15.0
Cuttack	8.6	3.7
False Point	11.9	13.3

These are eight typical stations near or on the sea coast, and they should therefore give a good measurement of the velocity with which the monsoon current has been blowing. The general result of these numbers is to show that, while the average wind velocity at the eight stations has actually been 7.4 inches, the normal velocity is 7.1 inches. Practically, then, a monsoon of normal strength has probably been blowing. When, however, the individual stations are considered, it will be seen that, while in every case at the eastern stations the wind velocities have been above the normal, at the western stations in all cases velocities have been below the normal, or in other words, there is thus very strong evidence to show that the monsoon current is at present being deflected towards Eastern Bengal rather more than is usually the case.

Barometric depressions for the month.—Only two very small and feeble depressions were formed during the month. The first commenced to form either quite close to the head of the Bay or over the Sunderbuns, and on the 17th its centre was over the Sunderbuns not very far to the west of Chittagong. The storm first advanced in a north-westerly direction passing to the north of Calcutta, and on the 19th its centre was north of Midnapore. It then moved in a south-westerly direction, and on the following day it was to the west of Orissa, probably near Sumbulpore. On the 21st it again began to move in a northerly direction, passing through the western part of Chutia Nagpur and reaching the North-West Provinces, where it filled up and disappeared near Allahabad. The movement of this storm was very unusual, as such storms rarely curve in a southerly direction, and still more rarely partially retrace the previous path. The second storm commenced to form on the 25th instant a little

further south than the previous one. It advanced in a westerly direction, and on the 26th it was to the south of Saugor Island. It crossed the coast in the neighbourhood of Balasore on the same evening, and then travelled in a north-westerly direction through Chutia Nagpur. Both of these storms were comparatively feeble, but they of course brought up good general rain to the districts through which they passed, and it will be seen that Chutia Nagpur was benefitted by the rainfall due to the advance of both these storms.

Pressure was, as noted in the previous month's report, very largely above the normal, and the average excess over the whole Province in May was equal to 0.077". The barometric changes which occurred in the earlier parts of the month were to increase this large excess, and the average excess for the first week in June was no less than 0.12". In the second week the excess pressure began to disappear, and it fell to 0.05". In the third week it had quite disappeared, and an average defect of 0.036" was registered, while in the fourth and last week the defect was still further intensified, and it equalled 0.086" over the whole Province. The average pressure for the whole month has therefore not been very far removed from the normal, and the extreme variations are an excess pressure of 0.03" at Durbhanga, and a defect of 0.02" at Gya. The average variation over the whole Province has been a defect of less than three thousandths of an inch, so that this pressure may be considered normal.

Temperature.—The temperature during the month, as is usual during June, has varied very considerably, and during the first week or ten days, or until the commencement of the monsoon rains, temperature was of course very high, but with the setting in of the rains temperature fell rapidly over the greater part of the Province. As the rains commenced at about the normal period, the average temperature for the Province is not far removed from the normal, and it is only about half a degree in excess. The extreme variations are an excess of 2° at Durbhanga, and a defect of 1.5° at Gya.

Rainfall.—The distribution of rainfall during the month of June is generally very irregular, and this year has been no exception to the rule. As has been before stated, the rainfall in this month increases in quantity from the west towards the east of the Province. This has of course been the general distribution of rainfall for this month also, but it has been subject to very conspicuous exceptions. Centres of comparatively heavy and light rainfall have been rather numerous, and the lines representing equal falls of rain instead of being of the usual simple curved shape are very contorted. Further, it will be remembered that two barometric depressions or cyclonic storms have passed over Chutia Nagpur, and have brought heavy rainfall to that district.

Taking, however, the whole of the Province of Bengal into consideration, the rainfall has been about equal to the normal, and the average rainfall of the Province, obtained by taking the averages for each meteorological division, when compared with the normal average, shows that 95 per cent. of the normal rainfall has been received. Speaking generally, the only district which has received a fall largely in excess is Chutia Nagpur, and the fall has there been equal to 157 per cent. of the normal. On the other hand, three districts have received very defective falls, and these are Orissa and North and South Behar. Orissa has received 63 per cent. of the normal fall, South Behar 59 per cent., and North Behar only 56 per cent. South-West Bengal, East Bengal, and North Bengal have received about normal falls, and the amounts only vary from normal up to about 10 per cent. in excess.

The actual distribution of the rainfall has, however, been so irregular that it is impossible to do more than give the most general description of it. Thus it may be said that to the east of a line running from the Darjeeling district through the Rungpore, Mymensingh, Furreedpore, and Backergunge districts the rainfall has varied from 15 inches up to in some cases (in the Cooch Behar district) 45 inches; and to the east of a line passing through the Dinagepore, Rajshahye, Nuddea districts, Calcutta and Saugor Island the rainfall has been 10 inches and upwards. Chutia Nagpur has also received a fall generally exceeding 10 inches, while Orissa and North Behar have received a fall which has averaged about 5 inches. The greater part of South Behar has received a fall of less than 4 inches, while such stations as Barh, Behar (Patna district), Begoeserai (Monghyr district), Buxar, and Gopalgunge (Sarun district) have received even less than 2 inches of rain.

Compared with the normal fall, the eastern and northern districts in many cases show a large excess, and in certain stations in North Bengal there has been an excess of from 10 to 15 inches. The southern parts of South-West Bengal, including parts of Bankoora, also show distinct excess rainfall varying in some cases up to as much as nearly 10 inches in excess at Satkira, while the whole of Chutia Nagpur is decidedly in excess, the average excess being from 4 to 5 inches. Assuming that, when the difference between the actual rainfall and the average rainfall is less than 10 per cent. of the average (either in excess or in defect), the rainfall may be considered normal, then the rainfall for June was normal in the following districts:—Midnapore, 24-Pergunnahs, Howrah, Burdwan, Bankoora, Nuddea, Jessore, Chittagong, Noakhally, Mymensingh, Bogra, Julpigoree, and Maubhoom.

The following are the districts in which the average rainfall was more than 10 per cent., and less than 20 per cent. in excess:—Khoolna and Pubna; and in the following districts the fall was more than 20 per cent. in excess:—Furreedpore, Dacca, Comilla, Rungpore, Cooch Behar, Hazaribagh, Lohardugga and Singhbhum.

In the same way the following are the districts in which the average rainfall was more than 10 per cent. and less than 20 per cent. in defect:—Hooghly, Beerbhoom, Backergunge, Rajshahye and North Bhagulpore.

In the following districts the rainfall varied from 20 to 40 per cent. in defect :—Balasore, Moorshedabai, Maldah, Dinagepore, Shahabad, Gya, South Bhagulpore and Sonthal Pergunnahs.

In the districts of Cuttack, Purneah, Durbhanga, Mozufferpore, Chumparun, Sarun, and Monghyr, the fall was from 40 to 60 per cent. in defect; and lastly, in Pooree and Patna the defect was more than 60 per cent. of the normal.

The south-west monsoon, as will be seen above, has broken with considerable vigour in the eastern and northern districts of the Province, and with less vigour in Behar and Orissa. Some extraordinarily heavy rainfalls have been reported during the month from East and North Bengal, as the following instances will show. The first burst of the monsoon reached East and North Bengal on the 7th and 8th instant, and on the 7th, Dinhatta in the Cooch Behar district, reported 7·31 inches of rain and Cooch Behar 7·05 inches of rain; again on the 9th Cooch Behar reported 5·82 inches, and on the 10th 6·50 inches. On the 11th Mymensingh received 8·29 inches, and on the 13th 5·04 inches. On the 11th also Bagdogra (Rungpore district) received 6·86 inches. These amounts were, however, surpassed by Dinhatta, which on the 16th reported the excessive amount of 12·05 inches, and lastly on the 21st, Cox's Bazar received 6·84 inches and Chittagong 5·15 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven Meteorological Divisions of the Province for the month of June 1885 :—

METEOROLOGICAL DIVISIONS.				TEMPERATURE.					RAINFALL.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 14th July 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 10TH OF JULY 1885.

At the close of the previous week a good steady monsoon current was blowing from the Bay of Bengal over the whole Province, and was giving rise to good general rainfall in all districts. There were, however, indications that a westerly current was setting in over the western divisions, and it was therefore seen that the Bombay branch of the monsoon was beginning to make itself felt. The Bombay branch of the monsoon steadily advanced in a westerly direction during the following four or five days, and its influence was felt even in some of the eastern districts of the Province. On the 9th and 10th the Bay of Bengal monsoon winds began to strengthen, and to drive back the westerly winds which predominated fully as far as the centre of the Province, and on the last day of the week the influence of the westerly current had almost entirely ceased. It will thus be seen that almost throughout the week southerly, south-easterly, and easterly winds have been blowing in the eastern and northern districts, while southerly, westerly, and in some cases north-westerly winds have been blowing in the western and south-western districts. It will of course be noticed that these winds are to a great extent of opposite direction, and the effect of the interaction of these opposing wind currents is to produce ascensional air motion which is followed by expansion and reduction of temperature, and consequent production of rainfall. The conditions during the entire week have therefore been extremely favourable for the production of rain, and consequently in all districts and almost throughout the week rain has been falling and in most cases the amounts have been fairly large.

Pressure was during the previous week almost equal to the normal, it was increasing generally on the first day of the present week, and this was followed by a fall for about two days. After this there was a gradual but steady increase of pressure which lasted till the close of the week; so that the average pressure for the whole week has been in most districts very distinctly above the normal. The actual average variations from the normal for the week have been an excess of 0.04" in Orissa, and a defect of about 0.01" in Behar, but the average variation for the whole Province has been an excess of 0.012".

Temperature has been low in almost all districts and at almost all stations throughout the week. This has of course to a great extent been due to the continued and abundant rainfall which has been received in most districts. At all stations except Hazaribagh the average temperature for the week has been below the normal. In Behar the defect from the normal has averaged about 2°, while in East and South-West Bengal and Orissa the defect has been about 1.5°. In Chutia Nagpur an excess temperature of about half a degree has been registered.

Winds were, as stated above, of the usual southerly, south-easterly and easterly character at the commencement of the week, but this was shortly followed by the setting in of the westerly Bombay current, which advanced as far as Central Bengal by the middle of the week, but which was again driven back by the Bay of Bengal monsoon current at the close of the week. Owing to the interaction of the opposing wind currents, wind velocities have been decidedly low throughout the week, but with the advance of the Bengal current, wind velocities commenced to increase rather rapidly, particularly at the southern and south-western stations.

Rainfall has been more general and more continuous during the present week than in any previous week since the commencement of the monsoon. In fact the rainfall has been so general and frequent in occurrence that about one-half of the registering stations in the Province have received rain on every day of the week. The extreme frequency of the rain showers may be judged by stating that the average number of rainy days at all stations in the Province for the week has been 5.4 or taking up the meteorological districts, Orissa reports an average of five rainy days, South-West Bengal reports on the average 5.6 rainy days, and in East Bengal there have been six rainy days. In North Bengal the rainy days in the week have averaged 6.1, in North Behar 5.7 days, in South Behar 5.2 days, and in Chutia Nagpur there have been only 4.8 rainy days. The rainfalls for the week have also been very heavy, thus Orissa has received 2.77 inches of rain against the normal fall of 2.36 inches, which is equal to 17 per cent. in excess. South-West Bengal has received 4.36 inches against the normal 2.35 inches or 86 per cent. in excess. East Bengal has received an average fall of 5.10 inches against the normal 3.34 inches or 58 per cent. in excess. North Bengal has received no less than 6.24 inches as against the usual fall of 3.72 inches, which is 68 per cent. in excess of the normal. North Behar has received 4.48 inches against the normal fall of 3.3 inches equal to 36 per cent. in excess. South Behar has received 2.70 inches, while the normal fall is 2.47 inches, so it has received 13 per cent. in excess; while Chutia Nagpur has received 4.18 inches against the normal fall of 2.70 inches which is equal to 55 per cent. in excess of the normal.

In some districts the falls have been exceptionally heavy for the week; thus, taking some of the South-West Bengal districts, the Midnapore district has received an average of about 5.6 inches against a normal fall of 2.4 inches, while at Midnapore itself no less than 11.73 inches were registered. The district of Burdwan has received an average of 6.7 inches against the normal fall of 2.05 inches, while Culna and Ranigunge both registered more than 8 inches of rain. The stations of Bankoora, Maliara, Indas and Kotulpore in the Bankoora district have also all registered more than 8 inches of rain during the week. Or taking up some of the North Bengal districts, the district of Julpigoree has received 12.5 inches

against an average of 4.75 inches, while Julpigoree itself reports 17.4 inches for the week, and on one day alone (the 6th) it received 9.61 inches; Buxa also reported 10.4 inches on the same day; the district of Rungpore has received 6.5 inches against the normal 5.5 inches, while Bagdogra has received more than 9 inches. Again in North Behar the Durbhunga district averages 6.5 inches against the normal fall of 4.24 inches, and Behar has received 8.2 inches, and lastly the Chummarun district has received 7.2 inches against the normal 4.79 inches, while Motihari and Bagala have reported between 9 and 10 inches of rain. Taking, then, the whole Province into consideration, it may be said that rainfall has been copious and continuous in almost all districts.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 10th of July 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month		Since 1st. May 1885.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

METEOROLOGICAL OFFICE, BENGAL;
The 14th July 1885.

ALEXANDER PREDIER,
Offg. Meteorological Reporter to the Govt. of Bengal.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 5th to 11th July 1885.

MONTH	Date.	TEMPERATURE.				Mean wet bulb.	HYGROMETRY.			Rain.
		Mean.	Maximum.	Range.	Minimum.		Vapour tension.	Dew point.	Humidity.	
1885.		°	°	°	°	°	Inches.	°	%	Inches.
July	5th	81.4	90.2	13.4	76.8	78.9	.956	77.8	89	0.10
"	6th	82.6	92.0	14.7	77.8	79.9	.969	78.9	88	0.75
"	7th	81.8	91.5	14.5	77.0	79.4	.973	78.4	89	0.31
"	8th	82.5	90.0	10.8	79.2	80.1	.996	79.8	89	0.30
"	9th	80.7	89.6	13.3	76.8	78.7	.966	77.8	91	1.76
"	10th	82.5	90.0	12.2	77.8	79.8	.959	78.0	86	0.15
"	11th	83.4	91.0	11.7	79.3	80.1	.984	78.7	86	0.05

The mean temperature of the seven days 82.1
The extreme variation of temperature 15.7
The maximum temperature 92.0
The mean relative humidity 88
The total fall of rain from 5th to 11th July 1885 3.42

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

**VITAL STATISTICS OF THE PRINCIPAL MUNICIPALITIES IN BENGAL
FOR THE WEEK ENDING 27th JUNE 1885.**

DURING the week above mentioned, the birth and death-rates of the principal Municipalities, stood at 21.0 and 28.8 per 1,000 of population, respectively, as opposed to 20.2 and 33.1 per 1,000 during the preceding week ending 20th June, exhibiting a small improvement in the record of births, and a large decline in that of deaths.

2. The following towns returned the highest proportions of births and deaths :—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Burdwan	45.8	Durbhanga	89.7
Gya	38.2	Chittagong	63.9
Bhagulpore	38.0	Poori	39.9
Beauleah	36.8	Mozufferpore	37.7
				Gya	36.9
				Bhagulpore	36.2
				Patna	35.4
				Burdwan	29.0
				Suburbs of Calcutta	28.1

3. Referring to the principal death-causes, cholera is stated to have caused the deaths of 6.3 per 1,000 of the population of the Municipalities under notice against 8.2 per 1,000 in the preceding week ; small-pox .3 against .8 per 1,000 ; fever 9.6 against 11.6 per 1,000 ; bowel-complaints 4.1 against very nearly the same proportion, viz. 4.2 per 1,000 ; injury .4 against .9 per 1,000 ; and " other causes " 8.1 against 7.4 per 1,000, indicating a decline in mortality from all diseases (principally from cholera and fever), excepting the diseases recorded under the head of " Other causes," which proved slightly more fatal.

4. Of the above-mentioned diseases, while bowel-complaints proved noticeably fatal only in the Bhagulpore town at the rate of 13.6 per 1,000 of population, and small-pox, fever, and injury exhibited normal severity, cholera and the diseases recorded under the head of " Other causes " caused the highest mortality in the following Municipalities :—

<i>Cholera.</i>				<i>Other causes.</i>			
			Ratio per mille.				Ratio per mille.
Durbhanga	56.6	Poori	27.3
Chittagong	25.8	Gya	13.7
Mozufferpore	9.7	Durbhanga	13.4
Burdwan	9.1	Midnapore	12.4
Suburbs of Calcutta	6.8	Patna	11.3
Midnapore	6.2	Bhagulpore	10.9
Dacca	4.6				
Howrah	2.9				
Gya	2.7				

It will be observed from the above figures, that while cholera still prevails with much severity in Durbhanga, the fatal results from it had abated considerably in comparison with its incidence during the preceding week ; and that it prevailed in Chittagong in very severe form.

5. The death-rates in relation to *Sex*, *Class* and *Age* stand as indicated below :—

<i>According to Sex.</i>			<i>According to Class.</i>			<i>According to Age.</i>		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	29.1	Christians	...	17.4	Under 1 year	...	223.1

sex of the Europeans in the Darjiling Municipality was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Acc," the ratios under which have been revised. The ratios under which have been revised are not employed as a basis of calculation owing to the results of the census under this head not having been revised.

ALLEN MEARS.

JAMALPUR, the 9th July 1885.

Dy. Traffic Manager.

General Remarks on the fluctuation of principal staples carried over the East Indian Railway during the month ended 30th May 1885.

INCREASES.

Wheat.—Owing to firmer advices from the home markets there were large transactions in the purchase of wheat for delivery in May, which led to this increase.

Seeds.—Good prices in the Calcutta and Bombay markets, and a fair demand for export, account for the increase in these staples.

Coal and coke.—The increase in upwards coal is attributable to heavy demand from foreign railways, and the small increase in downwards traffic is assignable to larger despatches to Calcutta for use of river steamers and for local consumption.

Railway Material, Foreign.—This increase is accounted for by the construction of the Bolan State Railway.

Sugar.—The increase in this staple is due to a better demand in the mofussil markets.

Stone.—Large despatches of stone were made from the principal quarries to Allanabad, Patna Ghat, and Howrah for public buildings resulting in this increase.

Gunny.—The increase in this commodity is accounted for by the improved traffic in wheat and seeds.

Opium.—This is attributable to more opium having been manufactured than in the corresponding period of 1884.

Tobacco.—Brisk markets in the Upper Provinces led to an increase under this head.

Government Stores.—Larger despatches than in May 1884 account for the increase.

Cotton.—The small increase noted against this staple may be attributed to ordinary fluctuation of trade.

Saltpetre.—The price of this article having improved is the reason of this increase.

DECREASES.

Piece-goods.—Tightness of money, several failures in the bazar, and political uncertainty, have all contributed to cause a decrease in the import of piece-goods.

Rice (husked and unhusked).—The falling off in this traffic is due to poor crops last season owing to scanty rainfall in Bengal.

Salt.—The heavy despatches made in March last to the Patna and Behar districts may be assigned as the reason for this decrease.

Iron.—This small decrease may be attributed to ordinary fluctuation of trade.

ALLEN MEARS, Deputy Traffic Manager.

TRAFFIC MANAGER'S OFFICE, JAMALPUR, 9th July 1885.

DISTRICT ROAD FUND.

PUBLIC WORKS DEPARTMENT—ROAD CESS.

Calcutta, the 13th July 1885.

No. 2370R.C.

READ—

Letter from the Accountant-General, Bengal, No. 160L.F., dated the 7th July 1885, submitting an abstract of receipts and expenditure of the several District Road Committees in Bengal, for the quarter ending the 31st March 1885.

RESOLUTION.

THE Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the second quarter of the cess year 1884-45, be published in the *Calcutta Gazette*, and be circulated to the officers concerned.

ORDER—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

ORDERED also that a copy of this Resolution, and of the abstract referred to, be forwarded to all Commissioners of Divisions; to all Superintending Engineers of Public Works Circles in Bengal; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

G. F. E. S. NEILL, Major, M.S.C.,

Under-Secy to the Govt. of Bengal,

P. W. Dept.

E. T. ATKINSON,

Accountant-General, Bengal.

THE following Report on the working of the Licensed Warehouse and Fire-Brigade Act during 1884-85 in Calcutta is published for general information.

J. WARE EDGAR,
Offg. Secretary to the Govt. Bengal.

No. 16, dated Calcutta, the 29th June 1885.

From—H. L. HARRISON, Esq., c.s., Chairman of the Corporation of the Town of Calcutta,

To—The Secretary to the Government of Bengal, Municipal Department.

I HAVE the honour to submit the following report under section 30 of Act IV (B. C.) of 1883 of the Jute Screw and Warehouses in the Town of Calcutta for the year ended 31st March 1885.

2. At the close of last year there were 76 sanctioned warehouses on the register within the limits of the town. Three new licenses for Nos. 67-9 Strand Road, 178 to 178-4 Upper Chitpore Road, and 2 to 2-2 Ram Kanto Bose's Street and No. 5 Ahireetollah Street were sanctioned during the year. These make up the total number of warehouses to be 79. Of these 6 were cancelled during the year for default of payment of license fees and one, viz. No. 76-2 Durmahatta Street, has been amalgamated with Nos. 80 and 80-1, thus reducing the number at the end of the year to 72, of which a complete list, arranged according to the Acts under which they were originally licensed, is appended to this report.

3. Ten applications were received during the year, 7 for licensing existing godowns for storage of jute, 2 for permission to construct new jute warehouses and 1 to rebuild an existing godown. Of these 10 applications 5 have been sanctioned, 2 were rejected for want of sufficient cart space, one has been withdrawn and 2 are under consideration.

4. The license fees realized during the year under notice from these 72 warehouses amounted to Rs. 23,275, or Rs. 141-10-8 more than last year.

5. There were two cases of fire during the year—one at No. 1 Ahireetollah Street and the other at No. 43 Nimtollah Ghat Street. The loss sustained by the owner in the former case amounted to about Rs. 1,000, and that in the latter to about Rs. 14,000. There was no case of infringement of the Jute Act on the part of the licensees.

6. The subjoined statement will show the receipts and expenditure of the Jute Warehouse Fund during the year under review.

Complete list of the Jute Warehouses licensed in the Town of Calcutta for the year 1884-85.

No.	Name of street and number of premises.	Name of Licenseholder.	Annual assessment.	Annual license fee.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 18th July 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, July 18 '85	2.72	Weather—very warm. Prospects of crops good. Price of rice 12 to 14½ seers per rupee. Public health good except in the Sudder sub-division.
	Culna ...	2.86	
	Cutwa ...	3.89	
	Raneegunge ...	6.21	Weather—hot and sometimes cloudy with occasional showers. Transplanting of <i>amun</i> going on briskly all over the district, and that of <i>aus</i> nearly completed. Price of rice stationary. Health fair.
	2 Bankoora, " 18 "	0.64	
	Bishenpur ...	1.07	Weather—cloudy and warm. A few showers. Transplanting of paddy making progress. Prospects of crops still continue satisfactory in most places. Prices unchanged. Cholera still prevalent in the Sudder sub-division.
	3 Beerbhoom, " 18 "	1.14	
	Rampore Hat ...	1.41	Weather—seasonable. Cultivation of land and transplanting of paddy going on actively everywhere. Public health generally good.
	4 Midnapore, " 18 "	1.61	
	5 Hooghly, " 18 "	1.53	Weather—seasonable. Prospects good on the whole. Floods in the Damoodar have damaged some of the <i>aus</i> crop in the Jehanabad sub-division. Prices show a tendency to rise. Public health good. Severe earthquake on the morning of the 14th.
	Serampore ...	1.54	
	Jehanabad ...	2.73	Weather—seasonable and cool. All crops doing well. Transplanting of <i>amun</i> rice has commenced. Public health fairly good.
	Howrah, " 18 "	0.77	
	Oolooberiah ...	0.97	
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, July 18 '85	Weather—hot with light showers. Early rice and jute doing well. Transplanting of <i>amun</i> going on in low lands. Public health generally good.
	7 Nuddes, " 18 "	0.75	Weather—very sultry. Earthquake on the 14th; a severe shock at about 6.2 A.M. followed by a slight shock at about 10.40 A.M. Prospects of crops appear to be good. Good progress has been made in tillage and planting.
	Kooahtea ...	0.98	
	Meherpur ...	2.74	
	Choonananga ...	1.97	
	Kanaahat ...	0.60	Weather—occasionally rainy and cloudy. Transplanting of <i>amun</i> going on. <i>Aus</i> doing well. Public health fair.
	8 Khoolua, " 18 "	1.67	
	9 Jessore, " 18 "	2.98	Weather—seasonable. <i>Aus</i> paddy being harvested in the Magoora and Narail sub-divisions. Transplanting of <i>amun</i> paddy going on. Prospects good. Health improved.
	Jhenida ...	1.27	
	Magoora ...	1.70	
	Narail ...	1.27	
	Bongong ...	0.75	Weather—seasonable, but rain is slight. A shock of earthquake at 6.24 A.M. on the 14th instant caused considerable damage to pucca buildings. Prospects of <i>aus</i> crop good, but more rain urgently wanted for the transplanting of <i>amun</i> rice. Public health good.
	10 Moorshedabad, " 18 "	0.93	
	Lalbag ...	1.08	
	Kandi ...	0.40	
RANGPORE DIV.	Junipore ...	0.93	Plenty of rain everywhere with alternate sunshine. Jute beginning to be harvested. Other crops progressing. General health good. Average price of rice 13 seers per rupee.
	11 Dinagepore, July 17 '85	6.71	
	12 Rajshahye, " 18 "	4.54	
	Natore ...	5.85	
	Nowgong ...	4.28	Weather—cloudy and showery. Prospects of <i>aus</i> paddy and other crops fair. Preparation of land for <i>amun</i> paddy going on smoothly. Price of rice almost stationary. A little cholera reported from Tanore.
	13 Rangpore, " 18 "	5.43	
	Nilphamari ...	7.44	Weather—hot and cloudy with occasional showers. Harvesting of <i>aus</i> paddy, <i>kaon</i> , and jute going on. Transplanting of <i>amun</i> continues. Prospects of crops good. Fevers and bowel-complaints on the increase, and cholera limited to thana Jaldhaka. Severe earthquakes felt on the morning of the 14th instant.
	Kurigram ...	6.20	
	Gaibanda ...	4.20	Weather—seasonable, but more rain required. At 8.20 A.M. on the 14th an earthquake occurred, and a series of shocks and tremors have been going on ever since, the last having taken place a few minutes before 5 P.M. on the 18th. Prospects of <i>aus</i> very good. Jute thriving. Sowing of <i>amun</i> going on. Public health fair.
	14 Bogra, " 18 "	3.01	
	15 Pubna, " 18 "	0.70	Weather—rainy and hot. The earthquake of the 14th was severely felt at the Sudder station and at Serajgunge. Crops very flourishing.
	Serajgunge ...	0.84	
	16 Darjeeling, " 18 "	5.67	Weather—wet and warm. State and prospects of crops favourable. Good and seasonable rain with intervals of sunshine. Condition of all crops good. Weather very favourable for cultivators. A little cholera here and there, and a few cases of small-pox. Cattle-disease very bad in places.
	17 Julpigoree, " 18 "	4.52	

	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—continued <i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, July 18 '85	1.63	Weather—seasonable. Harvesting of early rice and jute going on. Damage to crops in low lands in Keranigunge station is apprehended owing to sudden rise of water. Sugarcane and paddy thriving. Prospects of crops and public health good.
	Manickgunge ...	3.32	
	Munshigunge ...	0.99	
	Naraingunge ...	2.2	
	19 Furruckpore, " 18 "	0.82	Weather—seasonable. A severe shock of earthquake at about 6.20 A.M. on 14th. The water has in places risen too rapidly, but on the whole the crops are good. Public health good.
	Goalundo ...	1.67	
	Madaripore ...	1.92	
	20 Backergunge,	Return not received.
	21 Mymensingh, " 17 "	2.13	Rain general. A severe shock of earthquake at 6.25 A.M. on the 14th instant extended all over the district and caused extensive damage to masonry buildings, injury to many persons, and some loss of life. Several other slight shocks followed at intervals during the day. Prospects of crops excellent.
	Jamalpur ...	5.89	
	Kishoregunge ...	1.22	
	Attia ...	1.27	
	Netrokona ...	2.40	
CHITTAGONG DIV.	22 Chittagong, July 21 '85	2.80	Weather—hot with occasional showers of rain. <i>Amra</i> paddy being sown. Prospects generally fair. Prices variable. Cholera lingers. Return not received.
	23 Nonkholly,	
	24 Tipperah " 16 "	1.37	Weather—cool and breezy with bright sunshine and occasional showers. Prospects of crops all that could be wished. Early rice ripening, and will be a splendid crop except in places affected by the late floods there. Transplanting of late rice proceeding vigorously. Jute looks promising. Fever very prevalent.
	Brahmanbareah ...	1.62	
	Chandpore ...	1.0	
	25 Chittagong Hill Tracts, " 14 "	2.00	Weather—cloudy and rainy with occasional sunshine throughout the week. <i>Joom</i> paddy, cotton, and other crops doing well. Ploughing still continues for late rice crop.
BEHAR	Hill Tipperah, " 15 "	0.77	Weather—hot. More rain wanted. Prospects of <i>satya</i> paddy and sugarcane continue to be good; <i>jooms</i> are looking fair. Cholera in Agartolla not yet ceased, otherwise public health good.
	26 Patna, July 18 '85	2.50	Weather—cloudy and hot. Sowing of <i>bhadoi</i> and paddy continues; maize and <i>kaoni</i> have germinated well. Public health good.
	27 Gya, " 18 "	2.42	
	28 Shahabad, " 18 "	1.20	Showers daily, except on the 17th. At 6 A.M. on the 14th a shock of earthquake was felt, but it was not severe enough to cause damage to any buildings. Nothing new to report regarding the state and prospects of the crops, which continue to be good. Slight variations in prices; highest at Nowada. Cholera still prevalent in some places.
	Buxar ...	1.06	
	Sasseram ...	2.38	
	29 Durbhanga, " 18 "	3.15	Weather—cloudy. Rainfall of the week has facilitated agricultural operations which are progressing satisfactorily. Indian-corn still being sown, and paddy seedlings germinating well. More rain wanted in Buxar and Sasseram. Cholera reported from Buxar.
	Tajpur ...	0.83	Weather—very hot and occasionally cloudy. <i>Bhadoi</i> crops on high lands coming on well. Transplanting of paddy and <i>murwa</i> seedlings in progress. Prices stationary. A few isolated cases of cholera still reported.
	Madhubani ...	2.38	
	30 Mozufferpore, " 18 "	5.14	Weather—very favourable for the growth of the crops, being hot with alternate cloudy sky and sunshine. Sowings pretty well completed, and transplanting in progress. Some injury by floods reported from the north. Prospects of crops on the whole promising. A good deal of cholera in the district.
	Hajipur ...	0.54	
	Sitamarhi ...	5.36	
	31 Sarun, " 18 "	1.05	Weather—rainy in the beginning, fair towards the end of the week. Rain general throughout the district to the great benefit of all crops. Weeding operations in full progress. <i>Bhadoi</i> crops looking well. Manufacture of indigo (first cuttings) has begun. Outbreaks of cholera, more or less severe, in several thanas; otherwise public health good.
	Sewan ...	5.85	
	Gopalgunge ...	4.44	
	32 Chumparun, " 18 "	2.45	Weather—cloudy and close. Sunshine now required, as the <i>makai</i> and other crops are beginning to sicken. Small local floods reported from several tracts, causing, however, no serious damage. A few cases of cholera reported.
BRASSAVALONS DIV.	33 Monghyr, July 18 '85	1.31	Weather—hot and muggy. Prospects of crops continue good; more rain required for the <i>aghani</i> . Prices steady. Public health fair.
	Beguserai ...	0.94	
	Jamui ...	4.32	
	34 Bhagalpore, " 18 "	3.32	Sowings still continue; rice seedlings are being transplanted. Fine weather is now required especially for the Indian-corn crop. Prices generally stationary; in north price of rice has fallen slightly. Public health good.
	Banka ...	0.52	
	Mudhepurah ...	2.48	
	Scoopole ...	1.80	
	35 Purneah, " 18 "	1.18	Weather—showery. Prospects of <i>bhadoi</i> good; transplanting of <i>aghani</i> progressing. Health fair.
	Kimsengunge ...	4.51	
	Arrareah ...	3.32	
	36 Maldah, " 18 "	3.80	Weather—seasonable, with intervals of rain and sunshine. The fast rising of the Ganges has to some extent damaged the <i>bhadoi</i> paddy in the west of the district (Kaliachak and Manikchak). Prospects of crops in other parts are favourable. Coarse rice is selling at from 12 seers 10 chittacks to 16½ seers per rupee. Cholera has re-appeared rather badly at Shahpur, opposite English-bazar.
	Chanchal ...	4.14	
	4.15	
	37 Sonthal Perghe, " 18 "	0.88	Weather—unsteady, wind variable, occasional heavy showers with alternate sunshine. The break in the weather is doing a great deal of good. Weeding going on of Indian-corn which is backward. Rice prospects good; other crops doing well. Cholera prevalent here and there. A severe shock of earthquake on the 14th.
	Deoghur ...	2.57	
	Goida ...	0.56	
	Kajmehal ...	6.09	
	Jamtara ...	2.49	
	Pakour ...	0.67	

	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA:			
ORISSA DIV.	38 Cuttack, July 17 '85	3.04	Weather—cloudy with light rain. <i>Beali</i> and <i>sarad</i> crops doing well. <i>Beali</i> being harrowed. Inundated lands are being re-sown. Common rice is selling at 12 Cuttack seers per rupee in the town. Public health generally good, with the exception of sporadic cases of cholera in places.
	39 Pooree, " 16 "	1.43	Weather—hot and cloudy. Rivers have gone down. <i>Sarad</i> re-sowing going on in the inundated lands. Puddling has commenced in some places, <i>Beali</i> (early rice) thriving. Common rice is selling at an average of 19 seers 4 chittacks per rupee in the Sudder sub-division, and 19 seers 14 chittacks in Khoorda. Cholera is still prevalent owing to the influx of pilgrims.
	Khoorda " ...	3.86	
	40 Balasore " 17 "	0.71	Weather—hot and cloudy. Prospects of crops good. Weeding and puddling operations commenced at places. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	41 Hazaribagh, July 17 '85	3.18	Weather—clear and seasonable. There has been a break in the rains which was much wanted. Rain too much for the <i>bhadai</i> . Paddy looking well everywhere. Cholera reported from Tandwa and Hazaribagh stations.
	42 Lohardugga, " 18 "	0.48	Weather—seasonable. Agricultural prospects excellent. Sowings still continue. Cholera reported from a few places; otherwise public health good. A slight shock of earthquake on the morning of the 14th.
	43 Singbhoom, " 17 "	0.33	Plentiful rain reported from the interior, though very little fell at head-quarters. All crops very favourably reported on. Prices easy. A few cases of cholera reported from thana Chuckerdhurpore.
	44 Manbhoom, " 18 "	0.59	Weather—hot and still. A slight shock of earthquake at 6.30 A.M. on the 14th instant. There was not sufficient rain at head-quarters during the week, but copious rain fell in the interior of the district. Agricultural operations going on steadily. Transplanting has commenced. <i>Bhadai</i> crops doing well. Coarse rice sold at 15 seers per rupee on the 18th in the Purulia market. Cholera has abated a great deal in the parts in which it was prevalent.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 20th July 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 17TH OF JULY 1885.

At the close of the previous week a fairly steady monsoon current was blowing from the Bay of Bengal over the whole Province, and on the Saturday these conditions continued, though at the southerly and westerly stations there was rather a stronger westerly element than usual. Wind velocities showed that the monsoon current was a fairly strong one, and it brought light to moderate rain to all the districts of the Province, except to Orissa and some of the south-western stations of South-West Bengal, where the westerly current kept back the rain-bearing winds. The Bay of Bengal current, however, appeared to be gradually strengthening, and on the following day the westerly winds were being steadily driven back, and except at one or two stations had almost disappeared. Another small advance of the westerly winds again took place on the Monday, but only to be again driven back by the easterly and south-easterly winds on the Tuesday. On this day too a rather rapid fall of the barometer commenced at the coast stations at the head of the Bay, and this, taken in connection with the fact that winds began to indicate a slight tendency to cyclonic circulation in the north-west angle of the Bay, showed that a small barometric depression had formed. It was, however, only a very small and feeble one, and it was formed apparently close to the Orissa coast, and by the following day it had crossed the coast and was in Orissa, the lowest barometric pressure on the morning of Wednesday, the 15th, being reported from Outtack. On the Thursday, so far as the reported wind directions showed, the small depression had advanced in a north-westerly direction, and it was probably to the west of Orissa or in the west of Chutia Nagpur. The storm was an exceedingly shallow one, and it gave only light showers to the districts through which it passed. On Friday, the last day of the week under review, a second exceedingly feeble barometric depression formed itself; but this time it was formed over the Sunderbuns, and its centre was some little distance to the south-east of Calcutta. This very feeble storm moved during the Friday night and Saturday in a westerly direction, but it was altogether of such slight intensity, that it had almost disappeared as a distinct depression during its westerly movement, and it also only brought extremely light rain in most instances to the districts through which it passed.

During the first three or four days of the week, while there was the slight oscillating action between the two wind systems as before described, conditions were apparently favourable for the production of rainfall in the districts near the hills, and thus heavy rain was reported from North Bengal, North Behar, and Behar generally, while conditions were not so favourable to heavy rain in such districts as South-West Bengal and Orissa. Again, after this oscillating action had ceased, and during the formation of the two feeble barometric depressions above alluded to, the monsoon winds were to a certain extent kept back from their advance over the Province, and thus during this period rainfall over the Province became lighter, and as the depressions were of such feeble nature, they brought little or no rain to compensate for the partial stoppage of the monsoon current. Except, then, in the district of North Bengal and of Behar generally, rainfall has been comparatively light, and, as will be seen in the review of the rainfall, all the districts except those mentioned have received decidedly deficient rainfall for the week.

Pressure—Was during the previous week slightly in excess over the Province, the average excess for the week being 0.012". The tendency of the changes during the present week has been to intensify the excess pressure, and the average variations for the whole Province for the week has been an excess pressure of 0.03" above the normal. The excess pressure, as may be expected, has been smallest in Orissa and at the southern stations in South-West Bengal, but excepting in these localities the excess pressure has been nearly evenly distributed. The variations of pressure during the week have been of the usual oscillatory character, and thus on the Saturday and Sunday pressure generally fell at all stations, and this was succeeded by an increase of pressure on the Monday, and to a certain extent on the Tuesday. For the remainder of the week the pressure variations were to a great extent dependent on the formation and movement of the barometric depressions, which have been previously described.

Temperature—Variations have generally been small during the week, and except in Orissa and at some of the southern stations in South-West Bengal, temperature has been generally below the normal by small amounts. The variation from the normal temperature is generally very small, and the largest variation is a defect of 1.2° in North Behar, while the greatest excess is of 0.3° in Orissa; for the whole Province the average variation has been a defect of 0.6°.

The character of the prevailing winds has been to a great extent discussed previously under the meteorology for the week, and it will have been seen that, for a considerable part of the week, light winds brought up by the Bay of Bengal monsoon current have prevailed over almost the whole of the Province, though during the formation of the two small barometric depressions, cyclonic circulation of winds was distinctly perceptible round the areas of low pressure.

The rainfall for the week has neither been so continuous or so heavy as during the previous week. It is true that fairly general rain fell in all districts except Orissa, and

some parts of South-West Bengal, for the first three or four days of the week; but the only districts in which the rainfall was really heavy were North Bengal, North Behar and to a certain extent South Behar. For the latter part of the week rainfall was decidedly less general, and in very few instances were anything like heavy falls registered. For the whole week the average amount of rain which has fallen in North Bengal has been 4.19 inches against the normal fall of 2.88 inches, which is no less than 45 per cent. in excess of the normal. In North Behar the average amount recorded for the week has been 2.30 inches against the normal fall of 2.05 inches, which is 12 per cent. in excess. In South Behar the fall was 2.21 inches against the normal 2.26 inches, and therefore in this case the fall was only 2 per cent. in defect of the normal. In South-West Bengal the amount registered has been 1.30 inches against 2.60 inches, or a defect of 50 per cent. of the normal fall. East Bengal has received 1.40 inches against 3.69 inches, which is equal to a defect of 62 per cent. Chutia Nagpur has received 1.59 inches against the normal 2.94 inches, and is therefore 46 per cent. in defect, while finally Orissa has recorded 1.62 inches against 3.62 inches, and the defect in this instance is 54 per cent. Some of the particular districts have received very heavy falls during the week, and thus Dinagore registers no less than between eight and nine inches of rain, while the normal fall is only 2.4 inches, and at Churaman the very large amount of 10.88 inches fell in the week. The Maldah and Purneah districts also report good heavy rain. The rainfall on the whole has, however, been fairly well distributed in the districts, and there do not appear to be any particular instances where districts have during the week, been extremely deficient in rainfall beyond the other or neighbouring stations, though of course as large tracts of the country have received deficient rainfall during the week, so also a large number of the districts are very considerably in defect. The actual number of rainy days during the week has been rather more nearly normal than the rainfall itself, and thus it may be concluded that the showers which have fallen this week have been decidedly lighter than usual.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 17th of July 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean relative humidity ... 86
 The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 86

The total fall of rain from 12th to 18th July 1885 ... 1.10
 The average fall of the corresponding period for 24 years, S. G.'s Office ... 2.92
 The total fall from 1st January to 18th July 1885 ... 25.14
 The average fall of the corresponding period for 24 years, S. G.'s Office ... 28.69

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

c overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lightning.

ALEXANDER PEDLER.

METEOROLOGICAL OFFICE, INDIA;
 Calcutta, the 20th July 1885.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 20th July 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE main facts disclosed by the vital statistics of the principal Municipalities in Bengal for the week ending 4th July 1885, as exhibited in the table appended to this Memoranda, are:—

1. That births and deaths were recorded in these Municipalities in the proportions per 1,000 of population of 33.0 and 29.6, respectively, as opposed to 21.0 and 28.8 per 1,000, respectively, during the preceding week ending 27th June, indicating an improvement in the registration of both events, especially of births.

2. That these events were recorded in the highest proportions in the following Municipalities:—

Deaths.		Births.	
Ratio per mille.		Ratio per mille.	
Poori	67.2	Gya	42.3
Mozufferpore	60.8	Bhagnapore	37.1
Chittagong	56.4	Monkhyr	36.2
Durbhanga	45.6	Chittagong	33.2
Gya	43.7	Serampore	33.4
Midnapore	38.7	Patna	31.4
Arrah	33.5		
Serampore	33.4		
Darjiling	32.6		
Suburbs of Calcutta	30.8		
Patna	30.8		

3. That the diseases specified in the table above alluded to furnish the death-rates exhibited below, in contrast with the results of the preceding week:—

Ratio per mille during week ending—

4th July 1885. 27th June 1885.

Cholera	6.1	8.1
Small-pox	3	6.3
Fever	10.7	9.6
Bowel-complaints	3.6	4.1
Injury	6	4
Other causes	8.8	8.1

Denoting that there was a sensible abatement in the death-rate from cholera with an increase in that from fever, and that the casualties from the rest of the diseases exhibited only fractional differences.

4. That while the mortality from bowel-complaints and injury was nowhere noticeably high, the Municipalities named below were reported to have returned the highest death-rates from the rest of the diseases indicated in the above table:—

Cholera.		Small-pox.		Fever.		Other causes.	
Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.	
Poori	40.2	Mozufferpore	7.3	Darjiling	26.1	Gya	15.7
Durbhanga	22.8	Dacca	2.6	Comillah	23.1	Midnapore	13.9
Chittagong	21.1			Mozufferpore	23.1	Serampore	13.7
Mozufferpore	14.6			Chittagong	21.1	Puri	12.6
Midnapore	10.8					Suburbs of Calcutta	12.4
Gya	5.6						
Suburbs of Calcutta	4.5						
Monkhyr	4.5						

It will be noticed that the mortality from cholera in the Durbhanga town, although yet high, was considerably below that of the two preceding weeks, indicating that its virulence is subsiding; that the disease prevailed with greater severity in the Chittagong town than during the preceding week; and that it has commenced to exhibit marked fatality in the Puri town, connected no doubt with the presence of pilgrims in it.

5. That the mortality according to Sex, Class and Age stands as follows:—

According to Sex.		According to Class.		According to Age.	
Ratio per mille.		Ratio per mille.		Ratio per mille.	
Males	31.1	Christians	31.4	Under 1 year	204.1
Females	27.9	Hindus	21.7	1 and under 5 years	47.9
Ratio of male deaths to every 100 female deaths	126	Mahomedans	25.7	5	22.6
		Buddhists	24.2	10	12.7
		Other classes	72.8	15	21.4
				20	20.1
				30	20.5
				40	18.8
				50	26.8
				60	45.9
				60 years and upwards	45.9

Statement showing the Results of the Registration of Deaths in the Districts in Bengal for the month of May 1885.

|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|--|

MEMORANDA.

The table appended to this Memoranda shows—
 1. That during the month of May 1885, the deaths of 114,106 persons were recorded in the districts in Bengal, among a population of 66,163,884 yielding a death-rate of 20·64 per 1,000 per annum, against 21·36 per 1,000 in the preceding month, and 20·88 per 1,000 in the corresponding month of the past year; indicating, as compared with the results of the preceding month, a decline in the registration of deaths.
 2. That the highest death-rates were returned from the following districts:—

Deaths.		Deaths.	
	Ratio per mille.		Ratio per mille.
Rajshahye	...	Bactergunge	60·49
Maldah	...	Bogra	40·44
Birbhum	...	Jalpaiguri	37·44
Burdwan	...	Murshidabad	36·24
Purnea	...	Jessore	33·60
Nuddea	...		32·40
3. That there was no variation in the mortality from all the specified death-causes excepting small-pox and fever, which exhibited only fractional differences—			
Ratio per mille during—			
	May 1885.		May 1884.
Cholera	3·60		3·60
Small-pox	21		21
Fever	12·96		12·84
Bowel-complaints	84		84
Injury	36		36
Other causes	2·40		2·40

4. That while the death-rates from bowel-complaints and injury were nowhere noticeably great, and small-pox and the malades grouped under the head of "Other causes" proved conspicuously fatal, the former in Chumpan at 3·36 per 1,000 of population, and the latter in Puri at 11·04 per 1,000, cholera and fever exhibited greatest activity in the following districts:—

Cholera.		Fever.	
	Ratio per mille.		Ratio per mille.
Rajshahye	29·89		29·16
Maldah	21·60		26·80
Birbhum	16·84		24·24
Burdwan	14·16		22·44
Bogra	7·56		...
Bactergunge	6·72		...
Manbhum	6·48		...
Purnea	6·24		...
Nuddea	6·12		...
Mymensing	5·16		...
Cuttack	4·80		...
Jessore	4·68		...
Dinajpur	4·32		...

5. That in relation to Sex, Class and Age, the death-rates during the month under notice stands as noted below:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	22·92	Christians	14·16	Under 1 year	102·84
Females	18·48	Hindus	19·44	1 and under 5 years	23·28
Ratio of male deaths to every 100 female deaths	122	Mahomedans	23·64	5	11·52
		Buddhists	12·48	10	10·44
		Other classes	13·44	15	16·48
				20	16·20
				30	17·04
				40	21·36
				50	28·20
				60 years and upwards	43·80

GENERAL REMARKS AND EXPLANATIONS

In seven out of the thirteen heads under which the total traffic of the line is shewn there has been a serious falling off aggregating 1,950.95 tons as compared with last May's results.

The principal decreases are in food-grain, gunny-bags, piece-goods, salt and seeds, and can fairly be attributed to trade fluctuation and causes beyond control.

INCREASES.

Ginger ... Tons 446.69
A decent crop and good demand will explain this increase.
Jute ... Tons 646.40
Loose jute must be in demand and imports are coming in. The weather for the new crop is reported favourable.
Miscellaneous ... Tons 78.56
The fluctuations of the traffic under this head continue to be influenced by local despatches of timber, bullies, lime, &c.
Sugar ... Tons 57.64
A slightly more active local enquiry has set in, but it is doubtful if it will last.
Tea ... Tons 209.00
Prices quoted are two annas over last year's opening rates, and hence teas of good flavor met with prompt sale.
Tobacco ... Tons 598.54
The enquiry in Calcutta and Rangoon mentioned in last month's report has caused this improvement.

DECREASES.

Ale ... Tons 30.49
This traffic is subject to small fluctuations consequent on the number of troops at the depot.
Food-grain ... Tons 2,198.90
No business is doing in any description of rice, and the local demand for paddy has fallen off.
Gunny-bags ... Tons 119.85
Both prices and demand have declined.
Piece-goods ... Tons 355.11
The setting in of the rains always checks this traffic to a certain extent.
Railway material ... Tons 98.47
During the month no sleepers came forward for the Engineering Department.
Salt ... Tons 722.45
It is difficult to explain this large decrease in the face of excessively low railway freights and an active jute market. The dullness of the rice and paddy traffic may, however, account for some of this, for I find that the merchants of these staples also have return consignments of salt sent them for value of downward rice and paddy consignments.
Seed ... Tons 467.51
To induce business, the present prices demanded by senders must be reduced.

G. S. LEONARD, *Traffic Superintendent.*

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 27th June 1885.

The 28th July 1885.—The Administration Report of the Meteorological Reporter to the Government of Bengal, for the year 1884-85, is published for general information.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

ADMINISTRATION REPORT OF THE METEOROLOGICAL REPORTER TO THE GOVERNMENT OF BENGAL FOR THE YEAR 1884-85.

THE Bengal Meteorological Department was under the control of the permanent head of the department, Mr. John Eliot, from the beginning of the official year until the 9th of December 1884, when Mr. Eliot proceeded on furlough. From this date till the close of the official year the department has been under my charge.

During the year under review, the extended scheme of meteorological observation, and the special arrangements for the speedy transmission of the meteorological and rainfall observations taken throughout the province, together with their speedy reduction, collation and publication through the various publications of this office, which were sanctioned in the year 1882-83 and brought into action in 1883-84, have been carried out steadily. The details as to the extent and nature of the observations which are now made, together with the method of collection of the returns, and the manner in which such returns are utilized for the information of Government and for subsequent publication, have already been fully described, first, in the form of proposals in the Administration Report of 1882-83; and secondly, in the Administration Report of 1883-84, where a full description was given of the arrangements which had been made to carry out the wishes of the Bengal Government in this matter.

During the year there has been no change or addition to the number of the regularly constituted observatories in Bengal and Assam of the second and third classes. There was only an addition of one observatory

to the list of provincial third class stations, viz., Bogra,* which was started from the 2nd December 1884. The total number of stations thus reporting to the Bengal Meteorological office during the year were one first class (Alipore observatory), seven second class, fifteen third class, and twenty-three provincial third class observatories.

Sanction was given to the establishment of observatories at three other stations during the year, viz., one at Tezpore in Assam, which is to be an imperial third class observatory, and two other provincial third class stations at Krishnagore and Maldah in Bengal. But owing to difficulties in the selection of suitable sites for the observatories and to other delays, they could not be started within the official year. In the case of Tezpore and Krishnagore, Mr. Eliot found it necessary personally to visit the stations for the selection of the sites for the respective observatories. The Magistrate of Bankoora (Mr. Anderson) proposed to start a voluntary observatory at his station, which would furnish observations for the Bengal daily weather report, and sanction was given to this proposal by the Meteorological Reporter to the Government of India in August 1884. A shed was provided by this Department, and it is hoped that the observations which will be received, will be useful to give indications of the weather over a large area which is practically now unrepresented by any regular station, except distantly by Raneegunge.

Second class observatories.—These are seven in number. Five are in Bengal and the remaining two in Assam. The names of the superintendents and observers at these stations are given in the following table:—

Second Class Stations.

Stations.	Superintendents.	Superintendents' allowances.	Observers.	Observers' allowances.	Assistant observers.	Assistant observers' allowances.

(11) „ 16th August 1884 to 5th September 1884.

* Received special allowance of Rs. 10 per month for meritorious services.
† Ditto ditto of „ 5 „ for good services.

Five of these observatories are provided with self-registering anemographs. The anemographs at Dhubri, Hazaribagh, and Cuttack are of the Casella pattern, which record the wind direction and amount at intervals of one hour. The remaining two stations, Saugor Island and Chittagong, are provided with Beckley's anemographs, which register wind direction and amount continuously. There were very few breaks exceeding 24 hours in the working of these self-recording instruments, and in the majority of instances the cause of them has been the necessity for cleaning and repairing the instruments, and there have been extremely few stoppages which could possibly have been avoided.

Two of these observatories were visited during the year, viz. Hazaribagh and Cuttack, by my head clerk, who reported as follows:—

“The *Hazaribagh* observatory was inspected on the 26th October 1884. No change has been made in the position and exposure of the instruments since the last inspection of the observatory by Mr. Eliot in December 1882. The observer was punctual in taking the observations, and, generally speaking the condition of the observatory was fair, but there were some defects which call for notice.

“The anemograph was found to work smoothly, but the chain connecting the wind-vane to the recording part of the instrument was found to have lengthened slightly, and failed to secure a good hold of the cog-wheels for fixing the direction indicator on the dial of the instrument. One link was therefore taken off the chain to remove the defect, and the instrument worked more satisfactorily. The anemometer requires to be changed for a better one, as it works rather heavily.

“The pad of the grass minimum thermometer was in shreds. The grass minimum was being exposed on grass on earth. The observer should have reported these facts.

“I examined the observer and his assistant thoroughly, and found that both did well and read the instruments fairly. They make very few mistakes.

“The records of the observatory were all in confusion.”

The observatory has continued to maintain a good character for correct and punctual submission of returns, but the inspection report shews that though in fair working order, it was scarcely in such good condition as would have been the case had the observer taken a warm and intelligent interest in his work, and his personal allowance was only retained on his assurance to pay proper attention to his duties.

Cuttack observatory “was inspected on the 3rd February 1885. No change of importance has been made in the position of the shed or in the arrangement of the instruments since Mr. Eliot’s inspection in January 1883. The thermometer shed required repairs. The instruments were clean and in very satisfactory condition. The observatory continues to maintain its high character and is thoroughly satisfactory in its equipment and accurate and valuable in its observations. Mr. Alley, the observer, and his assistant, were examined, and both acquitted themselves well, and were correct and quick in their observations.” The observatory has been provided with a lightning conductor at the expense of the Meteorological Department for the protection of the wind instruments.

The Dhubri observatory shed was destroyed by fire on the 6th April 1884. Complete observations had therefore to be suspended from that time to the first week of November 1884, when a new shed was built and the observations resumed. Incomplete observations, however, were telegraphed to the Meteorological Reporter to the Government of India, giving the barometer readings and the wind and rain observations for the purposes of the India weather reports. Observer Maniruddin Ahmed, who was a recipient of a ten-rupee special allowance, was granted sick leave for six months from 6th May 1884, and as the full set of observations had to be suspended, it was not found necessary to arrange for another head observer, but the assistant observer carried on the partial observations necessary. Observer Maniruddin Ahmed died on the 2nd November 1884, and Kadimuddin Ahmed was appointed in his place on probation.

The rest of the observatories of the second class continued to furnish very satisfactory returns throughout the year. There have been very few breakages of the instruments in these stations. In some, however, old instruments have had to be replaced either for defect or for their being worn out by long use. At Cuttack the sun radiation thermometer was broken by a sudden hailstorm while under exposure. Owing to the breakage of this instrument, which had been always exposed on forked sticks according to the old plan, it was considered desirable, when a new instrument was supplied in May 1884, to bring its conditions of exposure into conformity with the standard regulations in the *vade-mecum* by providing the observatory with the usual stand for the exposure of the sun thermometers.

The readings of the Saugor Island barometer had to be rejected for the period 8th February to 15th March 1885, consequent on the instrument having

It will thus be seen that on the whole the work at the second class stations has been very satisfactorily performed, and that it has been fully equal to that of former years. The returns have been punctually submitted, and there have been few, if any, causes of complaint in the working of these stations.

Imperial third class observatories.—These are fifteen in number. Ten are situated in Bengal, one Akyab in Burma, two Silchar and Tura (voluntary observatory) in Assam, and two Gopalpore and Coconada in Madras. The two last are maintained in connection with the Bay of Bengal storm signal service.

The following table gives the names of the superintendents and observers at these observatories during the year 1884-85 :—

STATIONS.	Superintendents.	Observers.	Observers' allowances.

- (30) 17th November 1884 to 31st March 1885.

Of the third class observatories very few required inspection. Five stations only were visited during the year—Darjeeling, Durbhanga, and Jessore by Mr. Eliot, and Gya and Falae Point by my head clerk.

The Casella anemograph provided in 1882 for the Darjeeling observatory having failed to give workable anemograms, particularly during the cold weather months, notwithstanding that the observer Mr. Moore and the Superintendent Mr. Carter, had devoted much time and skill in endeavouring to make the instrument work satisfactorily, Mr. Eliot thought it desirable to personally inspect its working at a period when it usually gave bad results, and he therefore visited the station in November 1884, and after a careful examination of the instrument recorded his opinion that it would never work satisfactorily, and he desired that it should be dismantled and replaced by a self-registering anemograph of Beckley's pattern. An instrument of this description was therefore put in order, and was sent up early in March, and I was able to visit the station during the latter end of March 1885, to superintend its erection and starting. The Beckley's anemograph has now been set up in a substantial manner on the roof of a small house at the summit of Mount Vernon, the elevation of which is 7,599 feet. The anemograph is in a thoroughly satisfactory position as to exposure, and the instrument is one which always yields excellent results, and under the careful supervision of Messrs. Carter and Moore it is to be expected that very valuable records will be obtained of the movements of the upper strata of the atmosphere, which will increase our knowledge of this branch of Indian meteorology in a manner hitherto unobtainable.

The Berhampore observatory under Baboo Mahendra Nath Roy and the Burdwan observatory under Baboo Mokshoda Prosad Roy Chowdhury have continued to work in a highly satisfactory manner, and these observers have well maintained their previous reputation.

The Jessore observatory having improved very materially in its condition and in the character of its observations, the observer, Baboo Puresh Nath Roy Chowdhury, has been recommended for a personal allowance of Rs. 5 per month. Hitherto the thermometers in the observatory were exposed in a wooden cage of the old pattern, but this has been replaced by a cage similar to those now used in our other observatories.

Gya observatory ceased to be furnished with radiation thermometers from 1882 by order of the Meteorological Reporter to the Government of India, as the breakages of these fragile instruments were more numerous than at other stations. I regret to have to report that there has been little or no improvement in the accuracy of the returns received from Gya. Mr. Eliot, in the Administration Report for 1883-84, hinted at the worthlessness of the minimum thermometer readings. He suspended the meteorological allowance of the Gya observer from 1st April 1884 for wrong readings of the minimum thermometer and for his not taking due precautions to find out the cause or source of the errors which had been pointed out to him more than once. A new minimum thermometer was then sent to the Gya Observatory to replace the old instrument in order to see if the defective readings were due to a bad thermometer, but the observer continued to give the readings from the indications of the old instrument. Another fresh cause of complaint was found in the readings of the anemometer. The observer was telegraphing wrong wind velocities, notwithstanding that his attention had been repeatedly called to the fact. Thereupon the office head clerk was deputed in November 1884 to investigate into the cause of these erroneous readings, and he reported that he found the minimum thermometer which had been sent had remained in store with the spirit column broken, and that no report of the fact had been ever made, nor was the instrument ever used. The Head clerk examined the old minimum thermometer and found it to be in good order, and this confirmed the belief that the observer had neglected his duties, and the wrong readings were mainly due to his want of attention to the regulations for reading the instrument. It had been the intention to take comparative readings, but this object was frustrated by the observer not bringing the new instrument into use, or reporting it as out of order, when a fresh thermometer could have been sent. The defect in the wind velocity readings was due to the observer's incorrect method of calculation in finding out the appropriate word from the code to

telegraph his results. For these faults the observer was fined two months' pay. The observer, however, has since improved in his readings of the barometer, and it is hoped he will continue to furnish satisfactory readings of the rest of the instruments. If the observer fails in his duty in this respect, it will be a matter of question whether some other agency than the Civil Surgeon's clerk should not be sought for to carry on the duties of the observer.

The Akyab observatory has improved considerably in the character of its observations. The observer, however, had to be fined Rs. 10 in June 1884 for having broken a grass radiation thermometer by plunging it into warm water. He had taken this step on the supposition that it would unite the broken column of spirit in the thermometer.

Having regard to the frequent breakage of nocturnal radiation thermometers at Cachar, the issue of these fragile instruments has been prohibited by the Meteorological Reporter to the Government of India in accordance with the terms of his office circular No. 1, dated 3rd April 1882, with effect from November 1884.

Generally speaking, the returns from the rest of the observatories of the third class was satisfactory. The following are the reports of inspection of some of the observatories. Of the five observatories inspected, three, viz. Darjeeling, Jessore, and Durbhanga, were visited by the Reporter, and two, viz. Gya and False Point, by my head clerk.

Darjeeling was visited on the 28th November 1884. The barometer and thermometers were all in good order, except the dry minimum, in which a small portion of the column was detached. Instructions were given as to the method to remedy this permanently, but if the defect continues, it would be desirable to supply another instrument.

"The anemograph was examined. I am of opinion that it will not work satisfactorily. Mr. Moore has spent much time in endeavouring to obtain workable anemograms. The wind direction stamp does not come down with sufficient force to give a clear impression. During the cold weather months of the year the amount of wind is so small as to be unable to move the wind-vane. The friction is much larger than that of small anemometers. As the position of the anemograph shed is well exposed, I think it would be advisable to supply a Beckley's instrument, and ascertain if good results could not be obtained by means of the continuous registration which it would effect."

Jessore observatory was inspected on the 2nd December 1884. The barometer was in good order. The thermometer shed is not in a very satisfactory position, being much shut in. The instruments are all in good order. A slight encrustation was found on the wet bulb thermometer, and the observer was instructed to remove it in future. The solar radiation thermometer has a small portion of mercury lodging at the extreme end of the tube, which the observer allows for in his readings (adding 1.2°). The wind-vane and anemometer were in good order. The latter was on a shaky wooden pillar which was ordered to be replaced by a brick pillar of same height.

The observer took the readings of the instruments readily and correctly. As his observations have been found to be very satisfactory, the observer has been recommended for Rs. 5 special allowance.

Durbhanga observatory was inspected on the 8th October 1884. It was found to be in much better condition than on any of my previous visits. The thermometers were clean and in good order. The anemometer was found to be working satisfactorily. The wind-vane is a very heavy one, and should be replaced by a lighter one.

Gya observatory was inspected on the 21st October 1884. The barometer was in the same position, as on last inspection and perfectly clean. The observer read the instrument correctly.

The shed thermometers were found to be perfectly clean. The graduations on the maximum and the wet minimum thermometers were obliterated.

The anemometer was found to be perfectly clean and in good condition, but it required to be fixed firmly on to the wooden platform.

The thermometer cage was shaky and required to be made firm, as there was likelihood of the readings being disturbed by a gust of wind.

The thatching of the shed was good, but some of the posts have been eaten up badly by white ants, and may with advantage be replaced.

False Point observatory was inspected on the 14th February 1885. It is situated on an open maidan outside the Light-house compound. The thermometer shed is enclosed by a fence of lattice work. The radiation thermometers are exposed within the enclosure on their proper stands. The observatory required thorough repairs. The fencing and the posts require to be looked after much oftener to prevent the white ants from causing injury. All the wood-work should be completely tarred.

The barometer was in the same position as on last inspection. The instrument was in perfect order and clean. It was quite vortical.

The cage instruments were all in good order and perfectly clean. The observer reported to me that the grass thermometer gave him much trouble as the spirit column was found to break very often. I found on inspection that a part of the spirit about 2" in length remained lodged at about an inch and a half from the top end of the tube, and the instructions in the *vade-mecum* failed to unite it with the main column. This instrument should be changed.

The sun thermometer was found to have a break in the mercury column below the index. The instrument is of the Phillip's principle. The break was not noticed by the observer, but was set right again with slight effort. The separation was but little.

The anemometer is placed on a pillar 20 feet high. The instrument worked well, but apparently with friction.

The rain gauge was in good order.

During my visit the observer, Mr. Workman, was ill, and so I had to inspect the observatory with his assistant, who also takes the readings. Mr. London read the instruments quickly and correctly.

The observatory, generally speaking, appeared to be one of the best kept stations in Bengal, and its neat condition testifies to the amount of interest and care taken by the observer in his work.

It may therefore be stated that the majority of these third class observatories are satisfactory in character, and the observations which have been received from them have on the whole been very reliable.

Third class provincial observatories.—The following table gives the names of the third class provincial observatories which have been working during the past year, together with the names of the superintendents and of the observers:—

* Commenced from 1st December 1884.

These stations have on the whole done satisfactory work, and the readings which have been recorded and submitted to the office have been generally reliable. Of course instances have occasionally happened of wrong readings due to carelessness, but the proportion of them has been comparatively small, and they have been, as a rule, readily detected. Instances of incorrect readings having been submitted as the result of ignorance of the correct methods of reading the meteorological instruments have also occurred, but they have not been common, and so far as has been possible, when instances of such errors have been detected, every endeavour has been made either by a visit of inspection or by correspondence to correct the errors and to prevent them from occurring in future.

Of the provincial third class observatories, eleven have been inspected. Two of them, Julpigoree and Dinagapore, were inspected by Mr. Eliot; two, Ranigunge and Arrah, by myself, and the rest, Balasore, Rampore Beaulash, Dinagapore, Rungpore, Julpigoree, Bogra, Ranchee, and Chyebassa, by my head clerk. It

The mouth of the rain-gauge was not level, but this has since been attended to.

The observer, who is the clerk of the Civil Surgeon, received instructions for reading the instruments from the Alipore observatory, and while under examination he conducted himself well and took the readings readily and correctly.

Generally speaking, the neat condition of the observatory does credit to the officer in charge, who is untiring in his efforts to secure perfect registration of the instruments.

Arrah observatory was inspected on the 4th January 1885.

The thermometer shed is of the standard pattern, and was in fairly good repair. The thermometers and cage were not so clean as they should have been, and the observer was instructed to dust and clean them once a week at least. The muslin on the wet bulb thermometer was rather too thick, and owing to well-water being used, there was a slight encrustation on the bulb, which was removed as far as possible.

The barometer was in an excellent position and very clean, but it was not truly perpendicular. This was rectified. The readings of the barometer were compared with a standard taken from Calcutta, and the error of the instrument was found to be unaltered.

The wind-vane has been so erected that there is no access to it, and it has not been oiled and cleaned since it was put up. The readings were proved to be actually valueless. The wind-vane should be taken down from its present position, and erected in such a position that the instrument can be cleaned, oiled, &c., at the same time as the anemometer is attended to.

The anemometer was clean, but it was sadly in want of oil, and the wind velocities reported lately are clearly below the true velocities. The observer was asked to oil the instrument regularly once a week. The observer reads the barometer very well, but can only read the thermometers to full degrees.

Ranchee.—The civil station of Lohardugga is situated on the high central plateau of the district which is undulating with heights ranging from 800 feet to 3,600 feet above sea-level. The highest part of the plateau lies about 8 miles south-west of the station of Ranchee, where the ground is about 2,500 feet above the sea. On the south the hills run east and west, and on the north the plateau abruptly falls to the valley of the Damodar river, about 16 to 18 miles off the station.

The observatory was inspected on the 30th and 31st October 1884. It is situated in an open field close to the circuit-house, the jail, and the Revenue and Public Works offices.

To the west of the shed at a distance of about 20 feet is a public main road. Further west at a distance of about 300 feet are the circuit-house and the dāk bungalow, and further off from the building at a distance of about 100 to 150 feet to the west and north-west there are four big trees with spreading branches, which overtop the building on those sides. The north is perfectly open for some miles, but bordered with a range of hills at a distance.

The barometer is kept in the Executive Engineer's office room at a distance of about 400 yards from the shed. It was clean and well placed and quite vertical. The level of the instrument has been determined from the nearest bench mark.

The thermometer shed is well built of the standard pattern and well enclosed by a wooden fence. The shed required repairs. The thermometers are freely exposed inside the cage, and were found to be in good order. The bulb of the wet hygrometer was quite clean, but the muslin was set rather loosely.

The rain-gauge is placed a few yards off from the shed, and well enclosed by a fence which requires partial repairs. The gauge was found quite clean and perfectly level.

The anemometer and wind-vane were kept in store since receipt, as some misconception existed in the mind of the Executive Engineer as to the selection of a proper site for the instruments. The question had been previously referred to this office, but it was kept in abeyance, pending a visit to the station.

Considering the surroundings, I am of opinion that these wind instruments should be set up on poles or brick pillars in the open field, where the observatory is situated. This will secure a free exposure for the instruments from winds from almost all sides. The observer and the Executive Engineer have been asked to submit estimates of the cost of both wooden staging and brick pillars for the anemometer.

The Public Works Department overseer, who was in charge of the readings, was examined in the presence of the Executive Engineer. He was found to read the barometer a hundredth too high, due to wrong adjustment of the vernier, a result of weak eyesight. A lens should be supplied for this station.

Chyebassa observatory was inspected on the 5th and 6th November 1884. The central portion of the Singbhoom district is occupied by a long undulating tract of country running east and west, and enclosed by great hill ranges which block the view on every side. Directly north of the station of Chyebassa, at a distance of about fourteen miles, stands the range of Chaitanpore Ghâts, which attain an elevation of about 2,500 feet; 12 miles to the south-west of the district is a series of hills without any general name, which rise to a height of 3,500 feet.

The observatory is situated in the kutchery compound, a place not so well suited for an observatory, but it was the only available ground belonging to Government where it could be started. The compound is full of trees on all sides. The east is fairly open, the west is not free for wind circulation from the existence of several big trees, the north is blocked by the range of kutchery buildings (20 feet in height) and trees, and to the south there is a small hillock and a line of trees.

The thermometer shed is well built and of the standard pattern. It is well enclosed by a strong wooden fence. The thatching of the shed requires repair.

The barometer is kept in a room in the zillah school compound at a short distance from the shed. It was in good condition and in vertical position. The height of the cistern of the instrument above sea-level has not yet been ascertained for want of a datum level.

The shade thermometers were all in good order, with the exception of the maximum thermometer, which has ceased to be a self-registering instrument. The readings hitherto taken are evidently erroneous, and a new thermometer should be supplied to the station.

The rain-gauge is placed very near the shed, and within the fence. It is therefore in a very bad position. It should be removed further off to a spot pointed out to the observer and Dr. Manook. It is in good condition.

The anemometer and wind-vane are placed on the top of the shed by means of a four feet wooden post fixed on to the ridge. They are therefore very badly placed, and should be removed to a spot within the compound pointed out to the observer, and be set up by means of wooden posts and a platform. The place is all full with trees, and so perfect registration is impossible. The Deputy Commissioner objects to allow the wind-vane and anemometer being placed on the top of the kutchery.

The instruments generally are well looked after. The neat condition of of the observatory reflects much credit in the officer in charge and the observer.

Julpigoree observatory was inspected a second time on the 26th November 1884.

The observer read the instruments better than on my previous visit, although he still appears to have some hesitation in reading them.

The main object of visiting the observatory was to ascertain the cause of some very low readings of the minimum thermometer, which were found to be due to the readings of the lower instead of the upper end of the index having been taken by mistake. The observer was ill at the time, and the readings were taken by a friend.

Dinagepore observatory was inspected on the 26th November 1884. A brief comparison was made between the barometer and a secondary standard taken from Calcutta. Its correction (+0.009) was found to be unchanged. The observer read the instruments correctly. The thermometers were all in very good order and quite clean. The shed is in perfect order. The wind-vane and

must also here be noticed that among the observatories visited by the head clerk are Balasore, Ranchee, Chyebassa, and Bogra, which have hitherto never been inspected. The inspection reports for the provincial third class observatories, it will be seen, indicate that they are kept in fairly good condition by the observers.

Balasore was visited on the 20th January 1885. The town lies about seven miles from the sea coast in a straight line, and about eight or ten miles to the east of a range of the Mourbhanj hills.

The site of the observatory is fairly open. To the north at a distance of 41 feet from the shed there is a tope of seven mango trees. To the north-east, at a distance of 60 feet, is the Executive Engineer's office building. The east, west, and south are almost perfectly open.

The shed is well built of the standard pattern, and the instruments in the cage well set according to the *vade-mecum* instructions.

The barometer is placed in the office of the Executive Engineer. The position for the instrument is not very favourable being on a wall in a narrow passage leading to the Executive Engineer's room, and it is, therefore, very liable to be disturbed by people passing. The barometer was found perfectly clean, and the observer appeared to read the instrument quickly and fairly correctly.

The thermometers were perfectly clean, except that there was a slight encrustation on the wet bulb. The observer was taught how to keep the instrument free of deposit in future.

The rain-gauge in use here is an eight-inch one and is well set and exposed. It was in good condition and perfectly level.

The anemometer and wind-vane were found to work well and were in good order. They are well placed. The wind-vane arrangement is excellent. Mr. Apjohn, the Executive Engineer, made his own arrangement for the wind-vane on the terrace of his office building, and which is not only very simple but very effective.

The observer could not read the anemometer correctly. Hitherto the indications of the fixed pointer on the inner circle of the dial were neglected, and only distances above five miles registered. The observer has been taught to read the instrument correctly in future.

The Executive Engineer appears to take every possible interest in the observatory, and its neat condition, punctual submission of returns, and the excellent condition of all the instruments speak very highly of the Superintendent in charge.

Rampore Beaulah was visited on the 20th December 1884. The observatory instruments were found to be clean and in good order.

The barometer has been removed from its old position to a wall in the sitting room of the Executive Engineer. This change did not affect the height of the cistern of the instrument above sea-level. The instrument was in good order and perfectly clean. When I examined the observer, who is the head clerk of the Executive Engineer, in this instrument, he appeared to set the vernier about .02 inch below the mercury meniscus.

The thermometer cage was incorrectly fixed, and it has since been altered. The ventilating pipe was found displaced and the aperture closed. This has been repaired. The hygrometers were in good order.

The wind-vane and anemometer were found to work well and smoothly. They were quite clean.

Generally speaking, the observatory is in fair condition and quite neat. The observatory requires little repairs.

Ranigunge observatory was visited on Friday, the 16th January 1885.

The observatory was found to be in good order, and the observer and his assistant were examined, and were found well up to their work.

The Ranigunge barometer was compared with a standard taken up from Calcutta, and the error was found to be practically unaltered. The office records were in good order.

Dinagapore observatory was inspected on the 17th July 1884. The instruments in the observatory were examined.

The barometer was not in vertical position, and as it had for some time been giving doubtful readings, the instrument was changed for a new one.

The shade thermometers were in perfect order, with the exception of the minimum thermometer. On my arrival at Dinagapore the observer reported the fact that the spirit column was not entire, but the instrument was made right by following the usual directions.

The other instruments were in good order. The wind-vane and the anemometer worked well, and were found to be oiled and free from dust.

The raingauge is in perfect condition. The observer, Baboo Behari Lal Banerjee, continues to maintain accuracy in his readings of the instruments, and to take active interest in the observatory, the condition of which does credit to him.

Rungpore observatory was inspected on the 19th and 20th July 1884.

The instruments were examined. The reported defect of the barometer was carefully examined, and as it appeared to give imperfect readings it was changed. The position of the instrument is not very safe, being on the way leading to the Collector's office and court-rooms. I propose therefore that the corner in which the instrument has been set up should be fenced in by wire netting on a wooden framework with a door which should remain closed against outsiders.

The shade thermometers are all in working order. The bulb of the wet thermometer was found to be encrusted. The observer was taught how to remove the deposit and keep the instrument clean in future. The observer when asked to read the thermometers read them by the whole numbers, and not to the nearest tenths.

The wind-vane and anemometer are in the same position as on last inspection, and appeared to work very well, and were found to be in perfect order. The wind instruments were correctly read.

The raingauge is in good condition, but the fencing round it requires renewal.

The observer reads the barometer carefully and well. The Assistant Engineer continues to take equal interest in the observatory as heretofore.

Julpigoree observatory was inspected on the 21st July 1884.

The barometer is in the same position as on the last inspection. The instrument was found to be in perfect working order, but its setting was not vertical, and it has since been placed in a vertical position. The observer read the barometer in a very unsatisfactory manner.

The shade instruments are in good order, with the exception of the wet bulb hygrometer, the bulb of which was found to have a thickish coat of encrustation. The observer was instructed in the method of keeping the instrument free from the deposit.

The wind-vane and the anemometer were found to work well and to be in good condition.

It is hoped that the observer will in future get on well under the direct superintendence of the Executive Engineer of the division, who takes the greatest interest in the good working of the observatory.

Bogra observatory was inspected on the 16th December 1884. The observatory is situated in the circuit-house compound on a fairly open site. The north is perfectly open, as also the east and west. To the south there is a garden full of mango and other fruit trees, but at a sufficient distance not to affect the exposure of the instruments. The zillah school compound is contiguous to the observatory, and special care should always be taken to prevent the boys from interfering with the instruments.

The shed is very strongly built, but of extensive dimensions, differing from those given in the *vade-mecum*. It is not of the standard pattern, but is of an oblong shape, and well surrounded by a bamboo fence. The barometer is placed in a room in the circuit-house with the previous permission of the District Magistrate. I had the barometer put up. The thermometers in the cage were well exposed and perfectly clean.

The anemometer and wind-vane have been placed on pillars on the roof parapet of the circuit-house, where they are very freely exposed, having no trees or larger buildings to obstruct the free air motion. The wind-vane was found to be wrongly set and the pointer was so fixed as to shew the direction opposite to the wind movement. This has been remedied. The anemometer required oiling.

anemometer are placed in a fairly satisfactory position on the roof of the Collector's kutchery, and were clean and in good order.

The observer appears to take the observations carefully and accurately, and the observatory is in a satisfactory condition.

Rain-recording stations—There has again been an increase in the number of rain-recording stations during the past year. The number of these stations during the past three years has been in 1882-83, 162, in 1883-84 it was 167, and in 1884-85 it was 172. This increase is due to the establishment of the following rain-fall stations in the Bancoora district:—

Indus, Kotulpore, Onda, Gangajalghatty, and Sonamukhi.

One station, however, viz., Lalgola in the Moorshedabad district, has been suppressed at the latter end of March 1885, consequent on the abolition of the Government charitable dispensary, the rain-gauge having been in charge of the Assistant Surgeon. Efforts will, however, be made to re-establish it.

During the past year prominent attention was called to the fact that some parts of the province were very inadequately represented by rainfall recording stations, and that Chutia Nagpur in particular only possessed 11 raingauges to represent no less than 26,966 square miles of country. To supplement the present registration system, and to extend the registration into districts which have hitherto been unrepresented, has been an urgent want of the department, and therefore during the last part of the year a scheme was drawn up, providing for no less than 72 additional rain-recording stations at an almost nominal cost to Government. The cost of nearly all the raingauges was met from the savings of this year's budget, and the annual cost will be simply the cost of the postage of the returns. With this extension, the system of registration will be fairly complete, and all parts of the province will be well represented. At the close of the official year the scheme was submitted to Government for sanction.

The returns from the great majority of the old recording stations were received punctually and regularly, and so far as can be judged the registration of the rainfall is effected with fair accuracy and with considerable punctuality.

Instruments.—The following tables show the number of instruments that have been broken or lost or rendered unserviceable during the year 1884-85 at the Imperial and Provincial observatories, and of the instruments supplied to them during the year. These tables shew that the observers on the whole take great care in the use of the instruments committed to their charge, and the record may be looked upon as fairly satisfactory.

Return of Instruments issued to the Observatories in Bengal and Assam, 1884-85.

Office establishment.—The office establishment on the 31st March 1885 consisted of the following clerks:—

Baboo Chandi Charan Chatterjee,	Head clerk.
" Purna Chandra Mukerjee,	2nd "
" Nibarun Chandra Chatterjee,	3rd "
" Kamini Mohan Bose,	Tabulator.
" Debendra Nath Banerjee,	"
" Joggeswar Roy,	"
" Bireswar Mookerjee,	"
" Jati Lal De,	"
" Rakhal Das Chackerbutty,	"
" Ashutosh Roy Chowdhuri,	"
" Hem Chandra Goswami,	"
" Haridas Mazumdar,	"
" Nagendra Nath Paul,	Draughtsman.

The clerks generally have worked extremely well in dealing with the large amount of correspondence, and in the reduction and tabulation of the large number of observations now received, and with the preparation of reports which are required under the present system. The following are the regular reports and maps which are issued by the office:—

- (a) The Bengal daily weather report, from about 15th May to the 7th of November, and the Bay of Bengal weather report, throughout the year.
- (b) The weekly and monthly meteorological and rainfall reports for the province published in the *Calcutta Gazette*.
- (c) Four sets of three rainfall charts monthly during the south-west monsoon period, 1884 *i.e.*, from May to November), showing by colours—
 - (1) The actual distribution of rainfall for the same month.
 - (2) The variation of the actual from the average rainfall, indicating whether it was in excess or in defect, and the amount of such excess or defect.
 - (3) The variation of the actual from the average expressed as a percentage of the normal fall.

The four sets were all drawn and coloured by hand. One set was forwarded about the 8th of the succeeding month (to that to which it referred) to His Honor the Lieutenant-Governor; a second set to the Secretary to the Government of Bengal in the Revenue Department; a third to the Sanitary Commissioner; and the fourth was kept for office reference.

- (d) Sets of tables giving the average and actual rainfall, and the difference between the actual and average rainfall (or variation) for each month of the year 1884, and for the whole year at 170 rainfall recording stations. These returns were published in the *Calcutta Gazette* of the 4th February 1885.

In addition to these a series of special returns and a series of special maps were prepared illustrating the distribution of the rains in Bengal during the south-west monsoon period of 1884, *i.e.*, from 15th May to 15th November. A short account of the distribution of the rains was also prepared. These were submitted to the Secretary to the Government of Bengal in the Revenue Department, and the special returns together with the meteorological summary of the rains were published with the resolution of Government dealing with the agricultural condition and prospects of the crops which appeared in the *Gazette* of the 19th November 1884.

These various reports necessarily entail a large amount of continuous and rapid work on the part of the office, and I have to place on record my appreciation of the zealous and intelligent manner in which the head clerk, Baboo Chandi Charan Chatterjee, has supervised the work of the office, and has also performed the work of inspection. Baboo Kamini Mohan Bose, who is in charge of the rainfall statistics, and Baboo Debendra Nath Banerjee, who is in charge of the daily reports, have also done excellent service during the past year, and have maintained their reputation as hardworking and assiduous clerks. The clerks generally have worked most satisfactorily, and have thus enabled the returns to be published punctually and without a break throughout the year.

Storm Signals.—No very severe cyclone was generated in the Bay of Bengal during the year 1884, but a number of small cyclonic storms occurred during the south-west monsoon period. As usual these small storms gave rise to strong winds and rough seas where they were generated over the Bay, and they brought heavy rainfall in their advance inland. These storms have all been noticed, and their history briefly traced in the usual meteorological monthly summaries published in the *Calcutta Gazette*. Two small storms of this description were generated in June, both of which crossed the Balasore coast. In July six small storms were formed, five of which were generated over the sea, and of which three crossed the Balasore coast and two the Orissa coast between False Point and Gopalpore, while the sixth storm was generated over the land area apparently in the Jessore district. In August two small cyclonic storms were generated, the first of which crossed the Balasore coast, and the second the Ganjam coast near Gopalpore. In September four depressions were formed, two over the land area and two over the sea, of which one crossed the coast near Chandbali, and the second between Gopalpore and Vizagapatam. In October two depressions were formed, one of which formed over the land, and the second, which was a large and shallow depression, formed in the centre of the Bay and advanced up the Bay in a northerly direction into Bengal, giving very heavy rain in its progress. Most of these storms, however, were of comparatively small intensity, and it was not thought necessary to hoist the storm signals except on two occasions, the first being on June 19th, and the second on July 10th. The signal which was hoisted on each occasion was the same, and signified that a small cyclonic storm would pass between False Point and Saugor Island, and the signals remained hoisted for about 24 hours for each storm, and with their passage inland the signals were lowered.

Daily Weather Reports.—The new form of the Bay of Bengal weather reports of the storm signal service has been continued this year with but slight modification. The reports were issued in blue and black instead of entirely in black, and advantage was taken of the establishment of an observatory at Midnapore and direct telegraphic connection with Jessore to add two more stations to the number of the stations sending observations for this report. The report, last year, furnished observations taken at 19 stations against 17 in 1883-84. An observatory has also been established at Burrisal, and the observations from this station will form a valuable addition to the existing number of stations on or near the coast of the Bay which furnish observations for the report. This report was supplied to 27 subscribers and 37 Government officials at the end of the year. The receipts for subscriptions during the year covered the cost of printing and distributing the reports. There was a small balance of Rs. 65-13-6 at the end of the year 1884-85, which was kept in hand in order to meet any repairs to the lithographic presses. The cost of printing the bi-color reports increased the expenditure on printing, and rather decreased the balance in hand during the year, but through the kind courtesy of Major Waterhouse the blue report forms are now being supplied to this Department from the Lithographic Branch of the Survey Department. Warm thanks are thus due to the Survey Department for assisting in the publication of these reports with neatness and despatch. The reports were published throughout the year without the break of a single day.

The Bengal daily weather reports which were commenced in 1883 were published last year during the period May 16th to November 7th, 1884. The number of stations which furnished observations for this report during the year was 32, which is one in excess of the last year. These reports were published and issued by the Bengal Secretariat Press, and were supplied to 102 Government officials and to three subscribers. It appears, however, that the report is now appreciated by the mercantile community and by the general public, and it is hoped that the number of subscribers to the report will increase with each succeeding year. That such will be the case is probable from the fact that with the commencement of the 1885-86 reports no less than 15 new subscribers have registered their names. A little more practical value would probably be given to these Bengal weather reports, if the observations of the Assam stations could be included in them, and the meteorological condition

of Assam and Bengal be discussed together in the review of the weather conditions daily, weekly, and monthly. But there are difficulties in the way of providing funds for the extra cost for the telegrams, &c., which may be necessary to give effect to these suggestions, and it is likely that the question may commend itself to the Assam Government for their consideration hereafter.

Copies of the weekly and monthly meteorological and rainfall returns (as published in the Gazette) were struck off for the convenience of the public, and were supplied at a charge just sufficient to cover the actual expense of printing and distribution.

Marine Meteorology.—The working of this department for the year remained entirely in the hands of Mr. W. L. Dallas, the scientific assistant to the Meteorological Reporter to the Government of India, so that no details can be given in the Bengal Administration Report as to the amount of work done and progress made in this branch of meteorological research. The returns sent in to the Indian Meteorological Office are, however, placed at the disposal of the Bengal Reporter, and the information has proved of much value in the preparation of special reports and accounts of various storms, the formation and history of which have been worked out by Mr. Eliot, and accounts of which have been published from time to time.

During the year an exceedingly valuable memoir was drawn up by Mr. Eliot on the south-west monsoon storms generated in the Bay of Bengal during the years 1877 to 1881, which has since been published as Volume II, Part IV of the Indian Meteorological Memoirs. Mr. Eliot also drew up an account of the south-west monsoon storms of the 26th of June to 11th of July and of 10th to 15th November 1883. This paper was published in the Journal of the Asiatic Society of Bengal, Volume 53, Part II. A third valuable paper was also drawn up by Mr. Eliot on the cyclone which passed inland near Akyab on the 17th of May 1884, but up to the present time this paper has not been published.

Expenditure.—The following statement gives the expenditure on account of the Bengal Meteorological Department during the year 1884-85, and the total grants sanctioned by Government under each of the various heads:—

HEADS OF EXPENDITURE.						Actual expenses incurred during 1884-85.	Budget grant for 1884-85.
						Rs. A. P.	Rs. A. P.
Meteorological Reporter's allowance	5,400 0 0	5,400 0 0
Office establishment	5,003 8 11	6,000 0 0
Office rent	1,800 0 0	1,300 0 0
Observers {	Telegraph masters, &c.	2,630 0 0	9,900 0 0
	Native observers	3,750 0 0	
	Provincial observers	2,680 0 0	
Messengers' allowances	171 0 0	171 0 0
Allowances to Superintendents of observatories	1,410 0 0	1,410 0 0
<i>Central Office.</i>							
Contingent and office furniture	965 0 0	886 0 0
Purchase of rain-gauges for equipment of rain-recording stations under proposed extension.	840 0 0
Postage	1,478 1 3	2,730 0 0
Telegraphic messages	15,691 0 0	19,150 0 0
Travelling allowances	1,316 10 0	1,030 0 0
<i>Observatories.</i>							
Building and repairs	1,237 10 3	1,250 0 0
Contingent	75 13 6	98 0 0
Total						44,911 11 11	49,475 0 0

The expenditure of the department for the year 1884-85 has been considerably greater than in the year 1883-84, but this has been due to the fact that in the previous year, owing to unavoidable difficulties in starting the new scheme of provincial observatories, many of these did not commence

The figures in the statement printed above give the total expenditure for the year as shown in the books of this office, but the statement does not include the cost of instruments supplied to the observatories by the Indian Meteorological Department, nor the cost of stationery supplied to the central office, nor the cost of printing the meteorological returns in the Gazette or otherwise, or of the forms required in the Meteorological Office, by the Bengal Secretariat Press.

ALEXANDER PEDLER, F.C.S.,

METEOROLOGICAL OFFICE, BENGAL;
The 15th June 1885.

*Offg. Meteorological Reporter to the
Government of Bengal.*

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 23th July 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERLAND DIV.	1 Burdwan, July 25 '85	0.74	Weather—too dry for the season. Want of rain delays transplanting in some places; prospects otherwise good. Price of rice 12 to 14½ seers per rupee. Health good.
	Culina ...	0.98	
	Cutwa ...	0.81	
	Raneegunge ...	2.4	
	2 Bankoora, " 25	1.40	Weather—hot and cloudy with occasional light showers. Transplanting of <i>amun</i> going on briskly, and prospects are improving, though more rain is wanted in many places. Price of rice stationary. Public health fair.
	Bishenpur ...	0.93	
SUNDERLAND DIV.	3 Beerbhoom, " 25	1.39	Weather—sultry with occasional showers. Transplanting going on on low lands. Rain urgently wanted in many places. No material change in prices. Cholera still prevalent in the Sudder sub-division.
	Rampore Hat ...	0.78	
	4 Midnapore, " 25	1.96	Weather—generally reasonable. Prospects good, though more rain is wanted in places. Public health fair, but a few cases of cholera and small-pox still reported.
	5 Hooghly, " 25	1.61	Weather—seasonable. Transplanting of rice is going on well, but more rain is wanted in Jehanabad. Other crops are doing well. Public health good.
	Jehanabad ...	0.63	
	Serampore ...	1.43	
PRESIDENCY DIV.	Howrah, " 25	1.05	Weather—hot and cloudy. Crops all look very well, but more rain is wanted, particularly in the Sudder sub-division. There is a good deal of fever about.
	Oolooberiah ...	2.80	
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, July 25 '85	Weather—hot with light showers. Prospects of early crops are good, but transplanting of <i>amun</i> has been retarded in some places for want of sufficient rain. Public health generally good.
	7 Nuddes,	Return not received.
	8 Khoolna, " 25	3.18	Weather—generally cloudy and rainy. Transplanting of <i>amun</i> continues. State and prospects of standing crops favourable. Public health fairly good.
	9 Jessore, " 25	1.83	Weather—seasonable. Harvesting of <i>aus</i> paddy going on in the Magoora and Narail sub-divisions. Prospects of both <i>aus</i> and <i>amun</i> paddy continue favourable. More rain wanted for transplanting of <i>amun</i> in the Sudder sub-division. Health good.
	Jhenida ...	0.71	
	Magoora ...	5.31	
RAJSHAHY DIV.	Narail ...	0.09	
	Bongong ...	1.6	
	10 Moorsheabad, " 25	2.65	Weather—hot; rainfall scanty. Prospects of <i>aus</i> crop tolerably good, but transplanting of <i>amun</i> is being seriously delayed by the scantiness of the rainfall. A few cases of cholera reported from Berhampore town and vicinity, otherwise public health good. Price of rice from 12 to 13½ seers per rupee.
	Lalbag ...	0.79	
	Kandi ...	1.66	
	Jungipore ...	Nil	
RAJSHAHY DIV.	11 Dinagepore, July 24 '85	1.37	Moderate rain throughout the district. State and prospects of crops very good. Average price of rice 13½ seers per rupee. Some cholera in the southern thanas.
	12 Rajshahye, " 25	1.89	Weather—hot with occasional showers. Harvesting of <i>til</i> nearly completed. Prospects of <i>aus</i> and <i>amun</i> paddy and of sugarcane fair. Jute generally stunted and backward. Public health fair. Earthquake of 14th instant was felt severely throughout the district, especially in the Nattore sub-division, and caused much loss of life. Many brick buildings were also damaged. Since 14th several slight shocks of earthquake have been felt.
	Nattore ...	1.40	
	Nowgong ...	3.12	
	13 Rangpore, " 25	1.21	Weather—hot with occasional rain and trembling of earth commencing from the severe earthquake of the 14th. Transplanting of <i>amun</i> , and harvesting of <i>aus</i> going on vigorously. Prospects of sugarcane, ginger, &c., promising. Thirteen cases of cholera reported from Jaldhaka and Dinia, of which 11 resulted fatally. Fever and bowel-complaints are on the increase.
	Nilphamari ...	1.19	
RAJSHAHY DIV.	Kurigram ...	0.08	
	Gaibanda ...	0.39	
	14 Bogra, " 25	1.17	Weather—seasonable; occasional showers. Another shock of earthquake was felt at 8-30 P.M. on the 24th. Prospects of <i>aus</i> very good. Sowing of <i>amun</i> going on. More rain required.
	15 Pubna, " 25	1.02	Weather—cloudy with occasional showers of rain. Crops flourishing.
	Serajgunge ...	1.99	
	16 Dajjesing, " 25	7.75	Weather—wet and warm. State and prospects of crops good.
RAJSHAHY DIV.	17 Julpigoree, " 25	3.17	Alternate rain and sunshine. Prospects of all crops favourable. Good rain during week with intervals of sunshine has greatly benefited tea. Cattle-disease bad in Alipur tehsil. A few cases of cholera in places.

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>conold</i> Eastern Districts.			
Dacca Division.	18 Dacca, July 25 '85	1.44	Weather—seasonable. Cutting of <i>aus</i> paddy and jute going on. <i>Aus</i> paddy and sugarcane thriving. Rapid rise of water has injured the <i>aus</i> crop in Manickgunge. Prospects of crops and public health generally good.
	Manickgunge ...	1.68	
	Munshigunge ...	2.89	
	Naraingunge ...	3.21	
	19 Furruckpore, " 25 "	2.0	Weather—cloudy with occasional showers. Prospects of rice and sugarcane crops good; <i>aus</i> is being reaped. General health good.
	Goalundo ...	2.74	
	Madaripore ...	3.23	Weather—seasonable. Harvesting of <i>aus</i> paddy has commenced. Cultivation of <i>aman</i> not yet finished. General health good.
	20 Backergunge, " 23 "	3.57	
	21 Mymensingh, " 24 "	1.29	Weather—seasonable. State and prospects of crops good. Public health fair.
	Jamalpur ...	2.42	
	Kishoregunge ...	2.07	
	Attia ...	5.14	
	Netrokona ...	1.20	
Chittagong Divn.	22 Chittagong, July 28 '85	5.68	Weather—seasonable. Cultivation and sowing in progress. <i>Aus</i> paddy being harvested. Prospects generally fair. Prices stationary. Cholera continues.
	23 Nonkholly, " 24 "	2.90	Weather—cloudy; rain at intervals; southerly wind. Prospects of crops good. Reaping of <i>aus</i> crop going on. One death from cholera during the week in the Fenny sub-division.
	Fenny ...	4.17	
	24 Tipperah, " 23 "	1.90	Weather—cool with constant showers. Transplanting of <i>aman</i> seedlings proceeding briskly; the crop looks very promising. <i>Aus</i> rice is being harvested and will give a good return. The accounts of jute are not so favourable; the crop this year will be short in quantity and quality. Public health good, except in portions of the head-quarters sub-division, which have been affected by cholera and cattle-pox.
	Brahmanbareah ...	1.16	
	Chandpore ...	0.90	
	25 Chittagong Hill, " 21 "	1.36	Weather—cloudy and occasionally rainy. More rain wanted for ploughing. <i>Joom</i> crops doing well. Prospects of sugarcane and <i>aus</i> paddy good.
	Tracts. Hill Tipperah, " 22 "	0.78	Weather—hot, more rain wanted. Prospects of <i>satya</i> paddy, <i>til</i> -oilseeds and <i>joom</i> crops fair. <i>Aman</i> paddy is being sown. No more cholera in Agartala. Public health good.
BEHAR.			
Patna Divn.	26 Patna, July 25 '85	1.51	Weather—hot and cloudy. Sugarcane and <i>bhadoi</i> sowings doing well. Transplanting of <i>murwa</i> and paddy seedlings commenced in places. A few cases of cholera reported from Barh, otherwise public health good.
	Dinapore ...	1.30	
	Barh ...	4.20	
	27 Gya, " 25 "	3.30	Weather—cloudy, and rain almost daily; 3 inches fell on the 23rd. All crops are in excellent condition. Paddy seedlings are coming up, but are not yet ready for transplanting. Prices do not compare unfavourably with those for the same period of last year. Public health fair.
	28 Shahabad, " 25 "	3.01	
	Buxar ...	2.18	Weather—seasonable. Sugarcane doing well. Ploughing and sowing progressing, but more rain wanted in Sasseram. Cholera reported from the Buxar sub-division.
	Bhabbhua ...	4.60	
	Sasseram ...	0.57	Weather—occasionally cloudy and sometimes close. <i>Bhadoi</i> crops look very promising except where damaged by floods. Transplanting of paddy and <i>murwa</i> is in progress. Prices almost stationary. Cholera still prevails in the Madhubani town.
	29 Durbhanga, " 25 "	2.10	
	Tajpur ...	3.55	Weather—strong sun with smart showers. Prospects of all crops good. Fever and cholera common, but not in an epidemic form.
	30 Mozufferpore, " 25 "	1.27	
	Hajipur ...	0.92	Weather—favourable for the crops; alternate showers and sunshine. Weeding operations in progress. <i>Bhadoi</i> crops coming on well. Paddy seedlings being transplanted in low <i>churs</i> . Manufacture of indigo progressing. Outbreak of cholera, more or less severe, in several thanas; otherwise public health good.
	Patna ...	0.02	
	31 Saran, " 25 "	0.83	
	Sewan ...	0.54	
Bhagalpur Divn.	32 Champaran, " 25 "	0.48	Weather—cloudy with easterly wind. Sunshine now required. Prospects of <i>bhadoi</i> and <i>aghani</i> crops favourable. Prices stationary. A few cases of cholera reported.
	33 Monghyr, July 25 '85	0.86	
	Begusarai ...	4.53	Weather—hot and sultry. Prospects continue good, but more rain is needed for <i>aghani</i> . Prices steady. Cholera prevailing at Jamalpur and other places.
	Jamui ...	2.40	
	34 Bhagalpur, " 25 "	0.41	Prospects favourable. Heavy rain is required for transplanting paddy. Prices stationary. Public health good.
	Suopole ...	0.30	
	Mudohpurah ...	0.43	
	Banka ...	2.17	
	35 Purneah, " 25 "	1.63	Weather—fine. <i>Bhadoi</i> crops good. Rain required for <i>aghani</i> . No really heavy rain has yet fallen. Floods in the Ganges high. Health fair.
	Kisengunge ...	1.71	
	36 Arrah ...	3.25	Weather—occasionally cloudy and rainy. <i>Bhadoi</i> paddy has been damaged to some extent by flood in the middle and south west of the district (English-bazar, Kaliachak, Shingunge and Manikchak). It is reported that in the English-bazar thana <i>bhadoi</i> rice has been also injured by insects. Coarse rice is selling at from 12 seers 2 chittacks to 16½ seers per rupee. Public health fair. Cholera at Shahpur is abating.
	Maidah ...	2.43	
	Chanchal ...	0.48	Weather—rainy in the first part of the week, then showery with breaks and clear sky. Transplanting of paddy is backward in Godda and Pakur, but is well advanced in Deoghur. <i>Bhadoi</i> crops fair. Cholera of a bad type reported from Deoghur and west of Dumka.
	37 Southal Pergas, " 25 "	2.62	
	Deoghur ...	3.56	
	Godda ...	2.37	
	hajnahal ...	5.12	
	Jamtara ...	1.60	
	Lakur ...	0.25	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttaek. July 24 '85	1.53	Weather—cloudy; light rain incessantly. <i>Beali</i> and <i>sarad</i> rice crops growing well. Common rice is selling at from 13½ to 15 seers per rupee in the town, and 18 to 22 seers in the interior. Public health generally good. Sporadic cases of cholera reported from all sides.
	39 Pooree, " 23 " Khoorda ...	0.44 3.91	Weather—hot and occasionally cloudy. Rivers have again risen and low lands are flooded. Puddling and transplanting going on. Weeding of early rice has begun. Common rice is selling at an average of 18 seers 6 chittacks per rupee in the Sudder sub-division, and 20 seers 5 chittacks in the Khoorda sub-division. Cholera prevalent in the town and along the pilgrim routes, but decreasing with the departure of the pilgrims.
	40 Balasore " 24 "	2.49	Weather—seasonable. Prospects of all crops favourable. Agricultural operations going on actively. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh. July 24 '85	3.46	Weather—seasonable. Abundant rain reported from all stations. Transplanting of <i>murwa</i> going on. Paddy fields being sown. Cholera reported from Hazaribagh, Chatra, Bo. odor, and Tandwa; otherwise general health good. Prices steady.
42	Lohardugga. " 25 "	3.55	Weather—seasonable. Good showers of rain during the week. Crops doing well. Prices stationary. Cholera reported from Mundar police station, and small-pox from Palamow, otherwise public health good.
43	Singbhoom. " 24 "	4.01	Plentiful rain throughout the week. Prospects of crops excellent everywhere. Prices easy. A few cases of cholera reported from Khursawan.
44	Manbhoom, " 25 " Govindpore ...	1.25 1.07	Weather—seasonable. Transplanting of <i>amra</i> going on. All crops doing well. Prospects so far favourable. Cholera abating.

Published for general information.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 27th July 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 24TH OF JULY 1885.

On the last day of the previous week an exceedingly feeble barometric depression had formed over the Sunderbuns, and its centre was a little distance to the south-east of Calcutta. During that day and the following night the small storm moved in a westerly direction, growing more feeble in its advance, and it was of such slight intensity that on the Saturday it had almost disappeared as a decided barometric depression, though it still existed in the west of South-West Bengal, and the tendency towards cyclonic circulation of winds round it was distinctly noticeable. On Sunday, the 19th, pressure which had been previously falling generally in Bengal continued to fall at the south-western stations, while it increased elsewhere, so that the area of low pressure which existed in this locality as the last indication of the small storm was intensified, and West and South-West Bengal formed a distinct area of low pressure on this day. The winds blowing at the western stations in Bengal on the 19th were distinctly abnormal, and they were undoubtedly influenced by the area of low pressure just noticed. On this day also the reports received from the coast stations of the Bay of Bengal showed clearly that a rather strong advance of the monsoon current was taking place over the Bay. On Saturday and Sunday the rainfall over the greater part of Bengal was light, and in many districts rather local, but with the stronger advance of the Bay of Bengal monsoon current, rainfall became heavier and more general on Monday and Tuesday, the 20th and 21st. On the latter date the whole of the Province was influenced by the Bay of Bengal current alone, but on Wednesday a westerly current, due of course to the Bombay branch of the monsoon, commenced to set in at the western stations, and by the interaction of the opposing wind currents, brought moderate to heavy rain over considerable parts of Behar. The oscillations of the barometer during this period in Bengal were extremely and abnormally large, and as the result of a rapid fall of pressure at the head of the Bay, a small barometric depression or cyclonic storm was formed a short distance from the land, and on Thursday, the 23rd, at 10 A.M., its centre was a short distance to the south-east of Saugor Island. The winds, round the small depression were distinctly cyclonic in direction, but light and feeble in force, and during that day and night the depression moved in a westerly direction, and crossed the coast of Orissa apparently near Balasore, and on Friday morning the small atmospheric whirl was to the west of Balasore, so far as could be judged by the wind directions, though the lowest barometric pressure was still reported from Saugor Island. This storm was exceedingly feeble, and it brought up only moderate amounts of rain. It will thus be seen that ordinary monsoon conditions have prevailed in all districts throughout the week, and conditions have been favourable for a moderate and general rainfall over the Province, though by the partial interaction of the Bay of Bengal monsoon current with the Bombay current over parts of Behar, that district has received a rainfall rather in excess of the normal while all other districts have received rainfalls distinctly below the normal.

Pressure was during the previous week distinctly in excess of the normal, the average excess being equal to 0.03". These conditions have been completely reversed, and the average pressure over the whole Province for the present week is 0.41" below the normal. This diminished pressure is fairly evenly distributed, and for the meteorological districts the extremes are a defect of about 0.05" in South-West Bengal to a defect of 0.03" in Chutia Nagpur. The variations of pressure during the week may be shortly summed up by saying that on Friday, the 18th instant, the barometer was falling in all districts except Chutia Nagpur, the fall being largest in those districts affected by the small storm described above. On the following day pressure again fell in South-West Bengal, though it increased in other districts, and on the 20th an extremely rapid increase of pressure commenced, which lasted for two days. The increase was so rapid that in certain cases, as at Chittagong on the 20th, pressure increased by practically two-tenths of an inch within twenty-four hours, which is an extremely rapid rise for a Bengal station. The rapid increase was followed by an equally rapid fall, which culminated in the formation of the second barometric depression noticed above; and on Thursday, the 23rd, at 10 A.M., the pressure registered at Saugor Island was only 29.49". On the last day of the week the barometric changes to a great extent followed the westward advance of the barometric depression.

Temperature changes have generally been small and variable. In the previous week temperature was very nearly normal, and the average over the whole Province showed a defect of only 0.6°. During the present week the temperature over the whole Province has become ever more nearly normal, and the variation is now only 0.30° in excess of the normal.

The variations of the wind systems have to a certain extent been followed previously. For the first two days winds in the south-western districts were influenced by the first small depression, while in other districts they were almost normal. With the disappearance of the depression a stronger monsoon current advanced over the Province, which lasted for two days, the 20th and 21st. Westerly winds began to make themselves felt in the western districts on the 22nd, and they were still perceptible on the 23rd, and during the formation of the second small cyclonic storm, but with the advance of this depression the westerly winds were driven back, and at the close of the week the Bay of Bengal current was blowing over the whole of Bengal, giving rise to winds of nearly normal direction and force at all stations.

The rainfall for the week has been very general, though in most cases lighter than usual. On Saturday, the 18th, when only a comparatively feeble monsoon current was blowing, general rain in moderate quantities was falling in East and North Bengal, and light and rather local rainfall in South-West Bengal, South Behar and Chutia Nagpur, though in Orissa and North Behar rainfall was very scanty. On Sunday, the 19th, the area of moderate rainfall extended to Orissa and South Behar, while to a certain extent it ceased in East Bengal, fairly general rain in light to moderate amounts being reported from other districts. With the setting in of the stronger monsoon current on the 20th and 21st, rainfall became general in all districts on these days, except in North Behar. On Wednesday, the 22nd, the monsoon current began to slacken, and rainfall became less general and lighter, but this was followed on the 23rd by the heavier rainfall in the western districts, due to the advance of the westerly winds as before described, and on this day rainfall was general and heavy in South and parts of North Behar, Chutia Nagpur and Orissa, while in the Eastern and northern districts rainfall was almost absent. The same conditions, though becoming more feeble, also obtained on the 24th. During the week some rather heavy local falls of rain have been reported, thus at Tajpore in the Durbhunga district on the 18th, 3.55 inches of rain were reported, and at the same station on the 23rd, 4.65 inches were recorded. At Bhubhuah in the Shahabad district on the 19th instant 4.65 inches were reported, and at Rajmehal on the 22nd 3.41 inches, while Barrh (Patna district) and Gya, on the 23rd, both registered more than 3 inches of rain.

Taking up the average rainfall of the respective meteorological divisions, the only district which shows a rainfall in excess of the normal is South Behar, which has received 2.61 inches against the normal 2.38 inches, which is equal to 10 per cent. in excess of the normal. Chutia Nagpur has received 2.78 inches against the normal 3.03 inches, which is 8 per cent. in defect. East Bengal has received 2.60 inches against the normal 3.47 inches or 25 per cent. in defect. The average fall in South-West Bengal has been 1.61 inches against the usual amount of 2.40 inches, which gives 33 per cent. in defect. North Behar reports an average fall of 1.59 inches against the normal 2.60 inches, which is 39 per cent. in defect. North Bengal has received 2.00 inches instead of 3.12 inches, which is 36 per cent. in defect; and finally Orissa has received 2.4 inches against the normal fall of 2.86 inches or 15 per cent. in defect. Summing up these results, it may therefore be said that the average rainfall of the whole Province for the week has been 21 per cent. in defect of the normal. The number of rainy days for the whole Province for the week has averaged 4.3, while the normal number of rainy days during the same period is 4.2. There is therefore comparatively little difference in the actual number of rainy days from the normal, and it would appear that the cause of the deficient rainfall is lightness of the rain showers rather than absence of rainy days.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 24th of July 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The average fall of the corresponding period for 24 years, S. G.'s Office	...	inches.	2.69
The total fall from 1st January to 25th July 1885	...	inches.	26.88
The average fall of the corresponding period for 24 years, S. G.'s Office	...	inches.	81.38

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Bockley's anemograph.

The mouth of the rain-gauge is one foot above the ground

o overcast, d drizzling rain, p passing temporary showers, t thunder, g gloomy.

ALEXANDER PEDLER.

The total fall of rain from 19th to 25th July 1885 1.88

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 27th July 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

DURING the week ending 11th July 1885, the returns of the principal Municipalities in Bengal furnished the following particulars:—

1. That births and deaths were registered in these Municipalities at the rates, respectively of 21·6 and 34·9 per 1,000 of population, against 23·0 and 29·6 per 1,000, respectively, during the preceding week ending 4th July, showing a small decrease in the registration of births and a considerable increase in that of deaths

2. That the highest birth and death-rates were returned by the following Municipalities:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	41·6	Puri	216·1
Gya	37·5	Mozufferpore	63·2
Chupra	32·2	Chittagong	61·1
Rauaghat	30·0	Monghyr	49·7
				Durbhanga	48·8
				Burdwan	47·3
				Patna	41·1
				Gya	38·9
				Purneah	38·0
				Bhagulpore	30·8
				Suburbs of Calcutta	30·6

3. That the mean rates at which the population of the Municipalities died from the principal diseases exhibited in the table appended to this memoranda were as indicated below:—

				Ratio per mille during the weeks ending—	
				11th July 1885.	4th July 1885.
Cholera	8·4	5·1
Small-pox	·3	·8
Fever	11·6	10·7
Bowel-complaints	5·0	3·6
Injury	·6	·6
Other causes	8·8	8·8

The above figures denote chiefly that, in comparison with the preceding week, there occurred during the week under notice considerably enhanced mortality from cholera, and a small increase of fatal results from fever and bowel-complaints.

4. That of the abovementioned death-causes, while the casualties from small-pox and violence were nowhere noticeably large, the rest of the diseases proved most fatal to life in the following Municipalities:—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	169·9	Purneah	31·1	Puri	14·7	Puri	23·1
Mozufferpore	30·4	Burdwan	22·9	Patna	11·0	Bhagulpore	16·3
Durbhanga	22·8	Chittagong	21·1			Patna	14·6
Chittagong	18·8	Mozufferpore	20·7			Gya	14·3
Monghyr	15·4						
Burdwan	9·1						
Gya	6·1						
Suburbs of Calcutta	4·7						

It will be observed that, in comparison with the preceding week, cholera prevailed with added severity in the Puri and Mozufferpore towns, notably in the former, and that it exhibited an equal death-rate in the Durbhanga Municipality.

5. • That the death-rates under the heads of *Sex*, *Class* and *Age* stand as indicated below:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	34·8	Christians	...	17·4	Under 1 year	...	301·8
Females	...	35·1	Hindus	...	37·1	1 and under 5 years	...	46·4
Ratio of male deaths to every 100 female deaths	...	112	Mahomedans	...	30·6	5 " 10 "	...	24·2
						10 " 15 "	...	24·9
						15 " 20 "	...	26·6
						20 " 30 "	...	25·5
						30 " 40 "	...	27·5
						40 " 50 "	...	24·0
						50 " 60 "	...	23·5
						60 years and upwards	...	49·1

The 27th July 1885.

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

LONDON INDO-COLONIAL EXHIBITION OF 1886.

REVENUE DEPARTMENT—MISCELLANEOUS (F.)

Calcutta, the 31st July 1885.

RESOLUTION.

READ—

- A letter from the Government of India, Revenue and Agricultural Department, No. 1069Ex.—79-1, dated 23rd June 1885, regarding the representation of the mercantile community of Bengal in the Imperial Court of Economic Products at the Indo-Colonial Exhibition of 1886.

Read again—

- Resolution by the Government of India, Revenue and Agricultural Department, dated the 18th March 1885, defining the share to be taken by India in the London Exhibition of 1886, and publishing certain information for the guidance of intending exhibitors.
- Letter from the Government of India, Revenue and Agricultural Department, No. 26Ex.—1—24, dated 18th March 1885, forwarding with remarks copy of a despatch from the Secretary of State, determining the functions of the Government of India and the Provincial Governments respectively in connection with the London Exhibition.
- Letter from the Government of India, Revenue and Agricultural Department, No. 29Ex.—1—29, dated 23rd March 1885, forwarding a sketch plan of the Exhibition, and communicating certain instructions.
- The Resolution of this Government, dated the 2nd May 1885, appointing a committee to take charge of the Bengal Court of artware, ornamental fabrics and decorative work at the Indo-Colonial Exhibition.

In the original instructions laid down by the Government of India and the Secretary of State for the guidance of Provincial Governments in preparing for the Indo-Colonial Exhibition of 1886, the operations of the Government of Bengal were limited to the equipment of the Provincial Court

illustrating the artware, ornamental fabrics, and decorative work of the Lower Provinces. The representation of economic and commercial products was confined to the Imperial Courts, and the work of collecting exhibits under this head was expressly reserved by the Government of India to be dealt with by the Department of Revenue and Agriculture. The object in view was to make the collection "national and not provincial" in character, and to prevent the unnecessary re-duplication of exhibits which it was apprehended might take place if the several provinces worked concurrently on the same lines. It resulted from this allotment of duties that in forming a Provincial Committee for the equipment of the Bengal Court, the subjects of artware and ornamental articles had alone to be considered, and there appeared to be no necessity for appointing members representing the larger commercial interests to be illustrated in the Imperial Courts. It was felt, moreover, that where the scope of the operations was so limited, the Government could not fairly ask gentlemen fully occupied with commercial business to devote a substantial portion of their time to assisting the Government in forming a collection of only the artistic products of Bengal.

The Government of India have now expressed their wish to enlist the co-operation of the mercantile community of Bengal in the preparations for the Indo-Colonial Exhibition, in order to ensure an adequate representation of trade samples of the most important commodities and manufactures of the Lower Provinces. With this object they propose to devote a large portion of the Imperial Court to commercial products and manufactures, so arranged as to give an opportunity for a separate and distinct display of each. It is intended to relegate to the walls of the Imperial Court the collection of economic samples already prepared on a scientific system of grouping by the Revenue and Agricultural Department, and to allot for the exhibition of commercial products arranged on a purely mercantile system as large an area as possible in the centre of the Court. The entire arrangement of the programme for the indigo and jute sections for the whole of India is also to be entrusted to the representatives of those industries in Bengal, and the Government of India intend to direct the authorities in other provinces to transmit their jute and indigo samples to Calcutta to be dealt with by the Committee to be formed for this purpose. It has been left to the Bengal Government to determine in what manner the mercantile community should be invited to co-operate in the work. On a careful consideration of the subject, and after consulting persons qualified to advise in the matter, it seems to the Lieutenant-Governor that the object in view can be most conveniently and effectively attained by adding to the Committee already appointed to deal with the artware of Bengal, members representing the wider commercial interests which now have to be considered. The Lieutenant-Governor has, therefore, determined to reconstitute the existing Committee in a manner calculated to carry out the objects now in view; and he has secured the assent of several members of some of the leading firms of Calcutta, who are specially conversant with the chief raw products and manufactured articles of Bengal and whose practical experience will be of the greatest value, to co-operate with the Committee in determining in what way the trade of these provinces can best be illustrated at the London Exhibition. The Committee thus formed, including those gentlemen who have consented to join it for the purpose of dealing more particularly with the commercial exhibits, will consist of the following members:—

Mr. H. A. Cokerell, C.S.I., President.
 " D. Cruickshank, Vice-President.
 " H. Berger.
 Surgeon-Major, D. D. Cunningham.
 Mr. M. Finucane.
 " J. Henderson.
 " C. R. Hills.
 " J. J. J. Keswick.
 Dr. G. King.
 Mr. H. H. Locke.
 " R. Lyall.

Hon'ble A. P. MacDonnell.
 Mr. J. D. Maxwell.
 Hon'ble R. Miller.
 Mr. J. Murdoch.
 " A. Pedler.
 " T. Ralli.
 " H. H. Risley.
 " A. Simson.
 Hon'ble Colonel S. T. Trevor.
 Lieutenant-Colonel Waterhouse.
 Mr. M. Jackson, Member and Secretary.

The duties of the Committee are indicated in greater detail in the papers quoted in the preamble to this resolution, copies of which will be sent to all the members. It is believed that the gentlemen who have now joined the Committee, besides determining the best methods of representing the commercial products of Bengal, will be able to render most valuable assistance in dealing with the artwares and other decorative articles the collection of which is now in progress. And the Lieutenant-Governor hopes that the labours of the enlarged Committee now constituted may result in the formation of a collection of exhibits worthily representing both the vast economic interests and the decorative products of Bengal.

ORDER.—Ordered that copies of the Resolution be forwarded to all Departments of Government, all Commissioners, and the Members of the Committee, for information and guidance.

Also that it be published in the *Calcutta* and *Vernacular Gazettes*.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

THE PALANDU EMIGRANTS

Dated Calcutta, the 4th August 1885.

From—H. H. RISLEY, Esq., Offg. Secy. to the Govt. of Bengal, General Dept.,
To—The Secretary, Indian Tea Association.

I AM directed by the Lieutenant-Governor to acknowledge the receipt of your letter of the 8th May 1885, and to thank your Association for the enquiries which they have made with reference to the case of the family of five persons, residents of the Hazaribagh district, who were recruited in October 1883, by Mr. J. Binning of Palandu near Ranchi for service on the gardens of the Khobong Tea Co., Limited, in Assam, and who, on their arrival, were with 67 others, 37 of whom had been recruited by the same agent, rejected as unfit for work. The circumstances of the return of these five emigrants to their home are narrated in Mr. MacDonnell's letter No. 71, dated the 16th March 1885, to your address, and in your letter above quoted. The Lieutenant-Governor desires me to make the following remarks on the three points which are stated in paragraph 3 of your letter as arising on consideration of all the facts of the case.

2. With regard to the conduct of Mr. Binning in the matter, it appears to the Lieutenant-Governor to be impossible to doubt that this gentleman, who is believed to have had long experience as a recruiting agent, must have been well aware that the intending emigrants were incapable of doing regular work on any garden in Assam. Before despatching them from Ranchi, it was his duty, both in the interests of his employers and as a matter of humanity, to ascertain by personal examination that the intending emigrants were physically fit to undertake the journey to Assam and to labour on a tea garden. Mr. Binning is therefore primarily responsible for the hardship and suffering which the emigrants appear to have undergone, and the fact that the Khobong Tea Company's Agent at Ranigunge, about 120 miles by road from the place where the emigrants were recruited, forwarded them to Assam, does not relieve him from the charge of inhumanity towards the emigrants, and of culpable carelessness in carrying out his agreement to supply labourers for the Company.

3. In respect of the provision made for the coolies on their return journey, reasonable care seems to have been taken by the Manager of the garden and his agents as far as Ranigunge. From this point, however, the arrangements were less satisfactory, and the allegation that the chuprasi who had charge of them during this part of the journey omitted to provide for their wants remains unanswered. For this neglect, however, the Ranigunge agent, and not the Manager of the garden, appears to have been responsible. In the matter of the rejection of the emigrants, the Lieutenant-Governor is not prepared to say that the action of the Manager was otherwise than fair. He observes, however, that the contract under which they emigrated appears to have been executed only by the coolies, and he thinks that in future cases the agent in the recruiting districts should be empowered to sign such contracts on behalf of the employer in Assam.

4. With regard to the medical examination of free, or unregistered, emigrants, the Lieutenant-Governor is satisfied, after consulting the officers of the recruiting districts, that in the existing state of the Emigration law, it is hardly possible to arrange for the medical examination of free emigrants; and he is not prepared at present to recommend an amendment of the law in this direction. Sir Rivers Thompson agrees with the Association in thinking that this is a matter in which employers may in most cases be trusted to look after their own interests, and he would suggest, for the consideration of the Tea Association, that the object in view might be attained with little trouble and expense if local recruiters or agents were instructed by their employers to refer doubtful cases to the Civil Surgeon for examination.

5. The Lieutenant-Governor is willing to believe that the abuses connected with the introduction of a system of free emigration have been recently checked in great measure by the action of the Indian Tea Association, and that the case which has formed the immediate subject of this correspondence is an exceptional one. The great responsibilities of employers in the matter

of labour recruiting need, however, to be borne in mind. Great power is vested in the agents employed for the purposes of recruiting, and if their proceedings are not controlled by a strong hand by those who employ them, irregularities and malpractices will prevail. Government could not tolerate the recurrence of such evils in the matter of improper recruitment as have been revealed in the case of these emigrants from Palandu, and would have to interfere by legislation to prevent agents who had abused their powers from exercising their profession. At present the remedy is in the hands of Managers, and it seems scarcely possible that employers would continue to retain in their service an agent who should subject them to so much inconvenience and expense as have been suffered by the Khobong Company at the hands of Mr. Binning.

6. I am to add that the correspondence will be published in the *Calcutta Gazette*, and will be brought to the notice of the Government of India, in connection with a report on the working of the Inland Emigration Act during the last three years, which has been called for by the Secretary of State.

No. 71, dated Calcutta, the 16th March 1885.

From—A. P. MacDONNELL, Esq., Secy. to the Govt. of Bengal, General Dept.,
To—The Secretary to the Indian Tea Association.

THE following case has been reported to Government as illustrating the evils of the free labour system:—

Mr. J. Binning, of Palandu, one of the largest recruiters of free labour, recruited in October last, through the agency of Arkattis, a family of five persons from the Hazareebagh district, and they entered into engagements with him to serve in Assam for three years. On their arrival at the garden, they were, with 67 others, rejected as unfit for work, and ordered to return to their homes. Out of these 72 persons, 37 were persons who had been recruited by Mr. Binning and were being returned to him. The family of five persons above alluded to received from the chuprasi in charge a very poor meal daily from the garden to Dhubri; and from Dhubri to Kaunia, a distance of 24 miles, they got no food at all, as the chuprasi who was provided with expenses for the road missed them. Between Kaunia and Raneegunge they had no cause for complaint, but from Raneegunge they were accompanied by a chuprasi who, though provided with sufficient funds, gave them only one very poor meal a day. The whole party were, in consequence, so reduced in strength as to be unfit to travel, and one of them, a woman, was found alone on the roadside by the Deputy Commissioner of Manbhoom in a condition of weakness which necessitated her removal in a cart. The whole party, consisting of five persons, had to be sent to the charitable dispensary at Purulia. It is not known what became of 32 other persons who were also returning to Mr. Binning with the above five persons, but they are said to have deserted at various places on the road owing to ill-treatment by the chuprasi in charge, who was dismissed by his employer, Mr. Caw. Mr. Binning, though called on to pay the expense incurred in the treatment of the above coolies in the Purulia charitable dispensary, refused, alleging that his responsibility ceased as soon as he had despatched them to Assam.

2. The circumstances of this case are such as, in Sir Rivers Thompson's opinion, deserve the attention of the Tea Association. It is true that the contract entered into with the labourers (of which a copy is enclosed) was an ordinary civil contract, and did not provide for the payment of compensation in the event of any of the coolies being rejected as unfit for labour on arrival in Assam. But the case was one for the exercise of more humanity than was displayed by Mr. Binning, and it was also one, in which the provision made for these coolies by the employer who dismissed them, as well as the cause of their dismissal, might well be enquired into. The case also suggests the desirability of having free emigrants, if collected by garden agency, examined medically in the district of recruitment. It may be that there are difficulties in the way of such examination; but if the difficulties be not insurmountable, the adoption of some such plan might be advantageous both in the interests of the employer and the coolie. The Lieutenant-Governor would therefore feel obliged if your Association would take the matter into consideration and favour him with their views as to the practicability of such medical examination of intending emigrants previous to their departure from their native district.

Dated Calcutta, the 8th May 1885.

From—G. M. BARTON, Esq., Secretary, Indian Tea Association,

To—The Secretary to the Government of Bengal, General Department.

IN continuation of my letter of the 31st March, I have now the honour, by direction of the General Committee of this Association, to reply to your communication dated the 16th idem, with reference to a case that had been reported to the Government of Bengal as illustrating the evils of the free labour system.

2. The case refers more especially to a family of five persons who were recruited by Mr. J. Binning, of Palandu, for service on the gardens of the Khobong Tea Company, Limited, in Assam, and who, on their arrival at their destination, were, with 67 others, rejected as unfit for work, and ordered to return to their homes. Out of these 72 persons, 37 had been recruited by Mr. Binning, and were being returned to him. It is stated that the family of five persons above alluded to received from the chuprasi in charge a very poor meal daily from the garden to Dhubri, and that from Dhubri to Kaunia they got no food at all, as the chuprasi, who was provided with expenses for the road, missed them. Between Kaunia and Ranigunge they had no cause of complaint, but from Ranigunge they received only one very poor meal a day, and the consequence was that they were so reduced in strength that, on arrival at Purulia, the whole party had to be sent to the charitable dispensary. The 32 other persons who were also returning to Mr. Binning are said to have deserted at various places on the road, owing to ill-treatment by the chuprasi in charge, who has been dismissed by his employer, Mr. Caw of Ranigunge. It is also stated that Mr. Binning, though called on to pay the expense incurred in the treatment of the five coolies in the Purulia Charitable Dispensary, refused to do so on the ground that his responsibility ceased as soon as he had despatched them to Assam.

3. The case seems to embrace the following points regarding which His Honour the Lieutenant-Governor would be glad to have some explanation or expression of opinion on the part of this Association :—

- (1.) The want of humanity displayed by Mr. Binning.
- (2.) The provision made for these coolies by the employer who dismissed them, as well as the cause of their dismissal.
- (3.) The desirability of having free emigrants, if collected by garden agency, examined medically in the district of recruitment.

4. With reference to the first point, as to the want of humanity displayed by Mr. Binning, that gentleman has referred the Association to a letter written by him on the 1st March 1884 to the Deputy Commissioner of Lohardugga in reply to one requesting him to forward Rs. 20 for the maintenance and sending home of certain coolies in the Purulia hospital. In that letter he stated that some time previous he had written to the Deputy Commissioner of Purulia on the subject, and had informed him that the proper person to defray any expense of the kind was Mr. Alexander Caw, forwarding agent at Ranigunge. He went on to say in the same letter that the coolies in question had been passed and forwarded to Assam by Mr. Caw as agent for Mr. H. G. Lindsay of the Khobong Tea Company, Limited, after which his (Mr. Binning's) responsibility ceased. It would appear that this amount was subsequently paid by the Calcutta Agents of the Khobong Tea Company, Limited.

5. As to the second point, which refers to the provision made for these return coolies by the employer who dismissed them, as well as to the cause of their dismissal, I am directed by the General Committee to state that, from information supplied by the Manager of the Khobong Tea Company, Limited, they learn that the rejected coolies walked in in three days from the garden to Debrughar, and for this journey they had, before they left, a week's supply of food given them. They stayed one day in Debrughar and proceeded by steamer to Dhubri, the garden agent in the former place providing them with an ample allowance to convey them to Dhubri. At Dhubri the forwarding agent had orders to have the coolies carefully sent on to Ranigunge, and from there they were despatched to Ranchi by Mr. Caw.

6. With regard to the statement that the family of five persons received from the chuprasi in charge a very poor meal daily from the garden to Dhubri, the Manager reports that there was no such person as a chuprasi in charge

of the food. The coolies had all their own cooking utensils supplied to them, and to each one individually was given his or her ration of salt, oil, rice, dahl, spices, &c., as can be proved by numerous witnesses whom the Manager could produce. He naturally feels aggrieved that any such statement should have been made to Government; and should further enquiry be made, he will be happy to supply all the information in his power.

7. As to the cause of the dismissal of the coolies, the Manager explains that it was not a fact that, on being considered unfit to labour in Assam, they were ordered to return to their homes. They were never asked to work, but were allowed to see what the other coolies did, and were told that they could not do the like. They were then asked if they would wish to return to their country at once, and those who liked to remain were told to stand on one side, but, with very few exceptions, all clamoured to be sent back. There was no hurry in the matter, and some of the planters in the neighbourhood and the medical man were asked to look at the coolies. One and all pronounced them unfit, and said the Manager was right in sending them back, his own feeling being that common humanity would have induced any one under the same circumstances to act as he did.

8. With regard to the third point raised in the letter under reply, which refers to the desirability of having free emigrants, if collected by garden agency, examined medically in the district of recruitment, I am desired by the General Committee to say that it seems to them that any compulsory medical examination is unnecessary, as free emigrants would probably be deterred from proceeding to the tea districts if they knew that they were subject to the delay and inconvenience of such examination. Any employer entering into an engagement for a supply of free emigrants can stipulate that they shall be medically examined before being despatched to the tea districts, and if an employer should be badly served by his local agents in respect to the quality of the coolies despatched, he is not likely to employ the same agent again: so the evil is one that must cure itself. I am further to point out that the case under notice is a most exceptional one, and the expense attending it will probably be sufficient to prevent a recurrence.

9. In conclusion, I am desired by the General Committee to say that they regret the unavoidable delay which has occurred in replying to your letter, but they will be happy to give publicity to its contents, and to their reply, as they believe such a course would tend to put a stop to any further cause of complaints of a like nature.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 1st August 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERMAN DIV.	1 Burdwan, Aug. 1 '85	0.42	Weather—hot and dry. Prospects generally good. Rain wanted in some places. Price of rice 11½ to 14½ seers per rupee. Health good, except in the Sudder sub-division.
	Culina ...	2.68	
	Cutwa ...	2.63	
	Raneegunge ...	3.2	Weather—warm with alternations of rain and sunshine. Transplanting of <i>aman</i> is in rapid progress. Prospects good. Price of rice shows a tendency to fall. Public health good.
	2 Bankoora, " 1 "	3.21	
	Bishenpur ...	3.13	Weather—hot and cloudy; occasional showers. Cultivation of rice crop impeded by scantiness of rain in many localities. Heavy rain wanted. Prices somewhat higher. Cholera diminished.
	3 Beerbhoom, " 1 "	1.82	
	Rainpore Hat ...	3.01	Weather—seasonable. Transplanting of rice going on everywhere. Indigo manufacture begun. Prospects generally good. Public health fair.
	4 Midnapore, " 1 "	4.09	
	5 Hooghly, " 1 "	5.04	Weather—seasonable. Good rain all over the district. Transplanting of rice well forward and prospects good. Prices steady. Public health good for the time of year.
	Seraimpore ...	4.77	
	Jehannabad ...	7.31	Weather—hot and cloudy. All crops are doing well. Transplanting of seedling rice is being pushed on in Oolooberiah. In the Sudder, rainfall is deficient for the season, only a little over three inches having fallen in three weeks. Fever prevalent.
	Howrah, " 1 "	1.45	
	Oolooberiah ...	2.29	
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, Aug. 1 '85	2.11	Weather—hot with occasional rain. Prospects of early crops continue good. Transplanting of <i>aman</i> going on, but more rain required. Public health good.
	7 Nuddea, " 1 "	1.32	Weather—cloudy and rainy. <i>Aus</i> paddy doing well. Transplanting of <i>aman</i> paddy going on. More rain wanted, especially at Sudder.
	Kushtia ...	4.43	
	Meherpur ...	2.69	
	Chandanga ...	2.01	Weather—very wet and damp at Khoolna and Bagerhat; less wet at Satkhira. Transplanting of <i>aman</i> rice going on favourably. <i>Aus</i> rice coming into flower. Public health good. A few cases of small-pox in Satkhira.
	8 Khoolna, " 1 "	1.85	
	Ranaghat ...	2.69	
	9 Jessore, " 1 "	6.99	Weather—rainy and seasonable; perhaps a little too continuous rain in the Sudder. Prospects of paddy crops continue favourable. Harvesting of <i>aus</i> paddy going on in some parts of the district; good outturn expected. Rain of the week has done good to the transplanting of <i>aman</i> paddy. Cases of fever here and there.
	Jhenida ...	4.58	
	Magoora ...	2.17	
	Narail ...	1.26	Weather—seasonable. Prospects of <i>aus</i> crop favourable. More rain wanted for transplanting of <i>aman</i> rice in the Lalbagh and Jungipore sub-divisions. Price of rice 11 to 13½ seers per rupee. Sporadic cases of cholera reported; fever prevalent in the Lalbagh sub-division.
	10 Bongong ...	3.87	
	Moorshedabad, " 1 "	3.32	
RAJSHAHY DIV.	Lalbagh ...	4.43	Weather—hot and seasonable. Rain all over the district. State and prospects of sugarcane and jute good. <i>Bhadou</i> crops thriving well and are in ear in places; a good yield expected. Cultivation of winter crop going on very well. Rice selling at from 11 to 17 seers per rupee.
	Kandi ...	6.21	
	Jungipore ...	3.11	
	11 Dinagepore, July 31 '85	6.34	Weather—hot, cloudy and rainy. <i>Til</i> harvest still in progress; a fair outturn expected. Cutting of jute has commenced. Prospects of <i>aus</i> and <i>aman</i> paddy and of sugarcane fair, though some <i>aus</i> on low lands in Natore has been damaged by floods. Transplanting of <i>aman</i> paddy still continues. Cholera reported from the Nowgong sub-division and from Tanore, and fever general. Prices very slightly improved.
	12 Rajshahye, Aug. 1 "	4.77	
	Natore ...	3.90	
	Nowgong ...	4.28	Weather—hot with occasional rain. Harvesting of <i>aus</i> not yet finished. Transplanting of <i>aman</i> going on. Prospects of other crops good. Eighteen cases of cholera reported from Dumla, of which 16 proved fatal. Fever and bowel-complaints still prevalent.
	13 Nowgong, " 1 "	3.27	
	Nilphamari ...	1.31	
	Gaibanda ...	3.11	7.20 inches of rain fell during the night of the 27th ultimo. Weather hot and steamy. Three shocks of earthquake on the 28th. Prospects of crops good. Public health fair. A few cases of fever reported.
	14 Bogra, " 1 "	3.20	
	Kurigram ...	9.40	
	15 Pubna, " 1 "	2.25	Weather—cloudy and hot. Rivers rising considerably so as to endanger crops on low lands, which are otherwise of excellent promise. Public health good.
	Serajgunge ...	5.40	
	16 Darjeeling, " 1 "	10.52	
	17 Culpigoree, " 1 "	9.07	Weather—very wet. Some damage done by the rain and earthquake of the 29th ultimo; but all prospects most favourable. Heavy rain with alternating heat. Weather very favourable for all crops. <i>Haimanti</i> paddy cultivation progressing everywhere. <i>Bhadou</i> harvest still going on; about 8 annas cut. Public health fair.

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—conold			
<i>Eastern Districts.</i>			
Dacca Division	18 Dacca, Aug. 1 '85	1.18	Weather—cool. Harvesting of jute and <i>aus</i> paddy going on; <i>amun</i> and other paddy in the field doing well. Public health good.
	Manickgunge ...	5.21	
	Munshigunge ...	2.10	
	Naraingunge ...	1.72	Weather—cloudy with occasional showers. Prospects of <i>amun</i> and jute crops good. <i>Aus</i> being cut. Public health good.
	19 Furrcepore, " 1	2.43	
	Goulundo ...	4.16	
	Madaripore ...	2.58	Weather—seasonable. Harvesting of <i>aus</i> paddy has commenced. Cultivation of <i>amun</i> not yet finished. General health good.
	20 Backergunge, July 30	2.28	
	Mymensingh, July 31	2.0	
	Jamalpur ...	1.89	Weather—seasonable. State and prospects of crops good. Public health good.
CHITTAGONG DIV.	Kishoregunge ...	3.99	
	Attia ...	7.06	
	Netrokona ...	2.50	Weather—seasonable. Cultivation and sowing in progress. Early rice being harvested. Prospects generally fair. Prices stationary. Cholera still lingers; public health otherwise good.
	22 Chittagong, Aug. 3 '85	4.19	
	23 Noakholly, July 31	2.49	
	Fenny ...	10.54	Weather—seasonable; wind southerly. <i>Aus</i> crop excellent; reaping continues. <i>Amun</i> plants in some places attacked by insect, which heavy showers, it is said, will cause to disappear. Public health pretty good.
	24 Tipperah, " 30	5.98	
	Prahmanbareah ...	3.16	
	Chandapore ...	5.40	Weather—heavy and almost unintermittent rain, with brief intervals of sunshine. Early rice harvest nearly over; results above the average. Transplanting of late rice seedlings also completed. Other crops promise well. More damage has been done to crops on low sites by the heavy rainfall. Jute prospects poor. Cholera reported from thana Chandagram, otherwise public health good.
	25 Chittagong Hill, " 28	4.18	
	Tracts.		
BEHAR.	Hill Tipperah, " 29	3.98	Weather—rainy and cloudy during the latter part of the week. A good deal more rain wanted. Early <i>joom</i> paddy crop is ripening in some parts of the district. Prospects of cotton and sugarcane good. Ploughing in low lands still continues.
	26 Patna, Aug. 1 '85	3.77	Weather—hot. <i>Bhadai</i> crops are growing well, except on deorah lands where rise of water has injured them to certain extent. Paddy seedlings are being transplanted. Cholera reported from the Barh and Behar sub-divisions.
	27 Gya, " 1	2.25	Weather—generally cloudy during the week. All reports speak well of the crops. Transplanting of paddy is commencing. A good deal of cholera still prevails in the Nowada sub-division. Very slight changes in prices.
	28 Shuhabad, " 1	4.83	Weather—cloudy with east wind prevailing. Prospects of <i>bhadai</i> crops promising. Transplanting of paddy has commenced.
	29 Buxar, " 1	0.84	Weather—close and sometimes cloudy. Prospects of <i>bhadai</i> crops very favourable. Transplanting of rice still going on. Prices continue stationary. Cholera still reported from the Madhubani sub-division.
	30 Durbhanga, " 1	4.72	Condition of all crops is good. Some of the early millets are ripening. Cholera prevalent, and some small-pox reported.
	31 Mozufferpore, " 1	0.35	Weather—fair with occasional clouds and rain. <i>Bhadai</i> crops promising well. Manufacture of indigo in progress. Transplanting of paddy seedlings going on. Cases of cholera and fever still reported. Public health otherwise good.
	Hajipur ...	2.79	
	Chitamarhi ...	2.46	
	32 Sarun, " 1	2.17	Weather—hot and cloudy. <i>Bhadai</i> and <i>aghani</i> crops look promising. Transplanting of paddy is in progress. Prices stationary. Cholera prevails in Motihari town, in the jail, and also in the interior.
	Sewan ...	3.39	
	Gopalgunge ...	1.17	
BHAUGUR Division	33 Champaran, " 1	0.88	Weather—hot and sultry. Prospects of <i>bhadai</i> crops continue good. Rainfall in the Janui sub-division has been of much benefit to the <i>aghani</i> . Prices rising slightly. Cholera reported in many places.
	34 Monghyr, Aug. 1 '85	0.46	
	Begusarai ...	3.65	
	Jaqui ...	4.40	Prospects favourable. Transplanting of paddy going on. Some of the <i>bhadai</i> crops north of the Ganges have been submerged; elsewhere they are good. Prices stationary. A few cases of cholera reported in all parts, more in the south than elsewhere.
	35 Bhagulpore, " 1	5.20	
	Soopole ...	2.24	
	Mudehporah ...	0.98	Weather—fine. State and prospects of crops very good. More rain required. Health fair. Ganges high.
	36 Purneah, " 1	3.03	
	Kissengunge ...	4.49	
	Airareah ...	3.40	Weather—hot, cloudy and clear alternately. In the west, south-west, and south the high land <i>bhadai</i> , though backward, is doing well. Possibly 2 annas of the low land crop has been lost by the rising of the river; the rest is a fine crop and is being harvested. If all goes well an average crop all round may be expected. Caterpillars have attacked the indigo and mulberry in some villages. The crops in other parts promise well. Prices of coarse rice vary from 11 to 16½ annas per rupee. Twenty-six cases of cholera reported in thana English-bazar.
	37 Maldah, " 1	1.37	
	Chanchal ...	2.73	
BHAUGUR Division	38 Sonthal Pergah, " 1	5.97	Over three inches of rain fell on each of two days in the week at Deoghur alternate rain and sun-line. Prospects of <i>aghani</i> paddy excellent. Indian-corn may suffer from the heavy rain.
	Deoghur ...	10.80	
	Godda ...	3.74	
	Kajmehal ...	2.90	
	Jamtara ...	5.49	
	Patour ...	3.67	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, July 31 '85	4.31	Weather—partly cloudy and partly sunny. <i>Beali</i> and <i>sarad</i> growing well. Common rice selling at from 16 to 20 seers per rupee in the interior and 12 seers in the town. Cholera prevalent owing to crowd of return pilgrims from Car festival; otherwise public health good.
	39 Pooree, " 30 "	0.23	Weather—cloudy with occasional drizzling. Puddling and transplanting going on. Low lands are still flooded. Early rice and other miscellaneous crops of the season thriving. Common rice is selling at an average of 18 seers 11 chittacks per rupee in the Sudder sub-division, and 19 seers 7 chittacks in the Khoorla sub-division. Cholera prevalent in the district, but decreasing.
	Khoorda " ...	3.87	
	40 Balasore " 31 "	3.18	Weather—occasionally rainy and cloudy. Agricultural prospects good. Weeding and puddling operations going on actively. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	41 Hazaribaga, July 31 '85	1.34	Weather—seasonable. Good rain reported from all parts of the district. Agricultural operations in progress, and all crops promise well. Cholera reported from several police stations. Prices steady.
	42 Lohardugga, Aug. 1 "	6.15	Weather—seasonable. Heavy rain during the early part of the week. There is now a break. Weather very favourable for agricultural operations, and all crops doing well. A severe outbreak of cholera in thana Mandar, but there are signs of its abating. Cattle-disease reported from thana Karra. Prices stationary.
	43 Singhbhum, July 31 "	1.83	Seasonable rain. Crops doing well everywhere. Prices steady. A few cases of cholera and fever reported from the interior.
	44 Manbhum, Aug. 1 "	4.17	Weather—cloudy, cool, and wet. Sufficient rain everywhere. Prospects of all crops good so far. Public health has improved.
	Govindpore " ...	2.85

The total fall of rain from 26th July to 1st August 1885 Inches.
The average fall of the corresponding period for 24 years, S. G.'s Office ... 2.00
The total fall from 1st January to 1st August 1885 4.04
The average fall of the corresponding period for 24 years, S. G.'s Office ... 28.88
35.42

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

Calcutta, the 4th August 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 31st OF JULY 1885.

On the last day of the previous week a small area of low pressure, which had been generated to the south-east of Calcutta, had moved in a westerly direction, and on the Friday its centre was to the west of Midnapur. The small storm again advanced in a westerly direction, and before 10 A.M. of Sunday, the 26th, it apparently filled up and disappeared. The storm was, however, an exceedingly feeble one, and in its advance it brought up light to moderate rain, and at the same time another advance of humid southerly winds took place over Bengal. These conditions continued on Sunday, the 26th, but at this time a rapid fall of the barometer took place, which was particularly noticeable over parts of South-West Bengal, and this was followed by the formation on Tuesday, the 28th, of a distinct barometric depression over South-West Bengal, and at 10 A.M. of this day its centre was to the south-east of Calcutta. On the Wednesday the depression had advanced in a westerly or north-westerly direction, and at 10 A.M. on this day its centre was near Midnapur. It continued its advance on the Thursday through Chutia Nagpur, and afterwards travelled through the North-West Provinces, and according to the telegraphic reports received from the India Meteorological office, the storm was still in existence on Saturday, the 1st of August, near Agra. This storm, it will be seen, had a longer life history than has been the case with most of the small storms which have been generated at the head of the Bay during the present monsoon, and it would therefore appear to have been of rather greater intensity. It brought up to many stations in its path very heavy rain, and with its advance a light monsoon set in, which, however, seemed to fall off rapidly in intensity at the close of the week, and on the Friday very small amounts of rain only were being received over the Province, and the distribution of the showers was very local. Conditions have thus again been, during the greater part of the week, favourable for giving a good and general rainfall over the greater part of the Province, and the result has been that in most districts moderate rain has been general on from four to five days out of the seven.

Pressure during the previous week had been fairly steadily below the normal, the average defect over the whole Province being about 0.044", while the defect was fairly evenly distributed, the variations being from a deficient pressure of 0.05" in South-West Bengal to a defect of 0.03" in Chutia Nagpur. During the present week the defect has become somewhat smaller, and it averages for the whole of the Province only 0.033", while the variations in the meteorological districts are from a defect of 0.018" in Orissa to a defect of 0.043" in Behar. The variations of pressure from day to day have been of the usual oscillatory character, and the barometer was rising generally on the 25th, falling from the 26th to the 28th, increasing again on the 29th and 30th, while on the 31st the barometric variations were a little irregular. The most rapid changes of pressure have of course taken place in connection with the formation and advance of the depression noticed above, but even in this case, as the depression was rather a feeble one, the fall of the barometer near its centre was very slight.

Temperature was during the previous week very nearly normal, and the average variation over the whole Province from the normal only amounted to an excess of 0.3°. During the present week the temperature has again been almost normal, and the average temperature scarcely differs from the normal temperature by more than a tenth of a degree, the actual being lower than the normal temperature. From day to day the changes of temperature have been particularly small, and of the usual character dependent to a great extent on the presence or absence of rainfall and of cloud. The greatest variations from normal temperature have been in Orissa, which shows a defect of 1°, but in most other districts the variations from normal have been much smaller than this.

The wind directions were at the commencement of the week very nearly normal in all districts. At the inland stations wind velocities were generally small, but at the head of the Bay rather strong winds were blowing. On Sunday, the 26th, there was a slight advance of the Bombay branch of the monsoon current, and westerly winds were reported from the western districts. There was thus a little interaction between the opposing wind currents, and this was at once accompanied by the precipitation of rather heavy and general rain in South Behar and Chutia Nagpur. On the following day the westerly current strengthened, and it extended even into North and East Bengal, and this was accompanied by heavy rain in these districts, and over South-West Bengal and parts of North Behar. These conditions continued fairly constant on Tuesday the 28th, and on this day the small barometric depression had formed to the south-east of Calcutta, when rainfall was general and rather heavy in all districts. The wind directions were then of course directly influenced by the area of low pressure, and with its advance the cyclonic circulation of winds also advanced and brought up with it a rather light monsoon current from the Bay of Bengal. Finally, with the movement of the depression into the North-West Provinces a rather strong westerly current set in over the western parts of Bengal and rainfall became very light on the Friday.

The rainfall for the week was on the whole most general from Sunday, the 26th, up to Wednesday, the 29th, and the rainfall at the commencement and end of the week was decidedly lighter in almost all instances than that which fell in the middle of the week. Thus on the Saturday the rainfall was light, and though fairly general in most districts;

North Behar was almost rainless. On Sunday general and heavy rainfall was received in South Behar and Chutia Nagpur, and rainfall was general in all districts except perhaps Orissa. On Monday and Tuesday rainfall was general and rather heavy in all districts, but on the Wednesday, though rainfall was still general, the amounts commenced to diminish and the falls were in most instances light. On the following two days the area of rainfall gradually diminished, and the amounts decreased except in North Bengal, where the heavy falls continued somewhat longer than in other districts.

Compared with the normal rainfall, the amounts received during the week have been distinctly in excess in North Bengal, Chutia Nagpur and South-West Bengal. South Behar has received a normal fall, while North Behar and East Bengal have received falls slightly below the normal, and Orissa a fall decidedly below the normal. Thus North Bengal has received 3.95 inches against the normal 3.05 inches, which is equal to 29 per cent in excess. Chutia Nagpur has received an average fall of 3.60 inches against the normal 3.49 inches, or 3 per cent. in excess. Over South-West Bengal the average fall has been 3.42 inches against the normal 3.38 inches, which is 1 per cent. in excess. South Behar has registered 3.42 inches against 3.43 inches, a fall which is practically normal. North Behar reports an average of 2.38 inches against the normal 2.93 inches, which is equal to a defect of 18 per cent. In Orissa the amount registered has been 1.91 inches against the normal 3.00 inches, or a defect of 36 per cent., while in East Bengal the average fall has been 4.35 inches against the normal fall of 5.04 inches, which is therefore a defect of 13 per cent. Taking the whole Province into consideration, the rainfall has not been far removed for the normal, and the variation is only 5 per cent. in defect. The average number of rainy days over the Province has been 4.5 against the normal average of 4.5, and thus, while probably the number of rain showers have been equal to the normal, the showers have been lighter than usual.

The distribution of the rainfall in the respective meteorological divisions has generally been fairly equal, but though the above numbers represent pretty well the average distribution of the rainfall, there are certain districts where the amounts received call for more particular notice. Thus in South-West Bengal the general fall is in excess of the normal, though the district of Burdwan has only received 1.75 inches against the normal amount 3.35 inches, while at Burdwan itself the fall was only 0.60 inch for the week. The Ranigunge district has only received 2.01 inches against the normal 3.81 inches. Kishnaghur has only received 1.32 inches, though the normal fall of the district is 3 inches. Again in Chutia Nagpur, though the average fall is distinctly in excess of the normal, Chyebassa only reports 1.57 inches against a normal fall of 4.12 inches. The following stations also show rather exceptionally small amounts of rain during the week as compared with the amounts received at the neighbouring stations:—Narail in the Jessore district, Dacca, Maldah, Bagdogra in the Rungpore district, Gondwara in North Behar, Maddapur in the Bhagulpore district, Mozufferpore, Motihari, Bagaha, and Burhurwa in the Chumparun district, Buxar, Dehree, Monghyr and Hazaribagh.

On the other hand some exceptionally heavy falls have been reported from various stations: thus Kotalpore in the Bankoora district on the 28th reported 5.78 inches, Jehanabad in the Hooghly district on the same day 4.5 inches; on the 26th Arrah reported 5.05 inches; on the 27th Jessore reported 5.26 inches, Fenny 6.42 inches and Julpigoree 6.64 inches; on the 28th Manikgunge received 4.51 inches and Atcah in the Mymensingh district 6.47 inches, while on the 29th Contai received 4.57 inches, and Saugor Island 4.21 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 31st of July 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month†.		Since 18th May 1885.

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 3rd August 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE following is a summary of the principal facts connected with the vital statistics of the principal Municipalities in Bengal for the week ending 18th July 1885, exhibited in the annexed table—

1. That births and deaths were recorded in these Municipalities in the proportions, respectively, of 21·2 and 39·0 per 1,000 of population as opposed to 21·6 and 34·9 per 1,000, respectively, during the preceding week ending 11th July, indicating a considerable advance in the registration of deaths.

2. That the undermentioned Municipalities returned the highest proportions of births and deaths :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Gya	45·0	Puri	440·6
Patna	33·4	Gya	59·5
Durbhanga	29·9	Mozufferpore	57·2
				Burdwan	47·3
				Durbhanga	42·6
				Chittagong	42·2
				Patna	40·5
				Suburbs of Calcutta	37·6
				Monghyr	36·2
				Purneah	34·6

3. That, as compared with the results of the preceding week, the mortality from cholera had increased considerably ; the death-rate from fever exhibits no variation ; and there were no marked differences in fatal results from the rest of the diseases :—

				Ratio per mille during the weeks ending—		
				18th July 1885.	11th July 1885.	
Cholera	12·5	8·4	
Small-pox	·2	·3	
Fever	11·6	11·6	
Bowel-complaints	4·7	5·0	
Injury	·3	·6	
Other causes	9·6	8·8	

4. That the highest death-rates from cholera, fever and the diseases classed under the head of "Other causes" were returned from the following Municipalities, the rest of the maladies not proving noticeably fatal anywhere :—

Cholera.			Fever.			Other causes.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Puri	...	402·8	Burdwan	...	24·4	Gya	...	26·0
Mozufferpore	...	25·5	Mozufferpore	...	21·9	Puri	...	25·2
Chittagong	...	23·6				Midnapore	...	15·5
Monghyr	...	14·5				Kishnaghur	...	13·2
Durbhanga	...	13·4				Suburbs of Calcutta	...	12·8
Burdwan	...	10·7				Dacca	...	11·6
Gya	...	10·3				Patna	...	10·7
Suburbs of Calcutta	...	5·2						

It will be noticed that cholera prevailed with considerably abated severity in the Mozufferpore Municipality in comparison with its incidence during the preceding week, but that, in the Puri Municipality, it progressed in virulence yielding a death-rate of as much as 402·8 per 1,000 of population. Most of this mortality is believed to have occurred among the pilgrims during the *Fath Jatra* festival.

5. That the mortality of the week, classified under the heads of *Sex*, *Class* and *Age*, stands as follows :—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	37·3	Christians	...	52·1	Under 1 year	...	301·8
Females	...	40·9	Hindus	...	44·0	1 and under 5 years	...	53·1
Ratio of male deaths to every 100 female deaths	...	103	Mahomedans	...	27·5	5 " 10 "	...	25·6
						10 " 15 "	...	19·4
						15 " 20 "	...	30·8
						20 " 30 "	...	25·3
						30 " 40 "	...	30·5
						40 " 50 "	...	36·6
						50 " 60 "	...	33·8
						60 years and upwards	...	57·5

The 3rd August 1885.

B. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

PUBLIC WORKS DEPARTMENT, IRRIGATION BRANCH, BENGAL.

LONDON EXHIBITION OF 1886.

THE following letter from the Government of India is published for general information.

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

The 11th August 1885.

* Circular No. 2Ex—84—5, dated Simla, the 8th July 1885.

From—C. S. BAYLEY, Esq., c.s., Under-Secretary to the Government of India,
Revenue and Agricultural Department,

To—The Secretary to the Government of Bengal.

I AM directed to state for the information of His Honor the Lieutenant-Governor that a proposal has been made by Messrs. H. S. King & Co., the Official Agents for the Indian and Colonial Exhibition, that they should be allowed to open in the Exhibition a separate "Cigar and Tobacco Room," in which can be exhibited samples of raw and manufactured tobacco from all parts of India. Messrs. H. S. King & Co. offer to place one or more attendants in charge of this room, who will furnish sample cigars, price lists of the different makers, weights of the cigars for computation of duty, &c. They will also take charge of consignments from the makers and will take orders, either in large or small quantities. They undertake to represent all the manufacturers impartially and without preference, and to make the increased popularity and greater demand for Indian cigars their special object.

2. This proposal, which commended itself to the Royal Commissioners, has been referred by them for the consideration of the Government of India, by whom it has been formally approved. Small samples of Indian cigars and tobacco, both raw and manufactured, will be exhibited in the Imperial Courts of the Exhibition, but the space there assigned to them is necessarily limited, while it is impossible for the Government to give any facilities for trying them, such as will be offered in the proposed Tobacco Room. Under these circumstances, it has been decided that the Government exhibit of tobacco should be kept within limits sufficient to represent this important

5. Messrs. H. S. King & Co. lay much stress on the desirability of consignments of tobacco and cigars being sent to them, if possible, some months before the Exhibition opens. Indian cigars, they observe, nearly always arrive from India so wet as to be unfit for early use, and if passed through the Custom House at once before they have had time to dry, the duty payable is greatly enhanced by the superfluous damp which they contain.

4. Messrs. H. S. King & Co.'s proposals seem to the Government of India well calculated to forward the interests of the Indian Tobacco Trade, and I am therefore directed to request that as much publicity may be given to it as possible.

It is suggested that this letter should be published in the official *Gazettes*, both English and Vernacular, and should be distributed to the principal vernacular newspapers and generally to all persons interested in the Tobacco Trade.

REPORT ON THE WORKING OF THE LICENSED WAREHOUSE AND FIRE BRIGADE ACT IN THE HOWRAH MUNICIPALITY DURING THE YEAR 1884-85.

The following report is published for general information.

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

I HAVE the honour to report on the working of the Licensed Warehouse and Fire Brigade Act in this municipality for the official year ending 31st March 1885.

1. There were 27 jute warehouses licensed during the year, showing an increase of four, owing to two of the owners of warehouses not having taken out their licenses the previous year. They have, however, done so this year, paying up in full for both the years.

2. A classified list of warehouses which were licensed during the year is given in Appendix I. There were no new warehouses established during the year.

3. The total receipts or income amounted to Rs. 6,000 from license fees only, as there were no cases of prosecution, and hence no fines. However, there has been an increase of income as compared with the previous year of Rs. 287-10-3, apart from the sum of Rs. 400 paid in for the previous year. The following is the expenditure in the inspection of warehouses during the year:—

	Rs.
1 Inspector	600
Contingencies	2
Total	602

4. The fire brigade establishment was entirely under the control of the Deputy Commissioner of Police, Calcutta, during the year under review. He is making proper arrangements for establishing a steam fire engine on this side of the river. The only fire worth recording was at the Howrah Hydraulic Press, belonging to Messrs. Haworth & Co., which took several days to completely subdue, and the estimated loss is about Rs. 60,000. A statement showing the particulars of fires is given in Appendix II. This was received from the officer in charge of the fire brigade here. The following is the expenditure incurred during the year, irrespective of the amount expended by the Deputy Commissioner of Police:—

	Rs.	A.	P.
Fire brigade establishment	599	0	0
Feed and keep of horses	26	8	9
Repairs to engines	200	0	0
Contingencies	21	4	3
Eighty per cent. paid to the Commissioner of Police ...	4,280	0	0
On account of purchase of fire engine from London ...	3,630	0	0
Total	8,756	13	0

W. H. GRIMLEY,

Chairman of the Howrah Municipality.

The 10th June 1885.

APPENDIX I.

Jute Warehouses for which Licenses were granted during the year 1884-85.

Register No.	NAMES OF OWNERS, &c.	Locality.	Description of premises.	Annual valuation.	Amount of fee realized.	Date of payment.	REMARKS.
				Rs.	Rs.		
1	Owners ... Foolchand Mackun Lall ... Occupiers ... Ditto ... Licensees ... Ditto ...	129, Old Ghosery Road	2 Corrugated iron sheds.	480	50	7th April 1884.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 8th August 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Aug. 8 '85	1.95	Weather—seasonable. Prospects of crops good. Price of rice 11½ to 14½ seers per rupee. Health generally good.
	Cutwa	1.68	
	Culna	0.46	Weather—hot with occasional rain. Prospects of paddy and minor crops very favourable. Indigo is being manufactured, and a good outturn is expected. Health good.
	Raneegunge	2.47	
	2 Bankoora, " 8	7.04	Weather—cloudy and showery. Progress of transplanting improved owing to a better fall of rain. Cultivation still backward in many places. Prices slightly higher. Cholera continues.
	Bishenpur	7.66	
	3 Beerbhoom, " 8	2.06	Weather—cloudy with constant heavy showers. Very heavy rain all over the district. Crops injured by excess of water in Ghatal, elsewhere doing well. Public health fair.
	Rampore Hat	1.41	
	4 Midnapore, " 8	4.57	Weather—seasonable. The rainfall of the week has been too heavy in some places, but prospects are generally good. Prices steady. Public health fair.
	Ghatal	13.46	
PRESIDENCY DIV.	Contai	11.69	Report not received.
	Tunlook	7.50	
	5 Hooghly, " 8	6.18	Weather—seasonable and hot. Prospects of early crops continue satisfactory. Transplanting of <i>amun</i> going on, but more rain required. Public health good.
	Jehanabad	11.71	
	Serampore	7.10	Weather—hot and cloudy. <i>Aus</i> crop is doing well. Transplanting of <i>amun</i> is going on. More rain wanted.
	Howrah, "	
	<i>Central Districts.</i>		Weather—cloudy and rather sultry, with rain almost every day. Prospects of <i>amun</i> and <i>aus</i> rice favourable. Public health good.
	6 24-Pergha, Aug. 8 '85	5.59	
	7 Nudda, " 8	1.43	Weather—rainy. Harvesting of <i>aus</i> paddy going on. It will yield a good outturn. Prospects of <i>amun</i> crop continue favourable. General health fair.
	Kuchtia	2.78	
RAJSHAHY DIV.	Meherpur	1.37	Weather—seasonable. Prospects of <i>amun</i> crop are now fairly good since more rain has fallen, but transplanting is still being delayed in the Jungipore sub-division from want of sufficient rain. Prospects of <i>aus</i> crop are favourable except on low lands which have been flooded by the Ganges. Sugarcane and mulberry good. Sporadic cholera reported from different quarters.
	Chusdanga	2.62	
	Ranaghat	2.37	Weather—seasonable and hot. Rain all over the district. State and prospects of jute, sugarcane and <i>shadoi</i> crops are good. <i>Shadoi</i> is being cut in places; a fair outturn is expected. Cultivation of late rice is going on well. Rice is selling at from 12 to 17 seers per rupee.
	8 Khoolna, " 8	2.99	
	9 Jessore, " 8	5.66	Weather—hot and showery. <i>Til</i> harvest completed; average outturn about 12 annas. Cutting of jute continues. Rivers have risen considerably during the week. Prospects of <i>aus</i> , <i>amun</i> , and sugarcane generally fair, though in some places in south floods and in others insects have injured <i>aus</i> . Transplanting of <i>amun</i> is still in progress. A few cases of cholera reported from Nowgong. A smart shock of earthquake was felt on the 3rd instant at about 9 P.M.
	Jhenida	2.16	
	Magoura	2.91	Weather—hot with occasional rain and earthquakes. Harvesting of <i>aus</i> and transplanting of <i>amun</i> still going on; other crops doing well. Cases of cholera reported from stations Dinla and Jaldhaka, and outpost Palashbari. Fever and bowel-complaints are prevalent.
	Narail	2.59	
	Bongong	1.84	Only showers have fallen. Weather tolerably cool. Earthquakes continue though less severe than before. Prospects of crops very good. Public health fair.
	10 Moorahadabad, " 8	2.32	
RAJSHAHY DIV.	Lalbagh	3.63	Weather—cloudy and rainy. Prospects of crops excellent. Some very low-lying paddy has been cut owing to the rise of the rivers. Fever reported at Serajgunge.
	Kaudi	1.17	
	Jungipore	1.23	Weather—very wet. State and prospects of crops good. August harvest of rice, maize millet, and potatoes in progress.
	11 Dinagore, Aug. 7 '85	2.13	
	12 Rajshahye, " 8	0.88	Fair rain during the week. Weather somewhat cooler. At Alipur a break having occurred more rain was wanted, but all crops well spoken of. In the Sudder crops are very good. Cattle-disease still very bad in Duara. Price of rice rising.
	Sattore	1.10	
	Nowgong	0.10	Weather—hot with occasional rain and earthquakes. Harvesting of <i>aus</i> and transplanting of <i>amun</i> still going on; other crops doing well. Cases of cholera reported from stations Dinla and Jaldhaka, and outpost Palashbari. Fever and bowel-complaints are prevalent.
	13 Rungpore, " 8	1.00	
	Gaibanda	1.73	Only showers have fallen. Weather tolerably cool. Earthquakes continue though less severe than before. Prospects of crops very good. Public health fair.
	Kurigram	0.20	
RAJSHAHY DIV.	Nilphamari	0.26	Weather—cloudy and rainy. Prospects of crops excellent. Some very low-lying paddy has been cut owing to the rise of the rivers. Fever reported at Serajgunge.
	14 Bogra, " 8	1.67	
	15 Pubna, " 8	1.96	Weather—very wet. State and prospects of crops good. August harvest of rice, maize millet, and potatoes in progress.
	Serajgunge	1.53	
RAJSHAHY DIV.	16 Darjeeling, " 8	6.50	Fair rain during the week. Weather somewhat cooler. At Alipur a break having occurred more rain was wanted, but all crops well spoken of. In the Sudder crops are very good. Cattle-disease still very bad in Duara. Price of rice rising.
	17 Jalpigoree, " 8	3.13	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>conold.</i>			
<i>Eastern Districts.</i>			
DACCA DIVISION.	18 Dacca, Aug. 8 '85	1.75	Weather—seasonable. <i>Aus</i> paddy and jute are being harvested. <i>Amun</i> and other paddy and sugarcane are doing well. Public health good.
	Manickgunge	5.04	
	Munshigunge	1.85	
	Naraingunge	1.51	
	19 Furreedpore, " 8 "	2.80	Weather—cloudy and rainy. Prospects of <i>amun</i> and jute crops continue good. <i>Aus</i> being reaped with fair outturn. Rivers rising. Public health good.
	Goalundo	1.17	
	Madaripore	4.54	
	20 Backergunge, Aug. 6 "	5.17	Weather—seasonable. Harvesting of <i>aus</i> crop has not yet been finished. Transplanting of <i>amun</i> going on. General health good. Frequent and heavy showers. Shocks of earthquake continue; the last on the 3rd instant at 9 P.M. was severe. <i>Aus</i> rice and jute are being cut. Crops generally excellent.
	21 Mymensingh, " 7 "	2.45	
	Jamulpur	1.29	
	Kishoregunge	1.35	
	Attia	3.26	
	Netrokona	0.86	
CHITTAGONG DIV.	22 Chittagong, " " "	" "	Report not received.
	23 Noakholly, " 7 "	5.54	Weather—cloudy and rainy. Harvesting of <i>aus</i> crop continues; outturn is expected to be very good. Transplanting of <i>amun</i> continues. The late showers have cleared off the insects reported last week. Two deaths from cholera in the Fenny sub-division during the week.
	Fenny	2.50	
	24 Tipperah, " 6 "	0.74	Weather—cool and cloudy with occasional showers. <i>Aus</i> harvest is nearly finished. Jute is now being cut; yield better than was anticipated from the appearance of the crop; it will probably not be far below the average. Price of rice is falling owing to the new <i>aus</i> coming into the market. Public health good, except in thana Chandagram, whence cholera is reported.
	Chandpore	4.60	
	25 Chittagong Hill Tracts, " 4 "	2.44	Occasional heavy showers of rain throughout the week. More rain wanted for cultivation of plough paddy. Early <i>joom</i> paddy is ripening. Cotton and sugarcane doing well. Fever very prevalent.
BEHAR.	Hill Tipperah, " 5 "	0.30	Weather—hot; cloudy with occasional drizzling. <i>Satya</i> paddy reaped. <i>Amun</i> still being sown. Prospects of <i>joom</i> crops fair. Public health good.
	PATNA DIV.		
	26 Patna, Aug. 8 '85	1.74	Weather—seasonable. <i>Bhadai</i> crops are promising well. Transplanting of paddy seedlings going on. Cholera still reported from the Barh and Behar sub-divisions.
	27 Gya, " 8 "	3.71	
	28 Shahabad, " 8 "	4.30	Rain on five days of the week. In thanas Nabinagar and Daudnagar of the Arrangabad sub-division more rain is wanted for the transplanting of rice. Elsewhere transplanting is proceeding satisfactorily. <i>Bhadai</i> crops doing very well. Fever, cholera, and small-pox are reported from some parts. Prices nearly stationary.
	Buxar	0.86	
	Sasaram	0.29	
	Bhabhua	0.68	Weather—seasonable. Prospects of <i>bhadai</i> excellent; weeding operations and transplanting of rice seedlings in progress; more rain wanted in the south and south-west of the district. Cholera reported from the Buxar sub-division.
	29 Durbhunga, " 8 "	1.41	
	30 Mozufferpore, " 8 "	1.66	Weather—cloudy. <i>Bhadai</i> crops are coming up very well. <i>Marwa</i> and <i>makai</i> just coming into ear. Indigo cutting has commenced. Prices stationary. Public health good.
	Hajipur	0.28	
	Sitamarhi	0.43	Weather—cloudy and showery. Crops making rapid growth. Transplanting of rice nearly completed. Cholera prevalent in most parts of the district.
	31 Saran, " 8 "	2.98	
	Sewan	2.49	
	Gopalgunge	3.42	Weather—fair with occasional clouds and rain. <i>Bhadai</i> crops promising well except on dearah land, where the rise of water has injured them to a certain extent. Manufacture of indigo in progress. Transplanting of paddy seedlings going on. Cases of cholera and fever still reported, otherwise public health good.
	32 Champaran, " 8 "	1.03	
	33 Monghyr, Aug. 8 '85	1.98	Weather—hot and cloudy. <i>Bhadai</i> and <i>aghani</i> crops look promising. Transplanting of paddy is in progress. Prices stationary. Cholera prevails in an epidemic form in Motihari town and jail, and some cases are reported from the interior.
	Beguserae	3.54	
	34 Bhagulpore, " 8 "	6.64	Weather—showery. Prospects of <i>bhadai</i> continue favourable. More rain is required in the Sudder sub-division for the rice crop. Cholera continues at Jannalpur and head-quarters. Prices steady. The sub-divisional officers all report that rain is much wanted for transplanting paddy; their reports, however, are up to the 5th and 6th only, and probably they have since then had heavy rain. Prospects good. Floods have done some, but not very extensive, damage. Cholera still prevalent in the south of the district. Prices stationary.
	Mudchpurah	0.24	
	Soopole	0.25	
	Banks	0.58	
	35 Purneah, " 8 "	1.77	Heavy showers. <i>Bhadai</i> good, but attacked by caterpillars in Kuliwa and Muni-hari. Health fair. Ganges very high, causing damages.
	Kissengunge	2.45	
	36 Maldah, " 8 "	1.67	Weather—first part of the week was fair with alternate rain and sunshine, latter part was cloudy and rainy. A portion of the <i>bhadai</i> on low lands already lost by flood. The river is rising again. Prospects of <i>haimanta</i> paddy good. Coarse rice is selling at 13 annas per rupee at Engishbazar.
	Chanchal	1.29	
	Shibgunge	0.79	
	Gazole	2.86	
	37 Southal Pergah, " 8 "	2.26	Weather—cloudy with occasional heavy showers. Prospects of rice crop everywhere excellent, but rain is too continuous for the <i>janera</i> crop, which is generally backward, and the area is considerably less than last year. Cholera very prevalent all over the district.
	Deoghur	9.67	
	Godda	0.49	
	Rajmehal	0.54	
	Pakour	0.88	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIVA.	38 Cuttack, Aug. 7 '85	1.40	Weather—cloudy with showers of rain occasionally. <i>Boali</i> and <i>sarad</i> crops doing well; former ripening in some places; latter requires more rain, particularly where there are no canals. Price of rice almost unchanged. Sporadic cholera reported; public health generally good.
	39 Pooree, " 6 "	2.05	Weather—cloudy with occasional average showers. Puddling, transplanting, and weeding of <i>sarad</i> rice going on. <i>Laghu sarad</i> suffering from a disease called <i>muli</i> . Miscellaneous crops doing well. Common rice is selling at an average of 17 seers 3 chittacks in the Sudder sub-division and 19 seers 8 chittacks per rupee in the Khoorda sub-division. Small-pox and the usual sporadic cholera prevail in the town of Pooree, and in the district.
	Khoorda " ...	3.13	
	40 Balasore "	Reported not received.
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Aug. 7 '85	2.66	Weather—seasonable. Ample rain everywhere except in thana Juggeshur. Crops generally promise well. Prices steady. Cholera still prevalent in various parts of the district.
42	Lohardugga, " 8 "	5.51	Weather—wet and cloudy; excessive rain during the week. A break in the weather would be beneficial. Transplanting of paddy continues. Prices stationary. Small-pox decreasing. Cholera on the increase.
43	Singbhoom, " 7 "	2.99	Plentiful rain everywhere. Prospects of all crops excellent. Prices easy. General health good.
44	Manbhoom, " 8 "	6.15	Weather—wet. More than sufficient rain has fallen. Prospects of crops continue good.
	Govindpore " ...	2.25	

Published for general information.

Ju:

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF JULY 1885.

THE month of July in Bengal is one of the most important of the whole year from a meteorological point of view, for it is the first complete month of the actual monsoon period. It is generally the case that the complete establishment of the two great branches of the monsoon current does not take place till quite the end of June or beginning of July, and usually the rainfall in the Lower Provinces in July is heavier than during any other month of the year. Another reason why the meteorology of July is important, is that the distribution of the rains in July generally gives a rough indication of the probable distribution of the rainfall during the whole of the monsoon period.

The circumstances and conditions of the establishment of the south-west monsoon have been dealt with in previous reports, and it has been pointed out that, while during June the rainfall in Bengal is practically almost entirely brought up by the Bay of Bengal monsoon current, at the end of this month, or commencement of July, the Bombay branch of the monsoon, blowing from the Indian Ocean and the Arabian Sea, advances slowly across Central India and the Central Provinces, and makes its influence felt in Bengal, and particularly in the western districts of the Province. In its forward progress the Bombay current meets the Bay of Bengal monsoon current, and the interaction between the two currents gives rise to ascensional motion, which, according to well known physical laws, causes condensation of the aqueous vapour in the form of rain. The Arabian Sea branch of the monsoon current therefore exercises a considerable influence on the rainfall in Behar, Chutia Nagpur and Bengal generally, during July.

The Bay of Bengal current, if it alone prevailed, as is the case to a certain extent in June, would undoubtedly deposit the greater part of its vapour as rain in the neighbourhood of the sea coast, and along the areas nearest to the hills in the east and north of the Province. The interaction between the two branches of the monsoon current is undoubtedly greatest in the western districts of the Province, and therefore tends to give heavier rainfall to Chutia Nagpur, South Behar and West Orissa, or to those parts of the Province which would receive the smallest amounts of rain from the direct action of the Bay of Bengal branch; that is, the combined effect of the two branches is to produce in normal years a fairly uniform rainfall over the whole Province. The amount of the interaction between the two branches of the monsoon current will depend on two things—first, on the relative strengths of the two currents; and second, on the position or direction in which the currents meet, for as the Bengal current is changed by the physical configuration of the country over which it is flowing from a south-westerly wind at the head of the Bay, first into a southerly, then into a south-easterly, and finally into an easterly current, it is evident that interaction with the westerly current will be more marked in Behar where the Bay of Bengal current is easterly, than it will be in Orissa where it is south-westerly. Thus in normal years the rainfall in the western parts of Behar and of Chutia Nagpur is practically entirely brought about by the interaction above described.

It must, however, be remembered that the south-west monsoon winds are by no means steady. They blow vigorously for a few days, giving more or less general rain, and then fall off in strength, when the rainfall becomes local. A fresh rush of winds then occurs followed by general rainfall with subsequent lulls as just described. It is during these periods of comparative calm, that conditions are favourable to the generation of small cyclonic storms, which in most cases are formed near the head of the Bay, though they also, but more rarely, may form over the land. With the advance of these cyclonic storms heavy rain generally occurs, and it depends to a great extent on the character of these small storms or atmospheric whirls, that is, whether they are of concentrated or of diffused nature, whether the rainfall which accompanies their advance falls only near the path of the storm, or whether it is widely diffused over a large portion of the Province. With the advance of these storms strong humid winds generally set in over the whole province giving rise to general rain for some days.

It will thus be seen that the meteorological conditions of July depend mainly on two points: first, on the character and intensity of the two monsoon currents from the Bay of Bengal and Arabian Sea; and second, on the occurrence, nature and paths of the small cyclonic storms which are so characteristic of the rainy season.

Average distribution of the rainfall in July.—Two lines of maximum normal rainfall may be traced in Bengal during July. The first line is more or less parallel to the sea coast, and is brought by the humid winds from the Bay of Bengal. The second line of maximum rainfall is more or less parallel to the hill ranges in the east and north of the Province, and this is accounted for by the well known fact that these ranges cause ascensional air motion of the Bay of Bengal current, and consequent precipitation of heavy rainfall. The line of 20 inches average rainfall in July runs through the Eastern Bengal districts at some little distance from the coast line, the distance from the coast increasing as it runs to the eastward; the second line of 20 inches average rainfall is found along the Darjeeling Hills, running almost east and west. The line of fifteen inches average rainfall starts from Saugor Island and runs in an easterly direction parallel to the first-mentioned line till near the Tipperah Hills, when it suddenly turns in a north-westerly direction, finally passing through Bogra and Dinagepore, where it is more or less parallel to the line of 20 inches in the Darjeeling Hills. The line of 12 inches average rainfall runs from

Matihari in Northern Behar almost due south-east parallel to the 15-inch line to Rajmehar, and thence through Jessore along the borders of the Chutia Nagpur district into South Behar. Inside this area of average rainfall of less than twelve inches, there are two areas of considerable interest. The first is the area of minimum rainfall of the month, which embraces the Jessore district, some parts of the Naddea and Burdwan districts, as well as the Rajshahye district. This minimum fall is explained by the fact that this portion of Bengal is not influenced by either of the three causes which tend to produce increased rainfall: namely, it is not near the coast line when the humid winds expend their first force; it is not near any hill ranges where ascensional air motion will take place; and third, it is not under the influence of the interaction between the two branches of the monsoon current as previously described. The other area of interest is one of increased precipitation near Patna. The Chutia Nagpur Division receives during the month a normal rainfall of between twelve and fifteen inches, and this comparatively large amount is evidently produced by the interaction of the two branches of the monsoon current over this district.

Meteorological summary of the month—At the commencement of the month there was a comparative lull in the south-west monsoon current from the Bay of Bengal blowing over Bengal, and winds were westerly over the western part of the Province. At this time, however, a strong monsoon current was blowing over the centre and south of the Bay, and on the 2nd of the month this current, with its attendant wave of heavy rainfall, commenced to advance over the Province, at first gradually driving back the westerly current. A kind of contest then commenced between these two wind systems, and after the first advance of the Bengal current just mentioned, the Bombay current began to strengthen, and for four or five days it steadily drove back the Bengal current. On the 9th and 10th, however, the latter current strengthened, and drove back the westerly current, and on the latter date the influence of the westerly current had practically ceased. A slight oscillating action, however, took place between the two currents, which continued up to the 13th, and on the following day a rather rapid fall of the barometer took place at the head of the Bay, and determined the formation of a small barometric depression or cyclonic storm. It was, however, a very small and feeble one, and it was formed apparently close to the Orissa coast, and by Wednesday, the 15th, it had crossed the Orissa coast and was to the west of Cuttack. It then advanced in a north-westerly direction through Chutia Nagpur, gradually becoming more feeble and finally disappeared. The storm was an exceedingly shallow one, and it brought only light rain to the districts through which it passed. Two days afterwards, on the 17th instant, a second exceedingly feeble barometric depression was formed over the Sunderbuns with its centre some little distance to the south-east of Calcutta. This as usual moved in a westerly direction, but it became more feeble in its advance, and it was of such slight intensity that on the 18th it had almost disappeared. On the 19th, pressure which had previously been falling generally over the Province fell particularly in South-West Bengal, and the small storm was intensified, and with its advance inland a general advance of the Bay of Bengal current took place, bringing up heavy and general rain to the greater part of the Province. The Bombay branch of the monsoon current then commenced to make itself felt again, and by its interaction with the Bengal current brought rather heavy rain to Behar. The oscillations of pressure in Bengal at this time were abnormally large, and as the result of a rapid fall of the barometer at the head of the Bay, a small cyclonic storm was formed on the 23rd a short distance from the land, and at 10 A. M. on this day its centre was a short distance to the south-east of Saugor Island. The storm was again of extremely feeble nature, and it moved in a westerly direction crossing the Balasore coast, and on the 24th its centre was to the west of Balasore, but it only brought up small amounts of rain to the districts through which it passed. The small storm continued its advance in a north-westerly direction till the 26th, when it filled up and disappeared. At this time a rapid fall of the barometer took place, which was particularly noticeable over parts of South-West Bengal, and this was followed by the formation on Tuesday, the 27th, of a distinct barometric depression over South-West Bengal, and at 10 A. M. of this day its centre was to the south-east of Calcutta. On the 29th the depression had advanced in a westerly or north-westerly direction, and at 10 A. M. on this day its centre was near Midnapore. It continued its advance on the 30th through Chutia Nagpur, and afterwards travelled through the North-West Provinces, and, according to the telegraphic reports received from the India Meteorological office, the storm was still in existence on Saturday, the 1st of August, near Agra. This storm, it will be seen, had a longer life history than has been the case with most of the small storms, which have been generated at the head of the Bay during the present monsoon, and it would therefore appear to have been of rather greater intensity. It brought up to many stations in its path very heavy rain, and with its advance a light monsoon set in, which, however, seemed to fall off rapidly in intensity at the close of the week, and on the 31st very small amounts of rain only were being received over the Province, and the distribution of the showers was very local. Thus it will be seen that barometric depressions were rather frequent during the month, but that in all cases they were of rather feeble nature.

Pressure was during the previous month almost normal, the average variation being a defect of only about three thousandths of an inch. The actual variations of pressure during the month have of course been generally of the usual oscillatory character, and to a certain extent they have been alluded to under the meteorology for the month. In

addition to these oscillations, however, pressure has to a great extent been governed by the formation and movement of the barometric depressions previously described.

During the first week of the month the average pressure scarcely varied from the normal, but during the second week the distribution changed somewhat, and the average variations from the normal were an excess of 0.04" in Orissa, and a defect of 0.01" in Behar, the average variation for the whole Province being an excess of 0.012". The tendency during the third week was to rather intensify the excess pressure, and it became equal to 0.03". In the following week pressure on the whole decreased, and the result was an average defect of 0.044", while during the last few days of the month the defect averaged 0.033". It will thus be seen that the general average pressure for the whole month has been below the normal by very small amounts, and the actual defect has been only 0.008".

The variations of temperature have been of little or no practical importance throughout the month, and the actual average temperature of all the recording stations is almost absolutely normal temperature. In no meteorological division has the average temperature varied from the normal by as much as 1°, and the largest excess temperature in any division has been 0.6° in Chutia Nagpur, while the largest defect has been 0.4° in Orissa.

Rainfall during the month has on the whole been very continuous, and there have been practically no breaks in any district of any great importance. In Orissa and South-West Bengal, the only days on which rainfall was very scanty or almost absent, were the 12th and the 31st, though in Orissa on the 11th and 13th also rainfall was scanty. In East Bengal rainfall was rather scanty on the 1st, on the 14th and 15th, on the 23rd and 24th and on the 31st. In North Bengal rainfall was almost absent on the 14th, on the 23rd and 24th and on the 31st. In North Behar rainfall was practically absent on the 1st, on the 17th, on the 25th and on the 31st, though in the central parts of the district rainfall was very scanty from the 13th up to the 27th. In South Behar the periods of comparative absence of rainfall were from the 14th to the 18th and on the 31st, and in Chutia Nagpur the rainfalls were decidedly local on the 1st and 2nd, on the 7th and 8th and on the 17th. The extreme frequency of rainy days during the month may perhaps best be seen by stating that in North Bengal the number of rainy days has been 5.3 in excess of the normal number, and in South Behar the number has been 3.5 in excess of the normal. In North Behar the excess number of rainy days has been 2.5, and in East Bengal and Orissa the number of rainy days has been slightly in excess of the normal only. The only districts in which the number of rainy days has been smaller than usual has been South-West Bengal and Chutia Nagpur, but in neither case is the defect more than fractional.

The actual distribution of the rainfall is very difficult to describe clearly, and the lines which represent equal rainfalls over the Province, instead of showing fairly regular curves as described under the head of the normal rainfall of the month, are extremely contorted. The heaviest rainfall in the Province has been at Buxa, which reports 51.58 inches, and from this point, as a kind of centre, the rainfall decreases gradually on all sides till a tract of country is reached where the rainfall is below 10 inches. This tract of country includes parts of the Dacca and Comillah districts, such as Kishoregunge, Brahmanberiah, Dacca and Munshigunge, a large portion of the Furreedpore district, considerable parts of the 24-Pergunnahs district, the southern parts of the Midnapore district, and almost the whole of Orissa and the southern and western parts of Chutia Nagpur and of South Behar. In East Bengal, to the south of this line of low rainfall, the amounts recorded increase again steadily, till at Cox's Bazar the rainfall is 43.9 inches. In North Behar, too, there is an area which has received falls below 10 inches, and this includes the greater part of the Bhagulpore district. Areas of rather large rainfall above 20 inches are also to be found in the South-Pergunnahs and at Kotulpore in the Bankoora district.

Comparing the actual rainfall with the normal, the greater part of the Province shows a fall in excess of the normal. The areas which show a defective fall may be briefly described as the south-eastern and south-western districts and a portion of North Behar. The north-eastern parts of the Province show very large excess falls, and the central parts and the north-western divisions generally considerable excess falls. The area of greatest excess again starts from the Darjeeling Hills, and from this point spreads out on all sides, the amount of the excess gradually diminishing till it meets the line of normal rainfall in the south-western and south-eastern districts, though of course the area of defective rainfall in North Behar must be excluded in this statement. The line dividing the areas which have received excess falls from those in defect may be said to start from the Mymensingh district and to pass through the Pubna, Furreedpore, Nuddea, and 24-Pergunnahs districts to Midnapore, and then to pass in a north-westerly direction through Bankoora, Hazaribagh, Gya, and Shahabad districts. There are again a good many local exceptions to this rough description, and of these the markedly defective falls (beyond the falls at the neighbouring stations) at the following places are the most important: Munshigunge, Rangamati, Bongong, Beerbhoom, Monghyr, Sasseram, Jellasore, Chandbally, Jajpore, Hookitolah, False Point, and Pooree. It may here be noticed that many parts of the Burdwan, Nuddea, Bankoora, and Hooghly districts, which have previously received comparatively small amounts of rain during this year, show an excess fall.

Taking up the average rainfall of the seven meteorological divisions, North Bengal has received a fall largely in excess of the normal, having reported an average of 18.99 inches against the normal fall of 13.91 inches, which is 36 per cent. in excess of the normal. North Behar has received an excess fall of 1.46 inches, which is equal to 12 per cent. in excess of the normal. South Behar has received 12.86 inches against the normal amount of 11.86 inches,

which is 8 per cent. in excess. South-West Bengal has recorded an average fall of 11.55 inches against the normal 11.75 inches, which is only 2 per cent. in defect. Chutia Nagpur has received 12.96 inches against 13.60 inches, which is equal to 5 per cent. in defect. East Bengal has received 15.72 inches against the ordinary fall of 16.65 inches, and is therefore 6 per cent. in defect; while Orissa has only received 9.77 inches against the normal fall of 13.46 inches, or is no less than 28 per cent. in defect. It will thus be seen that the only district which has really suffered from a rainfall decidedly in defect is Orissa. Putting the defects against the excess falls, and considering the divisions of equal value, it would appear that the Province, on the whole, has received a rainfall of 2 per cent. in excess of the normal fall.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of July in all districts of the Province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the normal rainfall and is hence the difference between the numbers in the third column and 100.

DIVISION.	District.	Normal district rainfall, July.	Actual district rainfall, July 1885.	Percentage of actual to normal rainfall.	Percentage excess (+) or deficit (-).

The mean humidity of the month	86		
The average humidity of July from 24 years' registers ...	85		
inches.			
The mean vapour tension of the month	0.987		
The average vapour tension of July from 9 years' registers ...	1.002		
The mean cloud proportion of the month	8.46		
The average cloud proportion of July from 8 years' registers ...	8.07		
Inches.			
The total rainfall of the month	8.12		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	7.73		
The average fall of July from 48 years' registers ...	12.84		
The greatest fall in 24 hours	1.13	27th	
Days.			
The number of rainy days in the month	28		
The average number of rainy days in July from 24 years' registers	25		
°			
The mean maximum equilibrium temperature of solar radiation during the month	148.5		
The mean difference of sun and air temperatures	59.8		
The greatest sun temperature	160.5	14th	
The greatest excess of sun over air temperature	70.7	14th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	76.6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	1.8		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	3.5	11th	
Miles.			
The mean movement of the wind per day	140.7		
The greatest movement of the wind in one day	225.0	11th	
The greatest movement of the wind in one hour	17.0	8th 9 to 10 a. m.	
The number of hours with winds from each of the 8 points—			

N. 5, NE. 32, E. 81, SE. 139, S. 300, SW. 149, W. 20, NW. 13, Calm 5.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.6 higher; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 10th August 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 7TH OF AUGUST 1885.

At the close of the previous week a small cyclonic storm had passed away from Bengal into the North-West Provinces, and with its advance a light monsoon had set in over the Province. On the Saturday pressure was falling generally, and there was a tendency to the formation of an area of low pressure over Central Bengal, and around this area of low pressure there was a distinct tendency for winds to circulate cyclonically. The falling pressure continued on the 2nd, and in addition to the slight barometric depression in Central Bengal, centres of comparatively low pressure appeared in North and in South Behar. On this day the tendency to cyclonic circulation of winds round the area of low pressure in Central Bengal was distinctly marked, though over the remainder of the Province nearly normal monsoon winds were blowing. The small depression then commenced to travel in a westerly direction, and on Monday, the 3rd, instant, it apparently became absorbed in the general comparatively low pressure area, which usually exists at this period in South Behar and Chutia Nagpur, though during this day also winds at the western stations were somewhat irregular, but they still showed the apparent influence of the area of low pressure.

During the existence of the depression in Central Bengal, and its westerly movement, it brought moderate to heavy rain to many of the districts in Central and South-West Bengal, and also to Chutia Nagpur and parts of South Behar and Orissa, but in East and North Bengal and North Behar the rainfall was decidedly lighter. Immediately after the disappearance of this first depression, a second area of low pressure commenced to form over Central Bengal, which was attended by the usual cyclonic circulation of winds. At the same time fairly strong humid winds were blowing over South-West Bengal, apparently brought up by the previous depression, and these tended to strengthen the depression which had formed, and it commenced to move as a clearly marked but still feeble cyclonic storm in a westerly direction, and on the morning of the 5th its centre was not far from Burdwan, where the pressure on this day was 29.528". It again moved in a westerly direction, and on the 6th the depression was in Chutia Nagpur not far from Hazaribagh, and again on Friday, the 7th, the small storm was distinctly perceptible in the neighbourhood of Gya, though it was evidently growing more feeble and was rapidly breaking up. This storm was decidedly larger and more influential than the previous one, and it was fed by rather strong moist southerly winds, and it therefore again gave rise to very heavy rainfall in the districts affected by it, while at the same time it brought lighter rain to the other districts of the Province. The rainfall was therefore exceptionally heavy in South-West and Central Bengal on the 5th, and lighter on the 6th and 7th, and it was also very heavy in Chutia Nagpur and South Behar on the 5th, 6th and 7th.

Pressure during the week has been mainly influenced by the two barometric depressions above described, and though there were other oscillatory changes occurring simultaneously over the greater part of the Province, they were of not much importance. As may be expected, the central parts of Bengal and South Behar show a pressure distinctly lower than the remainder of the Province, and thus while at Moorshedabad, Jessore and Gya pressure has been from 0.03" to 0.04" below the normal, in Orissa pressure has been 0.03" above the normal, and in North Behar and East Bengal it has been practically normal. The average pressure for the whole Province for the week has been 0.007" below the normal as compared with a defect of 0.033" during the previous week. The tendency of the pressure changes has therefore been in an upward direction.

The changes of temperature have also been comparatively small during the week. On the 1st it was generally rather above the normal, the excess varying from 1° to 2°. On the following day, however, it fell and became nearly normal except in Orissa, where it was in defect and with slight variations temperature oscillated a little above the normal or below it for the remainder of the week. The average of the whole week shows that in Orissa there was a defect of 0.9°, and in East Bengal a defect of 1.0°; in South-West Bengal and South Behar temperature has been normal, while in Chutia Nagpur there has been a slight excess temperature of 0.4°, and in North Behar an excess temperature of 0.7°.

The rainfall for the week, as will be seen in the description previously given, has been particularly heavy in the central portions and southern districts of the Province, while it has been comparatively light in the northern districts, and to a certain extent also in the eastern districts. Thus Chutia Nagpur has received 6.25 inches of rain against the normal amount of 3.71 inches, which is no less than 69 per cent. in excess. South-West Bengal has received 4.27 inches against the normal 2.85 inches, or nearly 50 per cent. in excess. South Behar has recorded 3.68 inches against 2.58 inches, which is 43 per cent. in excess, and East Bengal 4.08 inches against 3.77 inches, which is 7 per cent. in excess. The other three divisions have received defective falls, North Behar reporting 2.02 inches against 2.33 inches, or 13 per cent. in defect, North Bengal 1.59 inches against 2.60 inches, or 39 per cent. in defect, and Orissa has received 3.0 inches against the normal 3.25 inches, or 5 per cent. in defect. It will thus be seen that those districts, such as Chutia Nagpur and parts of South Bengal, which were in defect in July are now receiving an excess fall, and those districts, such as South Bengal and North Behar, which received previously an excess fall, are now receiving a diminished fall.

During the week there have been some exceptionally heavy rainfalls recorded. Thus on the 1st instant Buxa reported 5·82 inches, on the 2nd instant Contai in the Midnapore district reported the excessive fall of 11·55 inches, and Bhagwanpore in the same district also received 8·5 inches, Balarampore in the Purneah district on this day received 4·06 inches, and at Deoghur 5·23 inches were registered. On the 3rd Ghatal (Midnapore district) registered 4·04 inches, Kotalpore (Bankoora district) 5·37 inches, and Onda (Bankoora district) 4·60 inches. On the 4th Hooghly received 4·3 inches, and Pakri Barwan (Gya district) 4·18 inches. On the 5th Ghatal again registered 6·15 inches, Garhetta (Midnapore district) 9·34 inches, Barrackpore 5·37 inches, Jehanabad (Hooghly district) 8·02 inches, Raipore (Bankoora district) 8·03 inches, Bauphal (Backergunge district) 4·78 inches and Bettiah 4·18 inches. On the 6th Palamow registered 4·85 inches, and on the 7th Aurangabad received 4·20 inches. Also during the week heavy rainfalls in excess of two and three inches have been so numerous that no attempt can be made to mention them. The number of rainy days during the week have in the various divisions been nearly equal to the normal, and thus over the whole Province the normal number of rainy days for this week is 4·3, while the actual average number of rainy days has been 4·5.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 7th of August 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.		Rainy days.			Since 1st of month.		Since 15th May 1885.

The mean pressure of the seven days ... 29.526
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.584

The total number of hours of bright sunshine ... 22.4
The maximum possible number of hours of sunshine ... 21.4

The mean temperature of the seven days ... 81.8
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83.0
The extreme variation of temperature ... 11.3
The maximum temperature ... 87.7

The highest velocity of the wind in one hour ... 16

The highest pressure of wind on one square foot ... 3

The mean relative humidity ... 88
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 87

The total fall of rain from 2nd to 8th August 1885 ... 4.00
The average fall of the corresponding period for 24 years, S. G.'s Office ... 2.58
The total fall from 1st January to 8th August 1885 ... 32.88
The average fall of the corresponding period for 24 years, S. G.'s Office ... 38.00

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No 45 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers.

ALEXANDER FIEDLER.

The extreme variation of temperature 13.2

The maximum temperature 90.0

The mean relative humidity 91

The total fall of rain from 2nd to 8th August 1885 8.50

The mean temperature and humidity are obtained by applying to the mean of the 10a, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 10th August 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE main features in connection with the mortuary statistics of the districts in Bengal for the month of June 1885, as gathered from the table appended to this memoranda, are the following—

1. That the deaths of 99,476 persons were registered out of a population of 66,163,884 in these districts, representing an annual death-rate of 18·00 per 1,000 against 20·64 per 1,000 in the preceding month, and 17·76 per 1,000 during the corresponding month of the past year, indicating, as compared with the preceding month, a considerable falling off in the registration of deaths.

2. That the following districts furnished the highest proportions of deaths :—

Districts.			Ratio per mille.	Districts.			Ratio per mille.
Birbhum	40·56	Julpaiguri	24·72
Rajshahye	30·96	Hazaribagh	24·24
Burdwan	29·16	Monghyr	24·12
Nuddea	28·92	Maldah	23·76

3. That the mortality from the principal death-causes, as contrasted with the results of the corresponding month of 1884, stands as follows :—

						Ratio per mille during—	
						June 1885.	June 1884.
Cholera	2·28	1·08
Small-pox	·12	·30
Fever	11·64	12·00
Bowel-complaints	·72	·72
Injury	·60	·48
Other causes	2·28	2·28

The only noticeable feature revealed by the above figures is that there was a sensible increase in fatal results from cholera, and a decrease in that from fever.

4. That of the diseases named above, while small-pox and maladies grouped under the head of "Other causes" were noticeably fatal only in the Chumparun and Poori districts at the rates of 2·76 and 10·20 per 1,000 of their population, respectively, and bowel-complaints and injury proved nowhere severe, cholera and fever caused the highest mortality in the following districts :—

Cholera.			Ratio per mille.	Fever.			Ratio per mille.
Birbhum	22·08	Nuddea	23·40
Rajshahye	10·44	Julpaiguri	21·48
Maldah	9·12				
Hazaribagh	8·76				
Burdwan	8·04				
Manbhum	6·84				
Balasore	3·84				
Durbhunga	3·12				
Bankura	2·88				
Monghyr	2·88				
Murshidabad	2·76				
Shahabad	2·64				
Sonthal Pergunnahs	2·64				

5 That the mortality of the month under the heads of Sex, Class and Age, stands as indicated below :—

According to Sex.			Ratio per mille.	According to Class.			Ratio per mille.	According to Age.			Ratio per mille.
Males	18·92	Christians	11·04	Under 1 year	97·56
Females	16·08	Hindus	18·24	1 and under 5 years	20·40
Ratio of male deaths to every 100 female deaths	122			Mahomedans	17·88	5 " 10 "	10·20
				Budhists	16·20	10 " 15 "	9·60
				Other classes	12·60	15 " 20 "	13·32
								20 " 30 "	13·64
								30 " 40 "	14·64
								40 " 50 "	17·76
								50 " 60 "	23·76
								60 years and upwards	37·56

R. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 10th August 1885.

Statement showing the Results of the Registration of Deaths in the Districts in Bengal for the month of June 1885.

POPULATION.		DEATHS FROM—										DISEASE.										RATIO PER 1,000 OF POPULATION PER ANNUM.		COMPARISON WITH PREVIOUS PERIODS.		DEATHS AMONG—		RATIO PER 1,000 CIVILIZATION PER ANNUM.		Ratio of male deaths to every 100 female deaths.

MEMORANDA.

Births and deaths were registered in the principal Municipalities in Bengal during the week ending 25th July 1885, in the proportions, respectively, of 25·2 and 38·7 per 1,000 of population, against 21·2 and 39·0 per 1,000, respectively, during the preceding week ending 18th July, indicating a considerable advance in the registration of births.

2. In the following Municipalities births and deaths were reported to have occurred at the highest rates:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	47·1	Puri	138·5
Gya	43·7	Mozufferpore	77·8
Patna	36·6	Gya	75·1
Serampore	33·4	Chittagong	68·1
Durbhanga	33·1	Bhagulpore	51·6
Howrah	32·0	Patna	50·9
Chupra	30·2	Monghyr	47·0
				Suburbs of Calcutta	40·9
				Purneah	38·1
				Durbhanga	33·9
				Burdwan	32·0
				Hughli	30·9

3. The following figures represent the rates of mortality from the principal diseases contrasted with similar information for the preceding week:—

				Ratio per mille during the weeks ending—	
				25th July 1885.	18th July 1885.
Cholera	8·1	12·5
Small-pox	·3	·2
Fever	14·9	11·6
Bowel-complaints	4·6	4·7
Injury	·5	·3
Other causes	10·3	9·6

indicating chiefly that the severity of cholera had on the whole declined considerably, and that fever exhibited much enhanced mortality.

4. Referring to the death-causes above indicated, while bowel-complaints proved conspicuously fatal only in Patna Town, at the rate of 10·4 per 1,000 of its population, and small-pox and injury did not exhibit more than normal severity anywhere, cholera, fever and the diseases classed under the head of "Other causes" proved most fatal to life in the following Municipalities:—

Cholera.		Fever.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Puri	109·1	Purneah	38·1	Gya	22·5
Mozufferpore	40·1	Chittavong	30·5	Puri	16·8
Chittagong	30·5	Mozufferpore	29·2	Patna	15·9
Monghyr	26·2	Gya	27·2	Suburbs of Calcutta	13·8
Gya	17·7	Bhagulpore	26·3	Bhagulpore	13·6
Durbhanga	6·3			Burdwan	12·1
Suburbs of Calcutta	5·4			Dacca	11·6

5. Under the heads of *Sex*, *Class* and *Age*, the mortality of the week is stated to have been distributed as follows:—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	40·5	Christians	34·8	Under 1 year	361·9
Females	36·7	Hindus	40·4	1 and under 5 years	57·8
Ratio of male deaths to every 100 female deaths	125	Mahomedans	34·8	5 " 10 "	32·9
		Budhists	48·4	10 " 15 "	24·0
				15 " 20 "	28·2
				20 " 30 "	20·3
				30 " 40 "	29·8
				40 " 50 "	27·2
				50 " 60 "	14·3
				60 years and upwards	52·4

The 10th August 1885.

B. LIDDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE JAIL DEPARTMENT FOR THE YEAR 1884.

RESOLUTION.

JAILS.

Dated Calcutta, the 10th August 1885.

READ—

The Report on the Administration of the Jail Department for the year 1884.

Read also—

The Reports for the years 1882 and 1883, and the orders of Government recorded thereon.

THE Annual Report on the Administration of Jails in Bengal for 1884 was not received from the Inspector-General until the end of June. The delay in submission is ascribed by the Inspector-General to the late receipt by him of returns from the Bhagulpore Central Jail, at which jail he was obliged to weaken the staff at a critical time by deputing an officer to fill a vacancy elsewhere. Unless this transfer and the consequent delay in submission of the returns were wholly unexpected and unavoidable, the Lieutenant-Governor must express his regret that the Inspector-General was not more careful to comply with the orders repeatedly issued for the punctual submission of Administration Reports.

2. No administrative changes of any importance were made in the management of the Jail Department. Owing to a partial failure of crops, and to the distress among the poorer classes thereby occasioned in some places, the steady decrease noticed in preceding years in the daily average number of prisoners was checked, and the number of convicts remaining in jail at the close of

1884 was slightly greater than at the end of 1883. There was an improvement in the general health of the prisoners, and in the number and percentage of deaths. The state of discipline among the prisoners was apparently less satisfactory than in 1883. The number of offences against prison discipline largely increased. Of the severer forms of punishment for jail offences, sentences of flogging slightly, and those of solitary confinement with reduced diet very greatly, decreased. The punishments inflicted increased, however, on the whole, largely. The accommodation for juvenile offenders in reformatory schools, though perhaps not yet sufficient, was considerably extended. In the cost of jail administration, excluding the expenditure on new jails, additions alterations and repairs, there was some increase owing chiefly to the rise in the cost of provisions and to a larger expenditure on clothing. The expenditure of the Public Works Department on jail buildings shows a large decrease owing partly to the completion of several important works and partly to deficiency of funds. While the average earnings of the prisoners employed on jail manufactures somewhat decreased, owing chiefly to the general depression of trade throughout the country, the amount of total net cash earnings of the prisoners remained almost stationary. The results of the jail administration were on the whole fairly satisfactory.

3. The following table shows the statistics of convicts in the jails during the year compared with the previous seven years :—

	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.
Number of convicts in jails and subsidiary jails on the last day of the previous year ...	19,880	17,039	17,936	17,200	16,294	15,231	14,877	13,417
Admitted direct during the year ...	26,462	28,929	25,776	33,335	31,405	31,710	29,763	32,034
Total ...	55,302	55,968	53,662	50,535	47,749	46,941	44,640	45,451
Admitted by transfer ...	19,528	20,132	20,000	18,811	17,094	16,780	16,499	16,690
Total ...	74,830	76,100	74,102	69,310	64,843	62,701	59,639	62,111
Deduct ...								
Transferred ...	19,663	20,858	20,206	18,644	16,810	15,618	15,274	16,410
Released ...	57,272	56,277	54,977	53,230	51,004	51,701	50,173	50,707
Escaped ...	20	41	34	12	14	8	12	9
Died ...	877	1,230	1,801	1,094	1,065	1,034	725	691
Executed ...	00	57	54	73	59	35	35	43
Total discharged ...	57,701	58,164	56,982	53,002	49,013	48,324	46,222	48,040
Balance at the end of the year ...	17,039	17,039	17,200	16,294	15,231	14,377	13,417	14,051
Daily average number of convicts ...	17,527	17,274	17,258	16,673	15,506	14,801	13,711	13,697

The number of convicts directly admitted during the year increased by more than 7 per cent., viz. from 29,763 to 32,034. The direct admissions were more numerous than in any of the three preceding years; but assuming that the distress felt in some districts acted as an incentive to crime, they were, taken in the aggregate, less numerous than might have been expected. In 12 districts, most conspicuously in Durbhunga, the Sonthal Pergunnahs, Bhagulpore, 24-Pergunnahs, and Mozufferpore, the increase of convicts admitted to jails and subsidiary jails aggregated 2,409. These districts were for the most part in Behar, where distress was most severely felt. In six districts of Bengal, viz. Mymensingh, Backergunge, Pubna, Chittagong, Tipperah, and Bogra, the admissions to jail of convicts decreased by 827.

4. The total daily average population of convicts in central, district, and subsidiary jails for the last five years is shown in the statement below :—

	1880.		1881.		1882.		1883.		1884.	
	Average population.	Percentage to grand total.	Average population.	Percentage to grand total.	Average population.	Percentage to grand total.	Average population.	Percentage to grand total.	Average population.	Percentage to grand total.
Central Jails including the Nazaribagh Jail.	7,063	47.87	7,757	50.03	7,712	51.10	7,663	55.91	7,446	54.36
District Jails ...	8,439	50.63	7,506	45.40	6,979	46.01	5,781	43.16	5,944	43.54
Subsidiary " ...	251	1.51	244	1.57	290	1.89	295	1.93	298	2.10
Total	16,673	15,506	14,981	13,711	13,697

Thus, although the admissions during the year and the number of the prisoners in jail at its close were more numerous than in 1883, the total daily average convict population, though to an inappreciable extent, actually decreased: the proportion of convicts confined in central jails declined from 55.91 to 54.36 per cent., and of those confined in district jails increased from 42.16 to 43.54 per cent. This result, the Inspector-General remarks, appears to point to an increase in the number of sentences of short terms of imprisonment, and as no prisoner under sentence of imprisonment for less than six months is transferred to a central jail, the convict population of the central jails decreased. The explanation given is probably correct. Sentences of six months' or less than six months' imprisonment increased from 23,114 to 25,303: sentences of between six months and two years from 5,151 to 5,257. On the other hand, there was a considerable decrease in sentences of transportation and imprisonment for terms exceeding five years. The increase in convictions was chiefly under heads of offences against property; but until the returns of the Police Department are received, it cannot be ascertained whether the decrease in the length of sentences was due to an actual improvement in the character of serious crime. Considering, however, the prevalence of high prices of food during the year, and the consequent inducement to crime, there are no grounds for believing that either the increase in convictions generally, or the very slight increase in the percentage of habitual offenders, was caused by undue leniency on the part of convicting officers. Although the percentage of prisoners confined in central jails to the total average jail population declined, the actual number of prisoners admitted direct increased from 4,452 to 4,938, and of those transferred from other jails from 4,865 to 5,335. At the close of the year there were 7,704 prisoners in central jails against 7,449 at the close of 1883. The principle of concentrating the long-term prisoners in central jails has therefore, as far as practicable, been observed.

5. In the numbers of prisoners transferred and released, there was an increase consequent on the greater number of admissions. The percentage of convicts released on appeal rose slightly for causes not explained. In 1883 there were 2,149 convicts released, who had been under the mark system, and of these 1,913 received remission of sentences on earning marks. In 1884, owing to the general shortening in terms of sentence of those released, only 1,858 were under the mark system, and of these 193 failed to obtain sufficient marks to entitle them to any remission. Five convicts, three of whom were Europeans, were released on special grounds for good service. The number of convicts executed increased from 35 to 43. Twenty-two prisoners were released under a rule of the Jail Code, which permits the release of a prisoner who has not more than six months to remain in jail, and has there contracted a disease likely to prove fatal if he remains, but from which he has a good chance of recovery if he be released. In 1883 the number of prisoners released under this rule was 41. On this subject the Inspector-General remarks: "There is a decrease in the number of convicts released on medical grounds, and, nevertheless, several were improperly released, their deaths immediately after release proving that their chance of recovery was not sufficiently good to justify their release under the terms of rule 497.* * * I do not think it right that the death-rate of jails should be ostensibly reduced by releasing prisoners who are dying. Much as a high death-rate in the jail population is to be deplored, I consider it objectionable that the true facts should in any way be obscured; and whether the death of a prisoner is due to the conditions of jail life or not, the fact of such death should not be concealed by his removal from jail in moribund condition." With these remarks the Lieutenant-Governor entirely concurs. They are, however, so obvious that the necessity of making them is not clear. The object of the rule is the release of prisoners who would, if released, probably recover, and who would, if kept in confinement, almost certainly die. If a jail officer takes advantage of the rule so as to release a prisoner in a moribund condition in order to reduce the nominal death-rate of the jail, he is guilty of gross dereliction of duty, and the Lieutenant-Governor is prepared to deal severely with any plain case of such misconduct whenever brought to his notice. But Sir Rivers Thompson

believes that Superintendents of jails seldom err in this direction. The rule is one that needs to be worked with discretion. Convicts released under it are for the most part those who have suffered long from phthisis or bowel complaints. A prisoner's condition becomes either gradually or rapidly worse, and the Superintendent sees that the only chance of saving his life is to release him. But the change may come too late. The sufferer may not have the strength to bear the journey to his home or his downward progress may have made such way that it cannot be checked. Still the Lieutenant-Governor would prefer that an occasional prisoner should die immediately after release rather than that numerous prisoners should die in jail who might possibly have been saved had the rule been applied with a little less strictness and a little more humanity.

6. Of 521 prisoners transported beyond seas during the year, 471 were males and 50 females, the total being less by 50 than in 1883, and more by three than in 1882. The medical board at Alipore rejected 107 prisoners as unfit for transportation, of whom 37 were received from Bengal and 70 from other provinces. In 1883 the number rejected by the board was 138. In the Resolution on the Report for 1883, the Lieutenant-Governor expressed himself satisfied that the medical board performed their duties not only with the ability which might be confidently expected in such a body, but also with all possible care and thoroughness, and stated his opinion that the frequent rejection, by the board, of convicts whom the local medical officers had certified to be in good health and fit for transportation, appeared to indicate necessity for greater care and watchfulness in the preliminary enquiries held before granting certificates. Greater care accordingly was observed during the past year in the preliminary examinations in Bengal. Out of 572 prisoners under sentence of transportation beyond seas the number from Bengal rejected was only 37 or slightly more than 7 per cent. In 1883, out of 514 prisoners under such sentence, 86 from Bengal were rejected or more than 16 per cent. On the other hand, the number of those rejected out of such prisoners received from other provinces increased from 52 to 70. It has not been shown in the statements forwarded by the Inspector-General what was the total number of prisoners under sentences of transportation received from other provinces. In future reports the Inspector-General should state for each province the number received for transportation and rejected by the medical board. It seems plain that the preliminary examinations held by the medical officers in other provinces was at least not less superficial than in former years, and that the conveyance for long distances to, and re-conveyance from, the Alipore jail with their guards of prisoners wholly unfit for transportation, must have entailed considerable expense on the State which might well have been avoided.

7. Early in 1884 the Government of India directed that, in view of the recent large increase in the number of life and long-term prisoners in Burmah under sentence of transportation, the arrangement under which 20 of these convicts were annually sent to these provinces should not be disturbed. Provision was accordingly made for the accommodation of an increased number of convicts in the Bengal jails, and the Lieutenant-Governor expressed an opinion that, if properly and firmly treated, the Burmans would be found amenable to discipline, and become useful workers. This has been fully realized. At the beginning of 1884 there were 64 Burman convicts in the jails of these provinces; 45 more were received in the course of the year; three having died, there were at its close 106. Of these, 35 were confined in the Alipore central jail, eight in the Presidency, and the same number in the Dacca central jail; seven in the Buxar, four in the Midnapore, and four in the Bhagulpore central jail; two were imprisoned in each of 19 district jails; one in the Patna, and one in the Jessore jail. The Inspector-General states that he can, if necessary, find accommodation for a total of 141. The health of these prisoners has been fairly good, and their conduct on the whole satisfactory. Two were flogged for attempting to escape at Patna, and two put in fetters for a year at Monghyr for striking a convict officer. The result of training them as blacksmiths and carpenters, and to work on machinery, has been decidedly satisfactory, and they promise to make thoroughly useful artisans.

8. Of the convicts admitted the percentage of Christians decreased from 2.05 to 1.66; and of Musulmans from 40.82 to 37.98; that of Hindoos increased from 54.12 to 57.36; and that of Buddhists and Jains from 0.44 to 0.51. There was a decrease in the percentage of convicts of other religions from 2.57 to 2.49. Of the Christian convicts, 296 were Europeans, 139 Eurasians, and 96 Native Christians. The only explanation given on the fluctuation in the numbers of convicts of the several religious faiths is in regard to European Christians. It is stated that owing to decline in the trade of the port of Chittagong, the number of European prisoners, the majority of whom are sailors from ships in Port, decreased from 49 to 22. The probable explanation of the increase from 16,107 to 18,375 in the number of Hindoo convicts with an increase in the number of Musulman convicts merely from 12,150 to 12,168, is that the immense majority of the population in the poorer western districts, where there was a partial failure of the crops, are Hindoos; while in the eastern districts where the population is mainly Musulman, the distress, if it prevailed at all, was comparatively slight.

9. Convicts of ages under 16 increased from 318 to 408. There was no noticeable fluctuation in the numbers of convicts admitted of other ages. Of the juvenile convicts 362 were boys, and of these 37 had been previously convicted. There were admitted to the subsidiary jails 152, and to the district and central jails 210 boy convicts. Twelve were confined in the Chumparun, 18 in the Patna, 21 in the Gya, and 25 in the Presidency jail. In reviewing the jail administration of 1883 the Lieutenant-Governor remarked that of the boys sent to jails it could hardly be doubted that a considerable proportion ought to have been sent to the reformatories, and that until those institutions were full no such offender should, as a rule, be sent to a jail. The Inspector-General of Jails has mistakenly inferred from these remarks that it was his duty whenever he observed juvenile male convicts in jail to direct their production by the Superintendents before the Magistrate of district with a view to their being sent to reformatories, and states generally that he considers the imprisonment of a boy in a jail as objectionable, and that, except when under trial, boys should not be kept in prison at all. While Sir Rivers Thompson agrees with the Inspector-General that the confinement of a boy in a jail is, as a general rule, objectionable, it was certainly not his wish or the intention of the Act that all juvenile male offenders should be sent to reformatories irrespective of the offences of which they were convicted. These institutions are intended for those who, there is reason to believe, would, if confined in jails and released without any means of support, grow up to be habitual criminals. It is unnecessary therefore, indeed it is positively mischievous, to send to the reformatories boys convicted of offences not indicating depravity, or having relatives who are able and willing to attend to their proper training, because if this is done the accommodation space is *pro tanto* reduced, and boys who should go there are kept out for want of room. The Lieutenant-Governor trusts to the good sense of Magistrates to decide whether a juvenile offender should be sent to a reformatory; and, if not, to award him such legal punishment as may seem suitable to his case. The subject has been fully dealt with in the Resolution on the report of the administration of reformatories in 1884, and need not further be referred to here.

10. The number of convicts who, before conviction, were employed under Government or local authorities, was 1,407; of those engaged in professions 1,227; of servants 2,175; of cultivators and herdsmen 17,373; of traders 1,129; of mechanics 697; of persons not classed 6,431. The differences between these figures and those of the preceding year for all classes excepting the last were only nominal.

11. Convicts sentenced to simple imprisonment decreased from 2,241 to 1,868, while sentences of rigorous imprisonment increased from 27,333 to 30,005. Sentences of rigorous imprisonment with solitary confinement are less by 38 than in the preceding year, the total number being only 28 in the whole province. The Lieutenant-Governor concurs with the Inspector-General in thinking that this form of punishment acts as a greater deterrent than most others. The number of cells in Bengal jails has of late been much increased, and it is to be regretted that they should not be more utilized. No

explanation is given of the decrease in the number of sentences of simple imprisonment, and these figures are at variance with the statement of the Inspector-General that there is an increasing tendency on the part of Magistrates to deal leniently with crime.

12. One thousand five hundred and ninety-five female convicts, of whom 46 are stated to have been under the age of 16, were admitted into the jails during the year under report against 1,365 in 1883. The women's jail at Russa was closed from the end of 1883, and the female convicts transferred to Alipore and other jails. The buildings at Russa were not, however, given up. They have, since the close of the year, been found of use for the confinement of female prisoners during an outbreak of cholera in the Alipore jail. The question of the proper place of confinement for female prisoners from Calcutta is now under the consideration of the Lieutenant-Governor. It was hoped that the completion of the various central jails would obviate the necessity of overcrowding the wards for females in district jails. Owing, however, to the number of civil, under-trial, and short-term female convicts who cannot be transferred to central jails, difficulties are still met with in this respect.

13. Both the percentage to the total number of convicts and the number of re-convicted convicts increased. The number was 3,915 against 3,540, and the percentage 12·22 against 11·89 in the previous year: 2,874, it was ascertained, had been once, 694 twice, and 347 more than twice before convicted. Of the 3,915 convicts recognized as habitual criminals, 1,103 were not recognized as such until after their conviction. With regard to the identification of previously-convicted prisoners, the Inspector-General observes: "The Jail Code indicates the duty of all jail officials to bring to notice whatever they may know of the previous history of convicts, and I have directed that notes may be made in the service registers of officers who give valuable information on the subject. I think it would be advisable to give rewards to warders and head-warders who identify convicts as old offenders when the police have failed to do so. I am not aware whether the examination of prisoners on parade by the police has led to the recognition of any habitual criminals, but every facility is given for it by the jail officers. The greater number of criminals in Bengal is probably convicted in the districts of which they are natives and residents, and, with reference to them, it is inexcusable that the local police should be ignorant of any previous convictions; many others give a true account of their names and places of residence, and their antecedents may be verified on reference by the police within whose jurisdiction those places may be. It is the few prisoners forming the residue who give false accounts of themselves, and who change their names and habitations frequently, whom it is difficult to identify, and to the registration of whose appearance by photography and other means the efforts of police and jail officers should be directed." The Lieutenant-Governor agrees with the Inspector-General that it is the undoubted duty of all jail officials to bring to notice whatever they may know of the previous history of convicts. It is not, however, explained why, if that duty was properly performed, 1,103 convicts or more than 28 per cent. were not till after sentence identified as habitual criminals. It is the duty of jail officials under Rule 795 of the Jail Code to bring to the knowledge of the Magistrate the previous convictions of under-trial prisoners, and no pains on their part should be spared to comply with the rule. To report the previous convictions of a prisoner after sentence has been passed on him is of comparatively little use, as they cannot then operate as a reason for enhancing his sentence. The Inspector-General has not stated how far the jail officials assisted in procuring the identification of habitual criminals before sentence, when detained in the ward for under-trial prisoners, or when sent by Magistrates to jails for recognition: nor to what extent the procedure suggested in the Resolution on his report for 1883, that Superintendents of jails should communicate to the police and to each other the descriptive rolls of persons suspected to be habitual criminals, or of concealing their true names and districts, with the facts discovered regarding them after admission, was followed. The suggestion that it would be advisable to give rewards to warders and head-warders who identify convicts as old offenders, when the police have failed to identify them, does not

commend itself to the Lieutenant-Governor. The inevitable result would be to encourage the warders in antagonism towards, instead of co-operation with, the police. The questions of the definition, identification, and treatment of habitual criminals are, under orders of the Government of India, now being considered, and the Inspector-General states that he hopes shortly to submit a report on the subject after consulting officers whose opinions should be valuable. The Lieutenant-Governor will await the report before passing final orders. If in the meantime the Inspector-General will, during his inspections of jails, ascertain the reason why so large a proportion of previously convicted prisoners is recognized by jail officials only after sentence instead of before, and the extent to which those officials have actually aided Magistrates and the police by proving the previous convictions of under-trial prisoners, he may be able to offer suggestions of more practical value than those contained in his present report. The registers of previous convictions kept by Magistrates, under the orders of the High Court, deal only with those more serious offences for which enhancement of punishment is provided, on a second or subsequent conviction, by section 75 of the Penal Code and section 4 of the Whipping Act; while under a rule of the Jail Code, section 454, the Superintendent of a Jail has to record all convictions of convicts received. The statement of previously convicted prisoners, forwarded with the report, apparently includes convicts previously convicted of all classes of offences, petty or serious; if this is so, it is obvious that all deductions from it as to the leniency of sentencing officers, and as to want of detective ability on the part of the police, are entirely fallacious. The Lieutenant-Governor gathers from some remarks of the Inspector-General that, in his opinion, previously convicted prisoners, even those whose antecedents are known, are sentenced by courts with too great leniency. Neither in the body of the report, nor in the statements appended to it, however, are there any statistics which support such an opinion, though it would seem from the remark at the bottom of page 13 of the report that some instances of the kind have come under his notice.

14. Under-trial prisoners detained in jails and subsidiary jails increased from 27,088 to 29,914, and the daily average of their number from 1,065 to 1,170. The increase was due to the general increase of crime, of which the causes have been already noticed. In ten jails the average period of detention exceeded 20 days: the general average in all jails was 17·30. The general average term of detention of all under-trial prisoners decreased from 14·90 to 14·86 days. The number of deaths among under-trial prisoners increased from 34 to 49. It is stated in the report that the accommodation for under-trial prisoners in many jails is very inadequate, and that the prisons are frequently overcrowded. The subject will have to be considered when funds are available. Under-trial prisoners compare favourably with convicts in regard to sickness and mortality, and the Lieutenant-Governor, on the information which he at present has on their condition, does not consider that their necessities are of pressing moment. The number of civil prisoners increased from 3,511 to 3,545; but the daily average decreased from 249 to 233·8. The fluctuation was not of any importance. It is remarked in the report that the civil jails are not within jail gates, and in the new jails specially are so constructed that the inmates can easily escape. As, however, only one civil prisoner out of 3,545 escaped, the civil jails would seem sufficiently secure to answer their purpose. Non-criminal lunatics under observation are detained in jails pending their despatch to lunatic asylums, as, until they are, after observation, certified to be lunatics, they cannot legally be confined in lunatic asylums, and no safe places for their confinement, except the jails, exist. The Inspector-General remarks that they are troublesome inmates, and sometimes by occupying the cells deprive jail officers of the power of punishing convicts by separate or solitary confinement. He proposes that, when a lunatic asylum is near, a non-criminal lunatic under observation should be sent to it rather than to a jail, and draws attention to the delay which generally takes place before orders are passed on applications to Government for the transfer of lunatics. The lunatics are undoubtedly troublesome to deal with, but they would not be less troublesome if confined elsewhere than in a jail. As it is elsewhere noticed in the report

that the number of separate cells in the jails has much increased, while sentences of solitary confinement have much decreased, there cannot, the Lieutenant-Governor would suppose, be much real difficulty in finding suitable accommodation for the few lunatics who are temporarily confined in jails. The detention of lunatics in asylums before they are certified insane would, as already remarked, be illegal. The Inspector-General should at once bring to the notice of Government any case in which there is delay in the issue of orders for the final disposal of a lunatic.

15. The following table shows the expenditure in 1883 and 1884 on major and minor original works and repairs in central, district, and subsidiary jails :—

	1883-84.		1883-84.		1883-84.		1883-84.	
	Major original works.		Minor original works.		Repairs.		Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Central jails	1,37,784	29,553	5,999	1,336	23,283	16,645	1,67,016	47,534
District jails	2,07,577	11,041	18,490	7,948	21,666	24,525	2,47,678	43,514
Subsidiary jails	73,212	14,689	5,798	700	14,019	3,302	93,028	18,001
Total	4,18,523	55,283	30,287	9,984	58,968	44,472	5,07,718	1,09,750

The chief items of expenditure were Rs. 22,064 on the construction of the new central jail at Dacca, Rs. 6,623 principally on warder barracks and water distribution at Buxar, Rs. 2,613 on completion of the new jail at Gya, Rs. 2,585 on water-supply at Darjeeling, Rs. 4,013 on new buildings at Manbhoom, Rs. 3,491 on conversion of the old sub-divisional lock-up into a jail at Khoorna, and Rs. 3,601 on re-roofing the subsidiary jail at Kooshtea. Rupees 50,517 were spent on repairs to jails of all classes and the Reformatory School at Hazaribagh, and Rs. 16,173 on new subsidiary jails at Nowada, Aurungabad, Kurigram, and Contai. Rupees 21,715 were expended on buildings by the Jail Department. The report shows a considerable list of minor improvements still required; but considering the present state of the provincial finances, it is not probable that funds can be soon provided for their completion. The Inspector-General must in the meantime endeavour to make the best use he can of the funds at his disposal in effecting such improvements as are most urgently needed, or are most likely to benefit the health of the prisoners. The daily average number of convicts employed on jail buildings decreased to 1,800 from 2,591 in 1883.

16. All jails, except the Alipore Jail, in which there is a military guard, are now guarded by warders instead of police, and the result is reported to be decidedly satisfactory. Difficulty in obtaining recruits has been most felt in the central jails at Dacca, Rajshahye, Midnapore, and Alipore, and the affiliated district jails. The Inspector-General states :—"I am now trying the experiment of recruiting men in the more popular districts entirely for those less popular, and filling up vacancies in the popular ones by transfers of men who have served for a certain time in those districts which are disliked. I propose similarly to fill the higher grades in the unpopular districts by promotion from the others, in which vacancies would be filled by transfers without promotion." The arrangement is approved, and the Inspector-General should notice the result in his next Administration Report. The Inspector-General submits that an Act drafted on the model of the Police Act V of 1861 is required for jail guards, rendering desertion and certain other offences punishable, and conferring on them legal power to arrest in certain circumstances. He also points out that the pension rules of the police have not yet been generally extended to prison warders. The question of the pay, duties, and status of prison warders is, however, as he remarks, one on which it is not desirable to enter, except as a whole. The Inspector-General should, if possible, submit a report on the general question with his recommendations before the close of the current year. The drill of the warder guards, it is stated, is, as a general rule, very fair. Promotion, leave, and increment of pay have been refused to all officers who have not passed in drill, and there has in consequence been an improvement. A suggestion that breech-loading in lieu of muzzle-loading

arms should be supplied for all guards has not up to the present time been adopted. An estimate of the cost is at present being awaited. There were 3,031 offences committed by warders and head warders during the year, of which 173 were criminal and the remainder breaches of jail rules. Among criminal offences committed by jail officers the chief heading was that of assaults on prisoners, which numbered 64. A chief warder assaulted a prisoner in the Pubna Jail for uncleanness, and the prisoner was removed to the hospital and died from rupture of the spleen. The head warder was on conviction sentenced to rigorous imprisonment for one year. In case of convictions of jail officers by criminal courts for the more serious offences committed by them in violation of their duty, the Inspector-General might with advantage cause notice of the crime, conviction and sentence of the offender to be circulated among the jail officials generally as a warning and deterrent to all. The number of escapes of convicts from jails decreased from 13 to 10, and escapes from subsidiary jails from 19 to 14. There were also eight escapes from jails and 21 from subsidiary jails of under-trial prisoners, and one from the Gya jail of a civil prisoner. In 1883, 24 under-trial and one civil prisoner escaped. The total number of escapes in 1884 was therefore 54. Twenty-six escaped convicts were recaptured during the year, 11 of whom had escaped in former years. Twenty-eight subordinate jail officials were prosecuted to conviction on account of these escapes. The number of jails from which there were no escapes of convicts increased from 37 to 40. The general result was satisfactory. There is, however, still much to be done towards making the subsidiary jails more secure.

17. The Inspector-General has again omitted to notice in his report how far the scheme for the segregation of juvenile offenders and the worst class of habitual criminals by the sub-division of sleeping wards into cubicles has been introduced, or how far it has been generally successful. With regard to the cubicles at the Gya, Durbhunga, and Bhagulpore jails, however, he remarks that the result has not been satisfactory: that a convict by holding his blankets and placing them on the sharp top edge of the corrugated iron partition can easily climb from one cubicle into another, and that it is necessary to make the partitions secure at the top with wire netting, or to continue them up to the roof. An estimate of cost has been submitted, but the work cannot at present be carried out for want of funds. The segregation of the female from the male prisoners is, it is stated, fairly carried out except in subsidiary jails, the present condition of which will be noticed hereafter. Some laxity has been observed in the separation of habitual (B class) from non-habitual convicts. This has been due not to any deficiency of accommodation but to a desire to so organize the labour of the convicts as to make it as remunerative as possible. The rules on the subject of classification of prisoners are now being enforced with more strictness.

18. The number of offences committed by convicts increased from 48,580 to 56,564, and the percentage of offences to the daily average population from 354 to 412. Ninety-one per cent. of prisoners subjected to jail discipline and hard labour committed some offence. The following table shows the number of offences committed by prisoners against the jail rules and the criminal law during the past three years:—

YEAR.	Criminal offences.	Smoking or having possession of forbidden articles.	Offences relating to work.	Other offences against prison discipline.	Total offences.
1882	76	3,604	26,602	18,288	48,570
1883	88	3,020	26,852	18,620	48,580
1884	91	3,250	31,303	21,890	56,564

Thus offences relating to work increased by 4,451 and prison offences other than those relating to work by 3,530. The Inspector-General observes:

"I cannot look on the increase in the number of recorded jail offences as unsatisfactory, and I consider that it only indicates improvement in discipline. It is a subject into which I have enquired very carefully when visiting jails, especially at Bogra, where the number of offences is especially high, and cannot detect any undue severity. The punishments for short work do not indicate excessive tasks beyond the strength of the convicts, because all are weighed every fortnight, and Superintendents are very careful to reduce the task of any man who is found to be losing weight. No offence is entered as a criminal one unless the offender is prosecuted before a court of justice; but a great number of offences punishable under the Penal Code are disposed of by jail officers with whom prosecution is by rule 663 rendered optional. I have in several instances called on Superintendents to explain why they have not prosecuted, and have been informed that the courts show a reluctance to accept the testimony of convicts, and when an offender has once been acquitted by a Magistrate, I think it is objectionable to take up the case again and inflict punishment in jail. * * * I could adduce numerous cases in which it has appeared to me that Magistrates do not appreciate the necessity of maintaining jail discipline, and protecting jail officials, by adequate punishment of crime: and although an assault on a convict warder at Bhagulpore was properly punished with two years' imprisonment, I cannot blame the Superintendent of Bankoora (Jail) for taking up a similar case himself and inflicting 20 stripes." The Inspector-General is probably correct in considering that the detection of a considerably increased number, over 16 per cent., of offences in connection with task work is indicative of improved discipline. In other words it means that year by year more care is taken by the jail officials to measure up work and to scrutinize more and more closely its quality, with the result that in an ever increasing number of instances short or bad work is detected, reported, and punished. No explanation has been given of the increase, over 17 per cent., in the number of other offences against prison discipline, and though this increase may show greater diligence and watchfulness in the discharge of their duties on the part of the establishments, it clearly indicates that no improvement is taking place in the discipline of the prisoners themselves. The increase in offences relating to work was not due to the reduction in the number of prisoners employed in building operations, for at Bhagulpore and Mymensingh the number of jail offences largely decreased, while at Buxar and Dacca it largely increased, though in all four jails the number of men employed on buildings was considerably reduced. The increase occurred in 29 out of 45 jails. It was in the majority of jails not great, and was probably due merely to the fact that the average term of imprisonment generally was shorter, since short-term prisoners are more liable to transgress jail rules and commit faults in their work than those whose terms are longer, and who are familiar with the jail routine. It was in a few jails only that the increase in jail offences was conspicuous. The returns for the Alipore, Buxar, and Dacca jails alone show an aggregate increase of 9,642, or nearly 56 per cent. in the number of offences. The Inspector-General will be requested to explain the special causes of this very large increase. The Lieutenant-Governor notices that in these three jails punishments of solitary confinement with reduced diet were reduced from 1,739 in 1883 to 154 in 1884. Possibly the change in the form of punishment may have been accountable for the increase. Instances are quoted in the report of undue leniency on the part of Magistrates in the infliction of punishment for jail offences. Jail officers, it is true, being most familiar with its details can, as a general rule, best judge of the means most necessary for the effective maintenance of discipline. They should not, however, treat the more serious cognizable offences as simple breaches of jail discipline, merely because those offences are committed within jail precincts. These should properly go to the criminal courts, and the law provides ample remedies if the decisions of those courts are wrong. The Lieutenant-Governor has recently prohibited jail officers from dealing with criminal offences triable only by the Court of Session as offences against prison discipline. It is advisable also to define with more distinctness than at present the other offences which should and should not be dealt with departmentally when committed by prisoners. On this point the recommendations of the Inspector-General will be awaited by Government.

19. The punishments inflicted on prisoners during the last three years are shown in the following statement:—

		By criminal courts.	Solitary confinement.	Reduced diet.	Solitary confinement with reduced diet.	Corporal punishments.	All other punishments.	Total punishments.	Ratio of total punishments to daily average number of prisoners.	Ratio of corporal punishments to total number of all others inflicted on male prisoners.
1882	...	70	3,067	5,067	3,098	416	36,827	48,574	328.18	0.88
1883	...	77	3,861	2,305	2,347	349	40,170	48,509	351.72	0.74
1884	...	85	3,088	3,973	822	345	47,945	60,358	412.91	0.63

Thus, while sentences of solitary confinement increased by 427, sentences of solitary confinement with reduced diet decreased by 1,825. On the other hand, sentences of reduced diet alone increased by 1,608. Sentences of reduced diet thus in the aggregate decreased by 217. The ratio per cent. of corporal punishments to the total number of all other punishments inflicted on male prisoners again decreased. From the statements appended to the report under review, and to those of previous years, it is obvious that the method of inflicting the different forms of punishment authorized by the code varies considerably in different jails, and even in the same jail from year to year. This remark does not, however, apply to corporal punishments, which are generally only inflicted in extreme cases, and the number of which has of late years steadily declined. No reason has been ascertained as accounting for these variations, and the Inspector-General has apparently not noticed them; yet they are in cases very considerable, and an instance is noticed in the preceding paragraph. It is unsatisfactory to find that the punishment of placing prisoners on reduced diet—a form of punishment which the Local Government has discouraged—decreased by less than five per cent., while sentences of solitary confinement decreased by nearly 25 per cent. So long as the relaxations prescribed by the code, which distinguish separate confinement for prison offences from solitary confinement under the Indian Penal Code, are properly allowed, this form of punishment is at once non-detrimental to health and deterrent in its effects. The Inspector-General states that, in his opinion, the reaction against flogging has gone too far. This subject was fully discussed in the Resolution on his report for 1883, and until such method is introduced in the infliction of jail punishments generally that deductions of some value can be made from the results, the Lieutenant-Governor is not inclined to change the opinion he then expressed.

20. With a daily average of 13,206 male and 491 female convicts, 773 male and 7 female convicts were on the average employed as prison officers. The convict prison officers, none of whom are habitual criminals, have been found useful and trustworthy. It is suggested that in a special case, when the convict has behaved well for a long period in jail, an habitual criminal might be appointed a prison officer. Any such special case may be recommended by the Inspector-General for the consideration of the Local Government.

21. The average remission gained under the mark system by prisoners sentenced to various terms of imprisonment, from two years and upwards, generally increased. The Inspector-General on this subject remarks: "The general increase in the amount of remission earned should be considered with the number of punishments inflicted, as showing that the number of convicts punished for short work is not inconsistent with the earning of full marks by such as are industrious." Marks are, however, not deducted as a punishment for offences relating to work alone, and such offences formed but a small portion of the offences for which marks can as a punishment be deducted. The probable explanation of the rise in the average of remissions under the mark system, coincident with an increase in jail offences, is that the majority of those who committed the offences were imprisoned only for short terms and did not come under the mark system at all. As those who earned remissions must have been originally sentenced to at least two years' rigorous imprisonment, they must have entered the jail and become habituated to the rules before the increase of prisoners in 1884 began. The result probably shows a better appreciation by

the long term prisoners of the benefit of good conduct while in jail. The whole question of the system of granting remission of sentences by the award of marks is now under consideration, and the Lieutenant-Governor will deal with it in communication with the Government of India.

22. The total expenditure, exclusive of the amount spent by the Public Works Department as already noticed, increased from Rs. 10,32,695 to Rs. 10,56,490, and was greater than in any of the preceding three years. The increase was chiefly under the heads of general supervision, diet, and clothing of prisoners, and petty construction and repairs. There was some saving under the heads of establishment, hospital charges, miscellaneous contingencies, and stationery. The daily average population of all classes increased only from 15,026 to 15,101; the average expenditure per prisoner in jails of all classes from Rs. 68 11-7 to Rs. 69-15-4. The total increase in the cost of diet amounted to Rs. 40,864, and was due chiefly to increase in the price of grain and pulse used as food. The variation in the prices of dāl and meat was slight, and that in the price of fish was considerably less. The diet of the prisoners was constantly altered or varied as their health appeared to require. The five jails in which the average expenditure per prisoner for diet, compared with that in the year 1883, was highest were—

		1884.			1883.		
		Rs.	A.	P.	Rs.	A.	P.
Presidency (European)	...	85	2	1	98	6	4
Darjeeling	...	35	3	0	34	3	1
Lohardugga	...	31	0	0	26	0	0
Hazaribagh	...	29	6	6	24	9	4
Mozufferpore	...	28	13	6	23	7	6

And the five in which this expenditure was lowest were—

		Rs.	A.	P.	Rs.	A.	P.
Nuddea	...	19	6	6	23	13	5
Bhagulpore (District)	...	18	15	11	17	5	9
Singbhoom	...	18	4	4	16	15	7
Pooree	...	15	8	1	15	15	4
Manbhoom	...	16	5	9	15	5	7

Throughout the year, it is stated, any indication of general loss of health, such as decrease in weight, sickly appearance, or increase in the number of prisoners admitted to the hospital, was met by improvement in the food; there was a consequent decrease in the expenditure on hospital charges corresponding to an increase in the cost of diet incurred by order of medical officers. If this statement be accepted as correct—and the Lieutenant-Governor sees no reason to doubt its correctness—the result could hardly be more satisfactory.

23. The expenditure on establishment of central and district jails decreased from Rs. 4,06,847 to Rs. 3,88,181, owing to reductions in establishment and salaries of some officers. The average cost per head of sick in hospital was Rs. 54-13-9 against Rs. 55-13-2 in 1883. The rise in the expenditure on clothing was apparently due merely to postponement of expenditure in the previous year. It is observed that jailors are very fond of postponing expenditure on necessary clothing till after the close of a year, so as to show economical management. This practice should be at once discontinued. The savings under the head of contingencies were due chiefly to the absence of any extraordinary demand.

24. The average number of prisoners sentenced to labour on working days slightly increased from 13,494-80 to 13,521-78. Of these, 2,136 were employed as prison officers or servants, 716 in gardening, 477 in preparing articles for prison use, 350 in jail repairs, 1,449 on jail buildings, either under the Superintendent or Public Works Department, and 6,478 on manufactures. The only case in which any of the prisoners were employed on extramural labour was at Noakhally, where 120 convicts were hired out to the municipality in order to repair the dispensary buildings after the cyclone of November. The increase in the number of prisoners employed on jail manufactures was due to the large number who were relieved from work on jail buildings, and for whom it was necessary to find other employment.

prisoners are as a rule healthy. The percentage of deaths was during the year much below that of prisoners confined in the other jails. The Lieutenant-Governor requests that the Inspector-General will, when inspecting a jail, invariably inspect the under-trial ward attached to it, and ascertain whether the food, clothing, and general health of the prisoners confined in it are properly attended to. He particularly wishes the Inspector-General to ascertain whether the state of bad health in which prisoners are received into jail after sentence is in any way due to their treatment while in the under-trial wards. The Inspector-General is requested to notice this subject in detail in his report for the current year.

28. The expenditure for subsidiary jails of the province during the years 1883 and 1884 is shown in the following table:—

Average number of prisoners ...	1883.			1884.		
	Gross.	Average per prisoner.		Gross.	Average per prisoner.	
		Rs.	Rs. A. P.		Rs.	Rs. A. P.
Rations ...	13,327	19	13 8	16,907	22	13 4
Establishment ...	47,420	70	4 9	47,972	64	9 0
Hospital ...	176	0	4 1	156	0	3 4
Clothing ...	253	0	6 0	800	0	6 5
Second class public works	4,183	6	3 1	4,501	6	0 11
Miscellaneous contingencies	12,315	18	3 10	13,532	18	3 6
Total ...	77,688	115	0 5	83,363	112	3 5
Public works ...	93,029	137	13 1	18,601	25	2 5
Grand Total ...	1,70,712	252	13 6	1,02,059	137	5 9

The increase in expenditure, exclusive of public works, was chiefly due to the rise in the price of food-grains, and the charges on opening three new subsidiary jails. The decrease in expenditure by the Public Works Department amounted to Rs. 74,338. Manufactures produced a profit of Rs. 2,399 compared with Rs. 2,297 in 1883.

29. In the Resolution on the report for 1883, it was observed that the vital statistics for the first time since 1878 showed a great and decided improvement, and it is with pleasure Sir Rivers Thompson has to record that the improvement was maintained during the year under review. The following table shows the sickness and mortality in Bengal jails since 1865 of all convicts and under-trial prisoners:—

	Daily average number of prisoners.	Daily average sick.	Ratio per mille of daily average sick.	NUMBER OF DEATHS			DEATH-RATES PER MILE OF AVERAGE STRENGTH		
				From cholera.	From all other causes.	Total number of deaths.	From cholera.	From all other causes.	From all causes.
1863 ...	16,465	647	51.4	539	1,223	1,561	29.5	71.3	99.4
1864 ...	16,729	814	48.6	231	804	1,035	13.8	4.0	61.5
1865 ...	17,439	750	43.3	162	799	961	9.2	45.3	54.5
1866 ...	20,683	746	54.5	684	1,559	2,223	33.0	7.0	167.0
1867 ...	18,733	668	35.6	162	916	1,078	9.0	49.0	58.0
1868 ...	18,061	646	35.7	122	802	924	7.0	43.0	51.0
1869 ...	18,476	676	36.5	176	771	947	9.0	4.0	51.1
1870 ...	18,546	623	33.5	171	659	830	9.0	36.0	45.0
1871 ...	17,500	636	36.3	84	661	669	2.9	38.0	41.0
1872 ...	19,105	673	35.3	117	885	1,002	6.0	46.0	52.0
1873 ...	20,142	649	34.2	124	832	956	6.0	41.0	47.0
1874 ...	21,569	782	36.2	145	1,027	1,172	7.0	47.0	54.0
1875 ...	21,257	835	39.2	96	948	1,045	4.9	45.0	49.0
1876 ...	21,672	949	39.1	267	976	1,242	12.3	45.0	57.3
1877 ...	18,700	730	39.0	151	763	914	8.0	46.8	48.8
1878 ...	18,611	803	43.1	215	1,072	1,287	11.5	57.6	69.1
1879 ...	18,483	947	51.2	561	1,411	1,752	14.4	76.4	94.8
1880 ...	17,802	941	52.8	31	1,100	1,131	1.7	61.8	63.5
1881 ...	16,520	875	52.8	85	1,014	1,099	5.1	61.4	67.5
1882 ...	15,902	840	52.8	151	983	1,084	9.5	68.1	68.1
1883 ...	14,770	729	49.3	61	791	762	4.1	47.4	55.5
1884 ...	14,908	724	48.6	62	678	740	4.1	45.6	49.7
Total ...	402,030	16,536	41.8	3,934	20,546	24,430	9.7	51.0	60.7
Average ...	16,274	765	41.8	178	932	1,110	9.7	51.0	60.7

The ratio per mille of daily average sick was 6.8 above the average, but the ratio of deaths from all causes was below the average by 11 per mille. On the improvement in health of the prisoners, the Inspector-General observes: "The figures of 1883 showed that the measures which had been taken for maintaining the inmates of our jails in good health had not been in vain, and

those now given are equally satisfactory. Precautions have been taken to prevent overcrowding and to provide the best water that can be obtained, though in both these directions much more might be done if funds were available. An admirable system of dry-earth conservancy has been maintained, excreta being guarded with pulverised clay and buried in trenches * * *. Prisoners were weighed every fortnight, and if loss of weight indicated any deterioration of health, tasks were reduced and diet improved without consideration of expense. Warm and sufficient clothing was supplied. Medical officers have been allowed full liberty to act as they considered necessary for the health of prisoners, and there has been a corresponding improvement, sickness and mortality having decreased." While confident that these sanitary measures will be maintained, the Lieutenant-Governor does not feel assured that the improvement in the health of the prisoners is altogether due to them, or that the improvement will progress in future years through these means. Those measures were in force during some of the late years in which the sickness and mortality of the prison population was excessive, and the health of the prisoners in 1884 was, according to the statistics, actually worse than in 1875. Until a more exact knowledge is obtained of the state of health of the outside population, it must always be difficult to judge how far the health of prisoners in jails in any particular year is affected by general causes exterior to the jails and how far by the measures taken for its improvement within them. Again, there are many causes predisposing to sickness, *e.g.* exposure to cold and damp in insufficient clothing, improperly cooked food, exposure to the sun, overcrowding in workshops, and the like, against which no measures taken by Government or the Inspector-General can adequately provide without the help of careful and intelligent supervision by Superintendents of Jails. Now that so much has been done in the way of providing improved accommodation, good water, ample food and sufficient clothing for our prisoners, Sir Rivers Thompson thinks that unremitting watchfulness and care on the part of these officers will have more effect in reducing the sickness and mortality in jails than any further measures which the Government can adopt.

30. The death-rate per mille of convicts in jails was 50·9; in subsidiary jails 27·7; of under-trial prisoners in jails 46·0; and of those in subsidiary jails 35·2. The health of prisoners in subsidiary jails was considerably better than that of prisoners in the larger jails. The following statement shows the principal diseases from which convicts suffered, the number of deaths from each disease, and the ratio per mille of deaths and admissions in 1883 and 1884:—

	Number of admissions into hospital.		Number of deaths.		Ratio per mille of deaths to admissions.	
	1884.	1883.	1884.	1883.	1884.	1883.
Dysentery and diarrhoea	7,061	6,850	271	299	38·3	43·6
Intermittent fever	6,249	7,651	49	50	7·8	6·6
Anæmia and general debility	683	798	70	63	101·0	77·6
Remittent and continued fever	629	454	25	27	39·7	59·4
Respiratory diseases	558	711	63	78	113·3	109·7
Ulcer and boil	548	502	3	1	5·4	1·6
Scrofula and phthisis pulmonalis	140	158	46	55	328·6	348·1
Cholera	99	111	56	53	565·6	477·4
Jaundice	53	32	6	1	113·3	31·3
Small-pox	27	3	4	3	148·1	375·0
Other fevers	27	25	3	74·0

31. The statistics show but little change in the force of the prevailing diseases. The prisoners, as usual, suffered most from dysentery, diarrhoea, fever, general debility, and respiratory diseases. As usual, stress is laid in the report on the effect produced on the death-rate by the wretched state of health in which prisoners were admitted to jail. A large proportion of deaths occurred among prisoners who were admitted to jail in such bad health that they were never really subject to prison discipline. In seven jails, *viz.* Rungpore (283·4), Julpigoree (162·6), Mymensingh (153·0), Bogra (134·5), Purneah (115·3), Rajshahye (110·8), and Singhbhoom (102·2), the death-rate from all causes exceeded 100 per mille. Of these only three, *viz.* the Rungpore,

25. The following table shows the net cash earnings of convicts sentenced to labour in the years 1883 and 1884 :—

	1883.			1884.		
Average number of prisoners sentenced to labour ...	13,494	80		13,521	78	
Ditto employed on jail manufactures ...	5,847	26		6,478	18	
	Rs. A. P.			Rs. A. P.		
Cash balance on manufacturing accounts in hand, 1st January ...	2,972	14	0	3	8	0
Cash drawn on manufacturing accounts during the year ...	7,83,027	9	0	7,10,689	6	0
Total debits ...	7,86,000	7	0	7,10,692	14	0
Paid into treasury on manufacturing account ...	10,75,554	7	0	9,97,190	12	0
Cash balance on 31st December ...	3	8	0	19	15	0
Total credits ...	10,75,557	15	0	9,97,210	11	0
Cash earnings ...	2,89,557	8	0	2,86,517	13	0
Average earning per head on average number sentenced to labour ...	21	7	0	21	3	0
Average earning per head on average number employed in jail manufactures	49	8	0	44	4	0

The net cash earnings according to this statement, which is in the form prescribed by the Government of India, decreased only by Rs. 3,039-11-0; the average earning per head of prisoners sentenced to labour from 21-7 to 21-3, and of prisoners employed in jail manufactures from 49-8 to 44-4. Taking into account credits and debits on account of manufactured articles, raw materials, outstanding bills, plant and machinery and remittances by cash and invoice, the Inspector-General calculates the profits at Rs. 2,98,273, showing a decrease of Rs. 41,674 as compared with the results in 1883. The decrease is attributed in the report partly to the orders of the Government of India discouraging jail manufactures, and partly to a general depression of trade. It is true that, pending final decision of the question of jail manufactures, extension and improvements in them have been checked; but the diminished profits are, the Lieutenant-Governor believes, almost entirely due to general trade depression. At the Presidency Jail there was full employment throughout the year, and the decrease in the average earning per prisoner was only nominal. The gunny-bag industry at Alipore suffered with the outside market. At Hazaribagh the industries, with the exception of that of aloe fibre, practically ceased to exist. On the other hand, the cotton and tent-making industries at the Buxar Jail, and the castor-oil pressing at the Rajshahye Jail, showed improved results owing to the special attention paid to them, and to a larger demand by the State. Slight additions were made to the machinery at the Presidency, Alipore, Bhagulpore, and Buxar Jails. With regard to the difficulty experienced in finding for convicts in the smaller district jails work that is at once laborious and remunerative, the Inspector-General observes: "I consider that it is better that an able-bodied convict should be unremuneratively employed on shot drill, tread-mill or crank than that the sentence of hard labour implied in rigorous imprisonment should not be enforced; and I look on the question of profit as a very secondary one when compared with that of prison discipline." While agreeing in the abstract with the general principle laid down by the Inspector-General, the Lieutenant-Governor considers that his views are not applicable to the Bengal jails in their present state. That the present system of prison discipline is already sufficiently deterrent to criminals is conclusively proved by the large decrease in the number of criminals admitted for the last nine years, while the weakly physical condition of much of the convict population renders it impossible for one moment to entertain any idea of applying to them the severe forms of penal labour employed in European jails. To an Indian convict, labour of a kind to which he is not used, which he has to perform in a posture other than

that which alone habit has made comfortable to him, and which demands his sustained attention, is severe, penal, deterrent from crime and sufficiently disciplinary. The Lieutenant-Governor cannot think of allowing to be substituted for it any form of severe and merely punitive exercise, probably injurious to the health, and having a certainly deadening influence on the faculties of the convict.

26. Owing to the reduction of the status of the Baraset district jail to that of a subsidiary jail, and to the opening of two new subsidiary jails at Soopool in Bhagulpore and Gopalgunge in Sarun, the number of subsidiary jails increased from 81 to 84. The general management of these jails was in the hands of the sub-divisional officers as Superintendents, the civil hospital assistants acting as Deputy Superintendents under them. It is stated in the report that the majority of Superintendents do not, in the Inspector-General's opinion, do their duty in respect of these jails. An extract from the remarks of the Inspector-General will be sent to Magistrates of districts, who will be requested to see that the sub-divisional Magistrates subordinate to them attend with more regularity to their duties as Superintendents. The proper minimum number of visits which a sub-divisional officer should pay to a subsidiary jail during the year is 77, viz. eight fortnightly visits during his four months' tour, and 69, or two every week, during the remaining eight months of the year. Out of the whole number of subsidiary jails, 54 were visited 70 times or more in the course of the year against 45 in 1883. There was thus a slight improvement in inspection. Full explanations will be asked from the Superintendents of the Diamond Harbour, Kooshtea, Contai, Buxar, Gopalgunge, Nya Doonika, Kurseong, Rampore Hat, Ghatal, Attia, Kishoregunge, Angool, and Khurda subsidiary jails as to the reason of the small number of inspections made by them.

27. The total number of prisoners admitted direct to subsidiary jails was 28,625 against 25,606 in 1883, and the daily average increased from 674.53 to 743. Of convicts 14,519 were admitted, and their daily average number was 288.16. In 1883 the corresponding figures were 13,209 and 264.72 respectively. The increase was due to the causes already noticed, which affected the jail population generally. Deaths among the convicts decreased from nine to eight, and escapes from six to three. The average period of detention of convicts was 7.08 days. The number of under-trial prisoners admitted during the year was 13,681 or 1,865 more than in 1883, and the daily average increased from 407.32 to 454.21. Six of them escaped and 16 died. In six subsidiary jails, viz. Attia, Kishoregunge, Ghatal, Bhola, Bishenpore, and Kurigram, the average period of detention of under-trial prisoners exceeded 20 days. The sub-divisional officers concerned will be called upon to give explanations. Thirty-one civil prisoners were, it is stated, admitted to subsidiary jails. As no subsidiary jail has, so far as the Lieutenant-Governor is aware, been declared a place for confinement of civil prisoners, an explanation will be called for on this point. Thirty-seven prisoners of all classes escaped, 23 being under-trial and 14 convict prisoners. Sixteen of these escapes are ascribed to insecurity of the jail buildings, and the rest to negligent guarding. It has been proposed to surround many of the least secure of the subsidiary jails with enclosure walls of brick masonry, and the Lieutenant-Governor has in some cases sanctioned this being done. At present, however, there are no funds available for carrying out the proposed improvements. The state of the warder guards at subsidiary jails is reported to have been unsatisfactory, their discipline lax, and their supervision neglected. The attention of the Inspector-General having been drawn to this subject, the Lieutenant-Governor hopes that he will be able to effect improvements in the course of the current year. The number of offences shown as committed by the prisoners was only 65. The discipline of the prisoners in the subsidiary jails is lax, and full task work is not exacted from them. There should, however, be no difficulty in exacting hard labour and regular task work (such as wheat-grinding, paddy-husking or cleaning of aloe fibre) from the convicts, the daily average number of whom in a subsidiary jail was only 3.5 during the past year. The time during which a convict is confined in a subsidiary jail is very short, and if he is allowed to be idle, he is practically exempted from real punishment. The

Julpigoree, and Bogra jails, appeared in a similar list of seven last year. Out of 59 deaths at Rungpore, 33 were due to bowel-complaints and 5 to fever. At Julpigoree there were 17 deaths, ten being due to bowel-complaints and two to cholera. At the Mymensingh jail out of 53 deaths, 33 were due to bowel-complaints. The other jails suffered in a similar manner. At Rajshahye there were 78 deaths, of which 11 were caused by cholera. The subject of the high rate of mortality in the jails in Eastern Bengal has been repeatedly considered by the Lieutenant-Governor in the Resolutions on the reports of former years, and he has nothing to add to the conclusions at which he has arrived, viz. that the primary cause of mortality is the diseased condition of the low class of people to which the prisoners generally belong, and that no known preventible causes exist in the jails. Every sanitary precaution has been and will continue to be taken for preserving the health of the prisoners, and although this has not been hitherto always attended with decided success, the Lieutenant-Governor still hopes that with perseverance, and by utilizing the knowledge obtained from special inquiries, a real improvement is gradually being effected in the health of the prisoners.

32. The Inspector-General inspected the eight central jails, 30 out of the 37 district jails and 20 of the subsidiary jails. The general management of all the central and most of the district jails is reported to have been satisfactory. Explanations will be called for from the Magistrates of districts who failed to pay weekly visits of inspection to district jails. Among them are the Magistrates of Nuddea, Chittagong and Sarun, whose shortcomings in this respect were noticed in the Resolution on the report for 1883. Dr. Lethbridge was Inspector-General of Jails until 22nd March 1884, when he went on furlough. He was succeeded by Mr. E. V. Westmacott, c.s., who has since remained in charge.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Secretary to the Government of Bengal.

LONDON EXHIBITION OF 1886.

The 11th August 1885.—The following extract from a letter from C. S. Bayley, Esq., Under-Secretary to the Government of India in the Revenue and Agricultural Department, to the Government of Bengal, bearing No. ^{227 Ex.}₇₉₋₃, dated the 18th July 1885, is published for general information.

H. H. RISLEY,

Offg. Secy. to the Govt. of Bengal.

“In continuation of Mr. Buck’s letter No. ^{1002 Ex.}₇₉₋₁, dated the 23rd June 1885, I am directed, in order to prevent possible misapprehension, to explain that the Government of India, in inviting the assistance of the Government of Bengal and of the Mercantile Community of the Province, in the prominent representation of the principal commercial products of Bengal at the Colonial and Indian Exhibition, has no intention of imposing expenditure on Provincial Funds. It will therefore be prepared to meet any necessary expenditure which may be incurred in giving effect to these proposals. At the same time, as the funds at the disposal of the Revenue and Agricultural Department are limited, the Government of India will gladly accept any contributions of samples which Merchants or local Institutions may desire to offer.”

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 15th August 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Aug. 15 '85	3.33	Weather—hot and cloudy. Prospects of crops good. Price of rice 11½ to 14½ seers per rupee. Health generally good.
	2 Culna " 15 "	1.88	
	2 Bankoora, " 15 "	1.40	Weather—seasonable. Transplanting of paddy is nearly over; weeding operations are in rapid progress. Crops look very promising everywhere. Public health good.
	3 Bishenpur " 15 "	1.81	
	3 Beerbhoom, " 15 "	0.95	Weather—cloudy with occasional showers. Fair progress made in transplanting paddy. Much remains to be done in the Rampore Haut sub-division, the rainfall there being uneven. No material change in average prices. Cholera persistent.
	4 Rampore Haut " 15 "	2.53	
	4 Midnapore, " 15 "	3.48	Weather—seasonable. Much damage has been caused by floods in the Ghatal sub-division. Elsewhere prospects are generally fair.
PRESIDENCY DIV.	5 Hooghly, " 15 "	1.21	Weather—seasonable on the whole. Excessive rainfall in parts of the district, and unfavourable reports come from the Jehanabad sub-division. <i>Aus</i> is being reaped in places, and is a good crop. <i>Amun</i> rice is still being transplanted. A few cases of cholera in Serampore.
	5 Serampore " 15 "	2.50	
	5 Jehanabad " 15 "	7.18	
	Howrah, " 15 "	1.20	Weather—rainy. <i>Amun</i> rice doing well. Heavy floods in the Rupnarayan and Damodar have submerged some land, and have done some injury. Public health fair.
	5 Oolooberiah " 15 "	3.17	
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, Aug. 15 '85	1.84	Weather—seasonable. Prospects of early crops continue satisfactory. Transplanting of <i>amun</i> is going on, but more rain is wanted. Public health generally good.
	7 Nudda, " 15 "	1.33	Weather—hot. Early rice is being harvested. More rain is wanted for <i>amun</i> .
	7 Kushitea " 15 "	0.24	Manufacture of indigo is proceeding fairly.
	7 Meherpur " 15 "	3.12	
	7 Chundanga " 15 "	1.79	
	7 Ranaghat " 15 "	4.81	
	8 Khoolna, " 15 "	0.78	Weather—cloudy with light rain. <i>Aus</i> paddy is ripening; ploughing and transplanting of <i>amun</i> paddy continues. Public health good.
	9 Jessore, " 15 "	1.95	Weather—seasonable. Harvesting of <i>aus</i> paddy continues; prospects good. <i>Amun</i> paddy doing well. Transplanting going on rapidly. Health fair.
	9 Jhenida " 15 "	0.66	
	9 Magoora " 15 "	2.31	
RAJSHAHY DIV.	10 Narail " 15 "	1.58	
	10 Bongong " 15 "	4.74	
	10 Moorshedabad, " 15 "	4.15	Weather—seasonable. Prospects of <i>amun</i> rice are now fairly good. Transplanting in rapid progress. <i>Aus</i> will be a good crop, but in dearah and low lands it has been greatly injured, if not destroyed, by the high flood of the Padma. Public health fair. Price of common rice from 11 to 13 seers per rupee.
	10 Lalbagh " 15 "	2.58	
	10 Kandli " 15 "	2.10	
	10 Jungipore " 15 "	2.27	
	11 Dinagepore, Aug. 14 '85	4.28	Sufficient rain. State and prospects of jute and <i>bhadoi</i> rice are good. <i>Bhadoi</i> and jute are being harvested in places; a good outturn is expected. Cultivation of late paddy is going on well. Rice is selling at from 13 to 18 seers per rupee.
	12 Rajshahye, " 15 "	0.57	Weather—hot and cloudy. Harvesting of <i>aus</i> paddy has commenced in the Natore sub-division. Prospects of <i>amun</i> , jute, and sugarcane fair. Transplanting of <i>amun</i> is still in progress. General health fair. A little cholera reported from Tanore and Godaguri.
	12 Natore " 15 "	2.10	
	12 Nowgong " 15 "	3.79	
RAJSHAHY DIV.	13 Rungpore, " 15 "	3.85	Weather—rainy in the beginning of the week, last three days hot and rainless. Harvesting of <i>aus</i> and transplanting of <i>amun</i> still going on. Sugarcane and other crops doing well. Rain wanted in Kurigram. Cutting of jute has commenced.
	13 Nilphamari " 15 "	4.41	
	13 Kurigram " 15 "	0.93	
	13 Gaibanda " 15 "	0.96	
	14 Bogra, " 15 "	1.02	The week has been comparatively a dry one and the heat was greater. Two shocks and a few tremors of earthquake occurred. Prospects of crops continue to be favourable. Reaping of <i>aus</i> has begun. Public health fair.
	15 Pubna, " 15 "	1.39	Weather—cloudy and hot. <i>Aus</i> is being cut with a very good outturn. <i>Amun</i> looks well everywhere, and prospects of jute are good.
	15 Serajgunge " 15 "	1.97	
RAJSHAHY DIV.	16 Darjeeling, " 15 "	8.13	Weather—wet and warm. State and prospects of crops excellent. Fever prevalent in the Terai.
	17 Julpigoree, " 15 "	4.51	Weather—alternate rain and sun. Prospects continue good. Transplanting of <i>haimanti</i> rice still continues. Crops look very well everywhere. Cholera has appeared at Buxa.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>conold.</i>			
<i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, Aug. 15 '85	0.69	Weather—seasonable. <i>Aus</i> paddy and jute being harvested. Sowing of <i>aus</i> paddy has commenced. Water gradually rising. Prospects of crops and public health good.
	Manickgunge	1.98	
	Munshigunge	1.97	
	Naraingunge	1.68	
	19 Farreedpore, „ 15 „	0.45	Weather—seasonable. Crops on the whole good. <i>Aus</i> and jute are being rapidly harvested.
	Goalundo	1.55	
	Madaripore	1.43	
	20 Backergunge, Aug. 13 „	1.13	Weather—seasonable. Harvesting of <i>aus</i> crop has not yet been finished. Transplanting of <i>aman</i> going on. General health good.
	21 Mymensingh, „ 14 „	0.93	Weather—seasonable. A slight shock of earthquake on the 10th instant. State of crops good. <i>Aus</i> paddy and jute commenced to be harvested. Public health good.
	Jamulpur	1.23	
CHITTAGONG DIV.	Kishoregunge	1.11	
	Attia	1.95	
	Netrokona	0.91	
	22 Chittagong, Aug. 18 '85	1.20	Weather—cloudy with occasional rain. Transplanting of <i>aman</i> continues. Prospects continue fair. Prices somewhat high. Public health good.
	23 Noakholly, „ 14 „	3.78	Weather—rainy almost throughout the week. Harvesting of <i>aus</i> crops not yet completed. Transplanting of <i>aman</i> continues. Public health pretty good.
	Fenny	5.68	
	24 Tipperah „ 13 „	2.82	Weather—bright sunshine with cool breeze. Transplanting of late rice is proceeding briskly. Rain is wanted for the young seedlings. Public health generally good, with the exception of a tract in the Muradnagar thana which is suffering much from malarious fever.
	Brahmanbariah	0.44	
	Chandpore	1.85	
	25 Chittagong Hill „ 11 „	1.73	Weather—very hot during the latter part of the week. Rain badly wanted. <i>Joom</i> paddy is ripening; but reports regarding crops in vicinity of Chongra river unfavourable. Cotton and sugarcane doing well. Fever very prevalent.
PATNA DIV.	Hill Tipperah, „ 12 „	0.72	Weather—hot; more rain is wanted. <i>Aman</i> paddy is being transplanted. Prospects of <i>joom</i> crops fair. Public health good.
	26 Patna, Aug. 15 '85	5.7	Weather—hot and cloudy. <i>Bhadai</i> crops promise well except on dearah lands, where the rise of water has destroyed them in some places. Transplanting of paddy seedlings going on. Sporadic cholera reported from Barh, Behar and Sudder sub-divisions.
	Barh	5.35	
	27 Gya, „ 15 „	0.89	Weather—cloudy and cool. <i>Bhadai</i> promising; transplanting of paddy going on. A few cases of cholera reported from the Nowada sub-division. Prices stationary.
	28 Shahabad, „ 15 „	1.44	Weather—fair and cloudy alternately. Rainfall sufficient for transplanting of rice seedlings, and operations progressing briskly. Prospects of crops favourable, except in parts adjoining the Ganges, where the <i>bhadai</i> has been destroyed by inundation. Cholera reported from the interior, and has appeared in Arrah.
	Buxar	9.18	
	Nasseram	7.12	
	Bhabhua	3.55	
	29 Durbhanga, „ 15 „	2.77	Weather—cloudy. Transplanting of paddy is in progress, but more rain is wanted. <i>Murea</i> , <i>makai</i> , <i>shama</i> and <i>kauni</i> are coming into ear. Manufacture of indigo has commenced. Prices stationary. Public health good, except a few cases of cholera reported from Madhubani.
	30 Mozufferpore, „ 15 „	3.1	Heavy showers and strong sun have alternated. All crops continue in excellent condition. <i>Maize</i> coming into ear. Transplanting of rice in progress. Cholera on the whole has diminished.
BHAULPORE DIV.	Hajipur	8.08	
	31 Sarun, „ 15 „	4.24	Weather—fair with occasional clouds and rain. Prospects of <i>bhadai</i> crops good, except where swamped on dearah lands. Manufacture of indigo (first cutting) nearly completed with fair outturn. Transplanting of paddy seedlings going on briskly. Cholera of a virulent form in the Chapra town (where special sanitary measures are being taken), and cases, more or less severe, reported from other places in the interior.
	Sewan	11.28	
	Gopalgunge	5.77	
	32 Champaran „ 15 „	6.29	Weather—cloudy with easterly wind. Prospects of <i>bhadai</i> and <i>aghani</i> crops favourable. Some damage has been done to crops by floods from the Sikraha and from several hill streams. Prices stationary. Cholera still prevails in an epidemic form in Motihari town and in several parts of the interior.
	33 Monghyr, Aug. 15 '85	2.10	Weather—hotter towards the end of the week. The sudden rise of the Ganges has caused damage to the Indian-corn on the dearah lands, otherwise prospects good. Transplanting of the <i>aghani</i> is being rapidly pushed on. Prices steady. Cholera continues.
	Begusarai	3.29	
	Jamai	4.13	
	34 Bhagulpore, „ 15 „	4.48	A long period of continuous wet weather has been succeeded by sunshine during last three days. Great damage has been done to the <i>janera</i> crop by floods of the Ganges in the Sudder sub-division, and some damage in Banka by excessive rain; otherwise prospects in the south are very good. More rain is wanted for transplanting rice in the north, where the crop is suffering from insufficient rain. A great deal of cholera in Banka and in thanas Sultangunge and Colgong.
	Mudehpurah	2.17	
BHAULPORE DIV.	Banka	3.25	
	Soopole	2.41	
	35 Purneah „ 15 „	2.49	Weather—showery. <i>Bhadai</i> crops good; more rain required for transplanting <i>aghani</i> rice. Ganges and Kosi in flood. Crops damaged in Manihari. Health fair.
	Kisengunge	3.60	
	Arrareah	1.52	
	36 Maldah „ 15 „	2.71	Weather—cloudy and showery, and close alternately. Most of the <i>bhadai</i> crop on low dearah lands has been destroyed by inundation. The high land crop will be very good in parts of the district, and prospects fair throughout. <i>Haimanti</i> prospects continue good. Public health fair.
	Gazole	2.86	
	Shibgunge	2.01	
	37 Sonthal Pergas, „ 15 „	1.20	Fair sunshiny weather since the 12th. Prospects of paddy crops everywhere excellent. <i>Janera</i> is backward, but best where it is most wanted. Floods in Rajmehal have done some damage. Prices remain steady. Cholera still very prevalent.
	Deoghur	2.69	
	Godda	3.97	
	Rajmehal	3.23	
	Jantera	3.22	
	Pakoor	2.38	

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, Aug. 14 '85	1.87	Weather—cloudy and hot with occasional scanty rainfall. <i>Beali</i> is ripening and in some places is being cut. <i>Sarad</i> is growing well, but requires more rain. Rice is selling at 15 seers per rupee. Cholera continues in the town and in different places in the interior.
	39 Poores, " 13 "	1.39	Weather—hot and cloudy with occasional showers. Transplanting, puddling and weeding of paddy are in progress. Harvesting of early rice has begun in some parts of the district. Common rice is selling at an average of 18 seers 15 chittacks per rupee in the Sadler, and 18 seers 3 chittacks in the Khourda sub-division. Cholera continues in some localities; otherwise general health fair.
	Khourda " " "	3.03	
	40 Balasore " 14 "	1.47	Weather—cloudy with occasional showers. Puddling and transplanting going on vigorously throughout the district except in some places in the Agarpara, Dolsahi and Dhamnagar chaklas in the south, where more rain is wanted for transplanting. Public health generally good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
	41 Hazaribagh, Aug. 14 '85	0.69	Weather—seasonable. Sufficient rain reported from all parts of the district. State and prospects of crops good. Transplanting of rice almost completed. Cholera very prevalent.
	42 Lohardugga, " 15 "	0.59	Weather—seasonable. Weather with occasional breaks of sunshine has been favourable for agricultural operations. Transplanting continues. Prices stationary. Cholera broken out in several villages of the Ranchee and Mandar thanas.
	43 Singbhoom, " 14 "	3.30	Weather—seasonable rain. All crops doing well. Prices easy. General health good.
	44 Manbhoom, " 15 "	0.81	Weather—hot with showers. Transplanting of rice nearly finished. Prospects of crops generally good. Public health good.
	Govindpore " " "	3.11

The total number of hours of bright sunshine

The maximum possible number of hours of sunshine

The mean temperature of the seven days

The average temperature of the corresponding period for 24 years, S. G.'s Office

The extreme variation of temperature

The maximum temperature

The highest velocity of the wind in one hour

The highest pressure of wind on one square foot

The mean relative humidity

The average relative humidity of the corresponding period for 24 years, S. G.'s Office

The total fall of rain from 9th to 15th August 1885

The average fall of the corresponding period for 24 years, S. G.'s Office

The total fall from 1st January to 15th August 1885

The average fall of the corresponding period for 24 years, S. G.'s Office

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, d drizzling rain, g gloomy, p passing temporary showers, t thunder.

ALEXANDER PEDLER.

METEOROLOGICAL OFFICE, INDIA:
Calcutta, the 17th August 1885.

For Meteorological Reporter to the Government of India.

- (d) SC and ST students, who are eligible for the Post-Matric Scholarship, will be required to pay the annual premium of Group Medclaim Policy.
- (e) SC and ST students in employment, whose pay are protected during the period of study and SC and ST students who have already availed of the Gol Scholarship during a professional course of a University, will not be eligible for the Gol Post-Matric Scholarship. They will, therefore, be required to pay all the fees and deposits and other charges like general students.

14. LOCATION, ACCESS AND COMMUNICATION

The two Mumbai Campuses of TISS: the Main Campus and the Malti and Jal A.D. Naoroji Campus Annexe are both located in Deonar in the North-East Section of Greater Mumbai. The Main Campus is situated opposite the Deonar Bus Depot on V.N. Purav Marg, earlier known as the Sion-trombay Road. The Main Campus, on approximately 10 acres, houses most of the departments, units, and the administration.

The nearest local railway station is 'Govandi'. State Transport (ST) buses from Kolhapur, Solapur, Goa, Pune, and other cities pass by the Institute and the nearest ST bus stop is 'Maitri Park'. The BEST bus stop near TISS is 'Deonar Bus Depot'.

The BEST bus stop nearest to TISS is the Deonar Bus Depot.

<i>Locations</i>	<i>Bus Routes</i>
From Dadar Station	92, 93, 504, 506, 521 (all Ltd.)
From Chhatrapati Terminus	6.
From Bandra Station	352, 358, 505 (all Ltd.) and 371
From Kurla Station	362 and 501 Ltd.

Postal Address: P.O. Box 8313 , Deonar, Mumbai 400 088.

Telephone Numbers: 91-22-2556 3289 /90/ 91/92/93/ 94/ 95/ 96
The telephone board functions from 9.00 am. to 8.00 p.m. from Monday to Friday.

Fax Number: 91-22-2556 2912

UTTA, the 17th August 1885.

**TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 14TH
OF AUGUST 1885.**

At the close of the last week a small cyclonic storm which had previously generated in Central Bengal had moved in a north-westerly direction, and was on the 7th distinctly perceptible near Gya, but it had become very feeble and was evidently breaking up. With the advance of this small storm a fairly strong monsoon current set in from the Bay of Bengal, and on the 7th all stations in the Province, except perhaps Dehree and Hazaribagh, were influenced by the Bengal branch of the monsoon only. On the 8th instant, however, a rather stronger advance of the Bombay current took place, and a westerly wind current set in over the greater part of the Province, and extended as far even as Serajunge. This was followed by a rather rapid increase of pressure at the western stations, while it fell at the eastern stations. At the same time of course there was a very considerable amount of interaction between the two opposing wind currents, and this was followed by general rain, the rainfall being particularly heavy at the stations in Behar and North Bengal. This action between the opposing currents apparently set up a slight circulation of winds in Central Bengal, and on the following day this was accompanied by falling pressure, which was particularly noticeable in the eastern parts of Central Bengal, and thus the formation of a feeble, but still distinct barometric depression, was determined on the 9th, the centre of which was apparently between Calcutta and Jessore, and round which there was decided cyclonic circulation of winds, though the wind velocities were feeble. The depression was, however, of such slight importance that by the 10th it had almost disappeared, and a second small depression was formed in the north-west angle of the Bay, the centre being apparently between Balasore and False Point. On this day pressure was comparatively low at Saugor Island, and while the greater part of the Province showed a pressure only slightly in defect of the normal, at Saugor Island the defect was more than 0.1". On this day winds at the head of the Bay showed distinct circulation round the area of low pressure, but in all cases they were light. On the morning of the 11th the depression had moved in a westerly direction, and its centre was to the west of Cuttack, where pressure was no less than 0.13" below the normal, and again on this day the winds in the districts affected by the depression showed distinct convergence to the area of low pressure. On the 12th this area of low pressure disappeared, but only to be followed by a falling pressure at Gopalpur, and it was evident that a depression was forming off the South Orissa coast, for the wind directions were irregular, and in some instances showed indraught towards the Bay. On the 13th the falling pressure at Gopalpur continued, and it was clear that a small depression had formed off this coast, and that its centre was not far from Gopalpur, and also that it was advancing in a north-westerly direction. There was of course the usual tendency to cyclonic circulation of winds round the area of low pressure. On the morning of the 14th or the last day of the week under review, the depression had moved inland and was near Cuttack, but the whirl was a very feeble one, and the winds which circulated round it were comparatively light, while over the remainder of the Province a fairly strong easterly current had set in.

Three very small and feeble depressions have thus been formed during the week, but in each case they have only existed for a day or two, and have had generally only a feeble action on the meteorology of the Province. It will, however, be noticed that, after the first general advance of the westerly winds which gave heavy rain to North and South Behar and North Bengal, the three depressions have formed, the first in Central Bengal, the second near the South-West Bengal coast, and the third off the South Orissa coast. In each case the indraught towards these slight depressions has had the effect of drawing away the moisture-laden winds from the eastern and northern parts of Bengal and of preventing the same winds from advancing towards the western parts of the Province, and thus for about the last three days of the week rainfall was very scanty or practically absent from Chutia Nagpur, South Behar, North Behar, North Bengal and East Bengal, though of course rainfall was more general in South-West Bengal and Orissa. It will also be seen that while conditions were at the beginning of the week favourable for heavy rainfall over Behar and North Bengal, and for the greater part of the week they have been moderately favourable for rainfall over South-West Bengal, Orissa, and to a certain extent Chutia Nagpur, the conditions have been unfavourable throughout the week for the production of heavy rainfall in East Bengal, and thus this district has received a comparatively scanty fall.

The average pressure for the previous week was very nearly normal, the variation being a defect of 0.007" only. As described previously, there was at first a general increase of pressure due to the setting in of westerly winds and the occurrence of heavy rainfall, but subsequently pressure decreased again, and became nearly normal, and with the successive formation of the three barometric depressions noted above, pressure of course decreased and became below the normal, particularly in the districts affected by the depressions. The actual pressure variations have to a great extent followed the formation and advance of the small whirls, and, as described previously, on some days pressure has been largely below the normal at stations thus influenced. The average pressure for the whole province for the week shows a defect of 0.04" from the normal, but this variation has of course been rather unequally distributed, and while Orissa shows a defect of 0.07", South-West Bengal shows a defect of 0.05", and East Bengal, South Behar and Chutia Nagpur have registered a defect of about 0.03". In North Behar pressure has been nearly normal. The greatest average defect at any single station has been 0.08" at Cuttack.

The oscillations of temperature during the week have been rather larger than usual during the rainy season, but still of not much practical importance. For the first three days temperature was rather below the normal, and with the heavy rainfall which occurred at this time, the tendency was for temperature to fall. On the 10th temperature was below the normal in all districts, and at Patna the defect was as much as 7°. With the cessation of the heavy rainfall, and particularly when the depression was forming off the Orissa coast, and where the wind systems showed indraught towards the disturbed area, temperature rose rather rapidly, and it was for the last three days of the week generally above the normal. The average temperature for the week has therefore been not very far removed from the normal, except in Chutia Nagpur and South Behar, where temperature has been from 1° to 2° below the normal. In Orissa, South-West and East Bengal the average temperature is almost normal, while in North Behar it has been nearly 1° above the normal.

The week has again been characterised by good general rainfall over the greater part of the Province though, as stated before, the rainfall in East and North Bengal, and in Chutia Nagpur and parts of Orissa, has been somewhat below the normal. The number of rainy days in the Province has been almost equal to the normal, for while the normal number for the week is 4·5, the actual average number of rainy days has been 4·8. Even in those districts where the rainfall has been scanty, the number of rainy days has been about equal to and in some cases has exceeded the normal number, and thus it must be concluded that the showers in these districts during the week, while not less numerous than usual, must have been generally rather lighter in character.

The two meteorological divisions which have received falls in excess of the normal are North and South Behar. In South-West Bengal the fall has been practically normal; in North Bengal and Orissa it has been somewhat below it, and in East Bengal and Chutia Nagpur decidedly below it. Thus North Behar has received a fall of 3·92 inches against the normal fall of 2·95 inches, which is equal to an excess fall of 33 per cent. South Behar has received 2·96 inches against 2·81 inches, or 5 per cent. in excess. In South-West Bengal the average fall received in the week was 2·7 inches as compared with the normal 3·03 inches, and this district has thus been in defect by 11 per cent. Orissa has reported 1·71 inches against the normal 2·72 inches and is thus 37 per cent. in defect. North Bengal registers 2·22 inches against the usual 3·35 inches, and is thus 33 per cent. in defect. East Bengal has received 2·22 inches, while the normal is 4·21 inches, the defect is therefore 70 per cent., and finally Chutia Nagpur has received 1·45 inches against the normal fall of 2·98 inches, and is consequently no less than 52 per cent. in defect. Some extremely heavy rainfalls have again been reported during the week: thus on the 8th Mickligunge, Siliguri, Burhurwa, Gopalgunge, Jehanabad, Patna, Dinapore, Barrh and Simra, all reported between 3 and 4 inches, and Sewan reported the excessive fall of 7·32 inches. On the 9th Diamond Harbour reported 4·02 inches, Darjeeling 5·26 inches, Hajipore (Mozufferpore district) 4·59 inches, Paru (Mozufferpore district) 6·5 inches, Motihari 3·75 inches and Bettiah 5·66 inches. On the 10th Paru again reported 4·55 inches and Buxar 3·71 inches. On the 12th Buxa (Julpigori district) received 5·3 inches, but for the remainder of the week the rainfalls were much lighter, and in many parts of the Province rainfall was almost absent for the last three days.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 14th of August 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 18th May 1885.

The mean temperature of the seven days	82.1
The extreme variation of temperature	13.9
The maximum temperature	92.2

The mean relative humidity	90
----------------------------	-----	-----	-----	----

The total fall of rain from 9th to 15th August 1885	1.57
---	-----	-----	------

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 17th August 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

The principal Municipalities in Bengal returned during the week ending 1st August 1885, the birth and death-rates of 24.1 and 43.7 per 1,000 of population, respectively, as opposed to 25.2 and 38.7 per 1,000, respectively, in the preceding week ending 25th July, indicating a falling off in the registration of births, and a considerable increase in that of deaths.

2. In the following Municipalities births and deaths are reported to have been recorded at the highest rates :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Chittagong	56.4	Gya	91.5
Serampore	53.0	Monghyr	90.4
Bhagulpore	45.3	Mozufferpore	68.1
Durbhanga	39.4	Puri	67.2
Patna	35.4	Patna	64.8
Gya	33.5	Serampore	69.0
				Bhagulpore	57.0
				Suburbs of Calcutta	48.6
				Chittagong	42.2
				Arrah	40.8
				Burdwan	38.1
				Durbhanga	37.7
				Midnapore	31.0

3. The principal diseases mentioned in the table appended to this memoranda proved fatal at the following rates in comparison with the results of the preceding week :—

				Ratio per mille during the weeks ending—	
				1st August 1885.	25th July 1885.
Cholera	9.8	8.1
Small-pox	4	3
Fever	15.3	14.9
Bowel-complaints	6.8	4.6
Injury	6	5
Other causes	10.8	10.3

The above figures denote that there was an increase of mortality, to a more or less extent from all the death-causes, particularly from cholera and bowel-complaints.

4. Excluding injury, the casualties from which were high nowhere, and small-pox, which proved noticeably fatal only in Arrah Town, viz. at 4.8 per 1,000 of its population, the rest of the diseases caused the highest mortality in the following Municipalities :—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Monghyr	52.4	Chittagong	25.8	Burdwan	19.8	Gya	28.7
Mozufferpore	43.7	Bhagulpore	25.4	Patna	16.5	Puri	21.0
Puri	42.0	Gya	24.6	Serampore	11.8	Midnapore	17.0
Gya	25.3	Arrah	23.9	Gya	10.9	Patna	16.8
Arrah	10.8	Serampore	23.6			Serampore	15.7
Bhagulpore	9.9	Patna	21.7			Bhagulpore	14.5
Patna	9.1					Suburbs of Calcutta	13.6
Serampore	7.8						
Durbhanga	6.3						
Chupra	5.9						
Suburbs of Calcutta	4.5						
Howrah	2.9						

It will be seen that, in comparison with the results of the preceding week, the severity of cholera had abated considerably in Puri, but that in Monghyr, Mozufferpore and Gya the prevalence of the disease was very severe.

5. The mortality referable to *Sex*, *Class* and *Age*, stands as indicated below :—

According to Sex.		According to Class.		According to Age.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.
Males	42.8	Christians	21.7	Under 1 year	411.6
Females	44.6	Hindus	44.6	1 and under 5 years	73.9
Ratio of male deaths to every 100 female deaths	108	Mahomedans	42.3	5 " 10 "	38.1
		Budhists	24.2	10 " 15 "	28.5
		Other classes	36.4	15 " 20 "	35.5
				20 " 30 "	22.3
				30 " 40 "	28.5
				40 " 50 "	28.5
				50 " 60 "	25.7
				60 years and upwards	72.4

B. LADDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

The 17th August 1885.

GENERAL REMARKS.

THE decrease in the gross weight of traffic carried still continues in comparison with last year. Food-grain, seed, salt, and railway material are the staples which record the heaviest decreases.

In the market for food-grain there is nothing doing. The same may be said of seeds. Of railway material, none is passing up the line at present, and less coal is being imported by the Locomotive Department. On the other hand ginger, jute, miscellaneous, tea and tobacco show favourable increases. The total quantity of traffic lifted during the month was 13,539'01 tons against 14,390'69 tons last June.

INCREASES.

Ginger Tons 247'09
Still continues to be in demand.

Jute Tons 646'63
The rise and fall in prices during the month led to a strong business being done.

Miscellaneous Tons 873'81
Under this head the increases have been steady during the year.

Piece-goods Tons 15'63
It is satisfactory to note this increase in the face of the flooded state of the country. The tone of the Calcutta market has greatly improved since the political situation has been more settled.

Sugar Tons 18'48
Natore, Rungpore, Dinagapore and Jalpaiguri are importing sugar.

Tea Tons 263'02
Prices are fair and competition is brisk, and almost all lots offered for sale are finding buyers.

Tobacco Tons 770'40
In this staple a very brisk demand has sprung up locally and for Burma.

DECREASES.

Ale Tons 5'87
There has apparently been no despatches of Commissariat beer during the month.

Food-grain Tons 1,901'64
Prices are nominal, and no business of any kind is doing.

Gunny-bags Tons 105'25
The demand seems confined to consignments for packing purposes.

Railway material Tons 1,069'74
No stores are coming forward for the Assam-Bihar Railway, and the Locomotive Department is importing less coal than it did last year.

Salt Tons 291'74
I am unable to assign any reason for the continued decrease in the face of reduced rates.

Seeds Tons 312'59
The market is quiet, and very limited business is doing.

G. S. LEONARD, Traffic Superintendent.

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 22nd July 1885.

EAST INDIAN RAILWAY.

Statement of Goods Traffic in Staples carried during the 4 weeks and 3 days ended 30th June 1885, as compared with the same period of 1884.

JAMALPUR, the 10th August 1885.

ALLEN MEARS.
Dy. Traffic Manager.

**General Remarks on the fluctuation of principal staples carried over the East Indian Railway
during the month ended 30th June 1885.**

INCREASES.

Coal.—The increase in the upward coal is due to an active demand for foreign railways, and that in the downward coal is due to despatches to Howrah for supply to steamers.

Railway Material, Foreign.—This increase is attributable to despatches of material for the Cawnpore-Kalpi and Bilaspore-Katni Railways.

Wheat.—There has been an increase in the weight carried of this staple, attended with a decrease in the earnings, and this was due to the short lead traffic from the Punjab to Bombay and Ghazialbad and Delhi.

Seeds.—The improvement in seeds is due to improved demand for export.

Sugar and Jaggree.—This increase is accounted for by an active demand and good prices ruling in the mofussil markets.

Piece-goods.—A reaction from the late depression in the trade, consequent upon political uncertainty, accounts for this increase.

Cotton.—The small increase in this commodity is attributable to ordinary fluctuation of trade.

Lac.—Better accounts from home and advanced prices led to this increase.

Saltpetre.—Due to ordinary fluctuation of trade

Stone.—Improved demand for building and public works purposes accounts for the increase in this staple.*

DECREASES.

Rice (husked and unhusked)—The decrease in the commodity is assignable to the failure of the rice crop in the Beerbhoom and Burdwan districts.

Salt.—This decrease is due to deficiency in the outturn at the Sambhar lakes.

ALLEN MEADS, *Deputy Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, 10th August 1885.

Nalhati State Railway.

**Statement showing Increases and Decreases in maundage of Staples carried over the line during the
month of July 1885, as compared with the corresponding period of July 1884.**

FINANCIAL DEPARTMENT.

FINANCE.

Darjeeling, the 20th August 1885.

RESOLUTION.

THE Lieutenant-Governor is now in a position to review the actual financial results of the year 1883-84, the revised estimates for the year 1884-85, and the budget estimates for 1885-86. The final accounts of the first year with the report of the Accountant-General have been received, and the Government of India have considered the estimates which the Lieutenant-Governor has formed of the financial position of this Government at the close of the past year, and of the funds at its disposal during the current year.

ACCOUNTS OF 1883-84.

2. The revised estimate adopted in the Resolution of the 30th August 1884 assumed that the year 1883-84 had opened with a credit balance of Rs. 21,47,000, and closed with a credit balance of Rs. 2,37,000; that the total amount available for expenditure was Rs. 3,95,28,000; and that Rs. 3,92,91,000 had been spent. The actual result has been more favourable by Rs. 4,50,000. The amount actually available for expenditure was Rs. 4,00,11,000, and the

amount actually expended was Rs. 3,93,24,000. The closing credit balance was Rs. 6,87,000. The following table gives a general view of the figures:—

RECEIPTS.		Revenue and expenditure.	OUTGOINGS.	
Revised estimate.	Accounts.		Revised estimate.	Accounts.
Rs.	Rs.		Rs.	Rs.
2,61,94,000	2,62,61,000	Principal heads of Revenue	48,20,000	48,27,000
.....	Post Office, Telegraph, and Mint	3,000
35,06,000	37,48,000	Civil Administration	2,11,00,000	2,12,35,000
7,89,000	9,78,000	Miscellaneous	25,18,000	24,39,000
51,82,000	51,53,000	Productive Public Works	72,29,000	72,23,000
16,70,000	17,24,000	Public Works, not classed as Productive	31,97,000	32,77,000
.....	Contributions	4,27,000	3,20,000
3,73,81,000	3,78,64,000	Total ...	3,02,91,000	3,93,24,000
21,47,000	21,47,000	Opening balance
.....	Closing ditto	2,37,000	6,87,000
3,95,28,000	4,00,11,000	GRAND TOTAL ...	3,95,28,000	4,00,11,000
.....	Provincial surplus (+) or deficit (—)	—10,10,000	—14,00,000

3. The following is a distribution of the differences in respect of which the accounts are better (+) or worse (—) than the revised estimates:—

	Revenue side.	Expenditure side.	Net result.
	Rs.	Rs.	Rs.
Principal heads of Revenue ... +	67,000	— 7,000	+ 60,000
Post Office, Telegraph, and Mint	— 3,000	— 3,000
Civil Departments +	1,52,000	— 1,35,000	+ 17,000
Miscellaneous +	2,39,000	+ 79,000	+ 3,18,000
Productive Public Works ... —	29,000	+ 6,000	— 23,000
Public Works, not Productive ... +	54,000	— 80,000	— 26,000
Contributions +	+ 1,07,000	+ 1,07,000
Total ... +	4,83,000	— 33,000	+ 4,50,000

REVENUE.

4. There was an increase on the Revenue side of Rs. 4,83,000 over the revised estimates. Among the principal heads of Revenue, the only one which shows an increase is "Land Revenue" (Rs. 78,000). This increase is due to the fact that the amount of "Transfers for Productive Public Works" from Provincial to Imperial, which are adjusted under this head, came to only Rs. 6,61,715 instead of Rs. 7,92,000 as included in the revised estimate, the effect being to increase the Provincial share of Land Revenue by Rs. 1,30,285. On the other hand there was a reduction of Rs. 46,364 in the net credit under *Inter-Provincial Adjustments*, which afforded a credit for Rs. 95,636 in favour of Bengal against Rs. 1,42,000 entered in the revised estimate. There were also minor differences in the details of adjustments between Imperial and Provincial, and the result was that the total Provincial share of Land Revenue was better than the revised estimate by Rs. 78,000. Against this increase of Rs. 78,000, there was a decrease of Rs. 8,000 under Provincial rates and Rs. 3,000 under Forest.

5. Of the improvement under Civil Departments, amounting to Rs. 1,52,000, a sum of Rs. 1,17,000 is due to increase in *Sale proceeds of Jail Manufactures*. There was an increase of Rs. 9,000 under "Marine," Rs. 3,000 under "Education," Rs. 3,000 under "Medical," and Rs. 20,000 in Cinchona receipts subordinate to "Scientific and other Minor Departments."

6. The Miscellaneous receipts aggregated Rs. 9,78,000 against Rs. 7,39,000 provided for in the revised estimate. There was an increase of Rs. 2,29,000 under "Miscellaneous" proper, chiefly in *Unclaimed deposits*, and of Rs. 10,000 under "Interest." There was also an increase of Rs. 1,000 under "Superannuation" against a decrease of Rs. 1,000 under "Stationery and Printing."

7. Under Productive Public Works there was a reduction of Rs. 32,000 in railway receipts, chiefly owing to the failure of the jute crop in the districts which feed the Northern Bengal State Railway, against an increase of Rs. 3,000 in direct receipts from the irrigation canals.

8. The increase under Public Works not classed as productive public works amounted to Rs. 54,000, the bulk of which was due to increased ferry receipts.

EXPENDITURE.

9. The actual expenditure of 1883-84, compared with the revised estimate, shows an increase of Rs. 33,000. There was an increase of Rs. 58,000 under "Scientific and other Minor Departments," chiefly under Cinchona Plantations; of Rs. 49,000 under District Executive Police; and of Rs. 16,000 under Marine. Against these increases there was a saving of Rs. 76,000 under Stationery and Printing, of which Rs. 50,000 was under the sub-head of stationery supplied from central stores; of Rs. 20,000 in miscellaneous refunds subordinate to Miscellaneous, and Rs. 14,000 under Interest. There were also minor increases and decreases, and the net result, as stated above, was an increase of Rs. 33,000 over the revised estimate. The increase under "Public works not classed as productive" is nominal, and is due to the inclusion under this head of the grants made to municipalities which were shown under "Contributions" in the revised estimate. There is a saving of Rs. 1,07,000 shown under the latter head. The net result of the year was, as shown above, an improvement of Rs. 4,50,000, and the year closed with a credit balance of Rs. 6,87,000 against Rs. 2,37,000 anticipated when the revised estimate was framed.

REVISED ESTIMATE FOR 1884-85.

10. A revised estimate, based on the actuals of eight months, and in some instances, of ten months, was submitted to the Government of India with letter No. 922, dated the 4th March 1885. Later information has induced the Lieutenant-Governor to modify these estimates to a certain extent. The following table shows the revised estimates as framed in March last, the

COMMITTEES AS MODIFIED BY THE GOVERNMENT OF INDIA, AND THE ESTIMATES AS FINALLY ADOPTED BY THE GOVERNMENT OF BENGAL:—

RECEIPTS.

11. *Land Revenue.*—The total Land Revenue for the year 1884-85, as estimated by the Accountant-General when he submitted his revised estimate for that year, amounted to Rs. 3,81,18,000, and the Provincial share, including all inter-provincial adjustments, and adjustments between Imperial and

Provincial was taken by the Local Government at Rs. 1,29,79,000, as shown below :—

	Revised estimate, 1884-85. Rs.
Land Revenue	3,81,18,000
Provincial share calculated at the rate of 32·2284 per cent.	1,22,84,821
<i>Add—</i>	
On account of the steamer <i>Undaunted</i> re-transferred from the Imperial to the Provincial Marine	65,000
On account of Cemeteries	8,000
On account of inter-provincial adjustments	1,17,000
On account of charges for repair of Nizamut building at Moorshedabad	5,100
On account of Ophthalmic Surgeon attached to the Medical College Hospital	16,500
On account of the maintenance of the river bank within the precincts of the Palace of Nawab Kadr Ali Bahadoor of Moorshedabad	1,900
On account of transfer of Revenue record-room receipts and charges from Registration to Land Revenue	50,000
For civil furlough and absentee allowances	1,20,000
Readjustment of Provincial contribution for Productive Public Works for 1884-85 (<i>vide</i> Comptroller-General's No. 2231, dated 28th February 1885)	49,000
On account of extra process-serving establishment entertained by Collectors	25,000
Grant to the Agri-Horticultural Society for fibre cultivation (<i>vide</i> G. G. O. No. 701Ex., dated 9th July 1884)	500
On account of the loss incurred by the Government of Bengal in giving up the old Calcutta and South-Eastern Railway	30,000
For conservation of ancient monuments (<i>vide</i> G. G. O. No. 504, dated 4th February 1885)	7,500
Moiety of cost of the Goom Section of the Goompahar Road in Darjeeling (Financial Department No. 1833, dated 3rd December 1884)	4,020
	1,27,81,341
Add for rounding	525
	1,27,81,866
<i>Deduct—</i>	
Value of jail supplies to Assam (Financial Department No. 933, dated 12th May 1884)	2,500
Net savings in Customs establishment (Financial Department No. 1191, dated 29th February 1884)	1,88,000
Annual expenditure on account of the Meteorological Department (<i>vide</i> Bengal Government No. 1016, dated 26th March 1883)	15,366
	2,05,866
	1,25,79,000
Ten per cent. on collections from Government estates and estates of which the rental accrues temporarily or permanently to the State	4,00,000
Total	1,29,79,000

In reporting on the accounts of 1882-83, the Accountant-General brought to notice that "Civil furlough and absentee allowances" were being debited against the departments to which the officers belonged, instead of, as heretofore, against head 28, which was made wholly Imperial in the last Financial Contract. Charges of Rs. 36,016 and Rs. 43,437 were incurred by the Provincial Government in 1882-83 and 1883-84, respectively, in consequence of this change of procedure in the accounts, and a credit of Rs. 40,000 a year was accordingly provided in the revised estimate for each of the three years 1882-83 to 1884-85. It appears that this change in the classification of the charges in question was made through a misapprehension of orders, and the Government of India have since directed their re-transfer to head 28 with effect from 1884-85. As a compensation for the loss in 1882-83 and 1883-84, a sum of Rs. 79,000 has been added to the Provincial share of Land Revenue, and the provision of Rs. 40,000 for 1884-85 has been struck out. The estimate of the Government of India stands at Rs. 1,29,37,000. The latest return from the Comptroller-General shows that the total collections of land revenue during the year aggregated Rs. 3,74,66,000, or Rs. 6,52,000 less than was anticipated in March last. This falling off is due to the non-payment of revenue, amounting to Rs. 8,00,000, by the Burdwan Raj, owing to the death of the late Maharajah, whose estate has very recently been brought under the Court of Wards. The whole of this amount has been paid since the beginning of the current year, but the postponement of the payment till after the 31st March last has caused a reduction in the Provincial share of Land Revenue for 1884-85. On the other hand there has been an increase of about Rs. 2,000 under "10 per cent. on collections from Government Estates," and the estimate now stands at Rs. 1,27,34,000.

12. *Salt*.—The original estimate under this head was Rs. 1,47,000. It was reduced to Rs. 1,00,000 in the first revised estimate with reference to the actuals of 1883-84 amounting to Rs. 99,984. There has been an increase in the demand for warehouse accommodation, and the information before Government justifies the Lieutenant-Governor in assuming that the receipts will prove to have amounted to Rs. 1,24,000.

13. *Stamps*.—The revised estimate of the Local Government under this head, amounting to Rs. 64,50,000, has been raised to Rs. 64,58,000 by the Government of India. The latest returns tend to show that the receipts will probably have amounted to Rs. 64,96,000, and this amount will be taken as the revised estimate for 1884-85.

14. *Excise*.—The original estimate under this head was reduced from Rs. 52,50,000 to Rs. 51,00,000 in March last, in consequence of the high prices of rice and other food-grains prevailing during the year. The latest returns show that the Provincial receipts will not have exceeded Rs. 50,26,000. The falling off is especially in the Patna Division. The revised estimate will stand at Rs. 50,26,000.

15. *Provincial Rates*.—The estimate under this head has been raised from Rs. 38,63,000 to Rs. 38,93,000. There has been an increase in the collections of the public works cess, as also under the head of Rates for the Management of Wards' and Attached Estates in consequence of these rates having now been calculated at 1 per cent. on the current demand of rent and cesses combined, and the 4-anna rate for treasury establishments having been also calculated on both rents and cesses.

16. *Assessed Taxes*.—The returns from the Comptroller-General show that the total receipts from license-tax in 1884-85 will not have amounted to less than Rs. 14,96,000, and half of this, or Rs. 7,48,000, will be taken as the revised estimate of the Provincial share.

17. *Forests*.—The Government of India have reduced the estimate of the Local Government under this head from Rs. 7,00,000 to Rs. 6,00,000. There has been a diminution of demand for timber for railway works. The receipts will not probably have amounted to more than Rs. 5,66,000, and revised estimate of the Provincial share will stand at Rs. 2,83,000.

18. *Registration*.—The revised estimate as now adopted amounts to Rs. 5,41,000 against Rs. 5,38,000, as originally estimated.

19. *Law and Justice*.—The "Fees, fines, and forfeiture of judicial courts," and "Pledership examination fees" will probably not have come up to the anticipations formed when the revised estimate was submitted to the Government of India. The estimate is now reduced from Rs. 15,60,000 to Rs. 15,09,000.

20. *Police*.—The revised estimate under this head has been raised from Rs. 6,80,000 to Rs. 6,99,000.

21. *Marine*.—There was a falling off in pilotage receipts towards the close of the year, and the revised estimate now stands at Rs. 7,83,000 against Rs. 8,50,000 reported to the Government of India in March last.

22. *Scientific and other Minor Departments*.—There was a slight falling off in the sale proceeds of cinchona febrifuge, owing probably to the unusually cheap rate of quinine prevailing during the year. The revised estimate under this head now stands at Rs. 1,74,000 against Rs. 1,87,000 formerly estimated.

23. *Interest*.—The receipts under this head will probably have exceeded the estimate by Rs. 20,000. There has been an increase under the head of "Interest on the arrears of the public works cess." The estimate now stands at Rs. 68,000.

24. *State Railways (gross earnings)*.—The Government of India have reduced the local estimate of Rs. 41,72,000 to Rs. 41,07,000, thus:—

				Local Government. Rs.	Government of India. Rs.
Northern Bengal	21,75,000	21,65,000
Tirhoot	13,00,000	12,40,000
Patna-Gya	5,10,000	5,18,000
Dacca-Mymensingh	18,000	15,000
Calcutta and South-Eastern	92,000	94,000
Nulhati	77,000	75,000
			Total	41,72,000	41,07,000

Later information shows that the receipts from the Northern Bengal Railway will have fallen short even of the estimate of the Government of India by Rs. 24,000. The receipts from the Tirhoot State Railway will have amounted to Rs. 12,66,000, and those from the Dacca-Mymensingh and Nulhati Railways to Rs. 22,000 and Rs. 77,000 respectively. The estimate will be placed at Rs. 41,18,000.

25. The direct receipts from *Irrigation and Navigation* will probably have increased by Rs. 1,07,000, and the revised estimate has been raised from Rs. 12,60,000 to Rs. 13,07,000.

26. The receipts from Irrigation and Navigation, not classed as Productive Public Works, will not have come up to the revised estimate submitted to the Government of India. The estimate now stands at Rs. 7,77,000 against Rs. 8,00,000 as formerly estimated.

27. *Civil Buildings, Roads, and Services in charge of the Public Works Department.*—The Government of India have raised the local estimate under this head from Rs. 6,50,000 to Rs. 7,10,000. The net profits from the sale of the Akra bricks to the Port Commissioners, Calcutta, which were included in this estimate, have not been realized, as the Port Commissioners could not pay for the bricks supplied to them during 1884-85. The original estimate also included a credit of one lakh as profits from the Burrakur Iron Works. The so-called profit, however, can for the present only be applied to reducing the deposit account of the works, and should be excluded. The total receipts will not have exceeded Rs. 6,10,000, including a sum of Rs. 4,00,000 realized from the East Indian Railway Company for the value of their office in Calcutta. Rupees 6,10,000 will be taken as the revised estimate for 1884-85.

28. *Civil Buildings, Roads, and Services in charge of Civil Officers.*—A sum of Rs. 67,000 has been credited under this head "for recovery on account of zemindari embankments under the contract system." There were increases under other heads, and the revised estimate is raised from Rs. 5,03,000 to Rs. 5,79,000.

29. *Contributions.*—The sum of Rs. 30,000 entered under this head represents the refund of the amount advanced to the Wahabee Fund for the construction of a road from the Maroofgunge Bazar to the Patna Railway station.

EXPENDITURE.

30. The local estimate of the total "Direct Demands on the Revenue" has been reduced by the Government of India from Rs. 48,90,000 to Rs. 48,62,000. A reduction of Rs. 25,000 has been made under "Forests," and of Rs. 3,000 under "Land Revenue" on account of the transfer of the charges for civil furlough and absentee allowances to head 28. The latest information before Government shows that the total demands will not have been less than Rs. 48,70,000, and this amount will be taken as the revised estimate for 1884-85.

31. *General Administration.*—The expenditure under "Commissioners," "Civil Secretariat," and "Tour Expenses" showed an increase towards the close of the year. The revised estimate will be raised from Rs. 15,42,000 to Rs. 16,04,000.

32. *Law and Justice.*—The estimate of the Local Government has been reduced by the Government of India by Rs. 12,000 on account of the transfer of the charges for civil furlough and absentee allowances. The charges under the heads "High Court Judges," "Civil and Sessions Courts," and "Criminal Courts" showed a tendency towards increase; while the grant provided for "Law Officers" will not have been fully expended. The estimate has been raised from Rs. 93,56,000 to Rs. 94,12,000.

33. *Police.*—The Government of India have reduced the estimate under this head from Rs. 46,32,000 to Rs. 46,30,000 on account of the transfer of the charges for civil furlough and absentee allowances. There has, however, been a considerable increase of expenditure under District Executive Force, Presidency Police, and Village Police, and the revised estimate now stands at Rs. 47,74,000.

34. *Marine.*—The Government of India have reduced the estimate under this head by Rs. 13,000 owing to the transfer of the charges on account of civil furlough and absentee allowances. The information before Government shows that a provision of Rs. 8,23,000 will suffice.

35. *Education.*—The estimate under this head has been reduced by the Government of India by Rs. 5,000 on account of the transfer of the charges for civil furlough and absentee allowances. There has been an increase of expenditure under grant-in-aid. The revised estimate will be raised to a

36. *Medical.*—The estimate under this head also has been reduced by the Government of India by Rs. 5,000 for civil furlough and absentee allowances transferred to head 28. There has been an increase of expenditure, and the revised estimate is now placed at Rs. 14,45,000.

37. *Scientific and other Minor Departments.*—The local estimate under this head has been reduced by the Government of India from Rs. 3,62,000 to Rs. 3,51,000. The latest information shows that a provision of Rs. 3,42,000 will suffice. This amount will accordingly stand as the revised estimate for 1884-85.

38. The revised estimate of "Miscellaneous Civil Charges" now amounts to Rs. 26,61,000 against Rs. 26,65,000 formerly estimated. There will probably have been larger expenditure under "Stationery and Printing" and "Miscellaneous" against smaller expenditure under "Superannuation allowances, &c."

39. A sum of Rs. 25,000 has been spent on "Charitable Famine Relief" out of the provision of Rs. 50,000. This represents only the expenditure directly incurred by Government agency, and excludes the grants made from the provision for "Contributions" to District Road Committees for expenditure on relief works. Rupees 25,000 will accordingly stand as the revised estimate under this head.

40. *State Railways (Working Expenses).*—The local estimate under this head has been raised by the Government of India from Rs. 29,54,000 to Rs. 29,85,000, thus:—

					Local Government.	Government of India.
					Rs.	Rs.
Northern Bengal	15,15,000	15,15,000
Tirhoot	9,88,000	9,93,000
Patna-Giya	2,95,000	3,04,000
Dacca-Mymensingh	14,000	15,000
Calcutta and South-Eastern	69,000	86,000
Nullahi	73,000	75,000
Total					29,54,000	29,85,000

The latest information shows that the estimate of expenditure on the Northern Bengal State Railway will have been exceeded, and the revised estimate will now be raised to Rs. 30,00,000.

41. The working expenses of Irrigation and Navigation Canals will also have exceeded the estimate of Rs. 11,36,000, and it now stands at Rs. 11,76,000.

42. The latest returns received from the Examiner of Public Works Accounts show that the charge for interest on the capital expended on Productive Public Works, Irrigation, amounted to Rs. 22,13,000, or less by Rs. 2,000 than the sum originally estimated.

43. A provision of Rs. 1,38,000 was made in the revised estimate under the head of "State Railways, Capital Account." The whole of this grant could not be appropriated in 1884-85, and the total expenditure, including the administrative charges, and a new charge for the survey of a route for an extension of the Northern Bengal State Railway from Rungpore to the bank of the Brahmaputra river between Bugwa and Kaligunge, will not have amounted to more than Rs. 57,000. This amount will be entered as the revised estimate for 1884-85.

44. *Subsidized Railways.*—A sum of Rs. 70,000 was provided under this head for payment of compensation for lands taken up for the Tarkessur Railway. The payments could not all be effected during the current year, and the total expenditure will probably have amounted to Rs. 58,000. This amount will be taken as the revised estimate for 1884-85.

45. *Irrigation and Navigation (non-productive).*—The grant of Rs. 8,73,000 under this head will not have been fully appropriated during 1884-85, and the revised estimate now stands at Rs. 7,61,000.

46. *Civil Buildings, Roads, and Services in charge of the Public Works Department.*—The revised estimate under this head, as submitted to the Government of India, amounted to Rs. 25,21,000. The failure of the Calcutta Port Commissioners to pay within the year for a large quantity of bricks purchased by them from the Akra works has led to an increase of the stock balances of the Public Works Department, causing an increase of expenditure of more than two lakhs. The revised estimate now stands at Rs. 27,30,000.

47. *Civil Buildings, Roads, and Services in charge of Civil Officers.*—The allotment under this head included a provision of Rs. 61,000 for grants-in-aid to municipal and other funds, which were not wholly drawn during 1884-85. The revised estimate under this head now stands at Rs. 66,000.

48. A sum of Rs. 3,50,000 was provided for "contributions" to incorporated Local Funds. This was increased to Rs. 4,00,000 by the Government of India. The latest report from the Accountant-General shows that the expenditure under this head will not have exceeded Rs. 2,54,000. This amount will accordingly stand as the revised estimate for the year.

49. In letter No. 922, dated the 4th March 1885, submitting the revised estimate for 1884-85 to the Government of India, it was reported that the Province was expected to close the year 1884-85 with a credit balance of Rs. 18,39,000. The Government of India have reduced this estimate to Rs. 17,24,000. According to the revised estimate now adopted, the closing balance will now amount to Rs. 14,09,000.

BUDGET ESTIMATE, 1885-86.

50. The Lieutenant-Governor has already, in separate Resolutions, reviewed the estimates of receipts and expenditure for the current year under each head of account. Later information, however, has led the Lieutenant-Governor to modify these in some respects, while the general reduction of civil expenditure, rendered necessary in consequence of the political situation on the North-Western Frontier, has necessitated retrenchments, amounting in all to Rs. 9,07,000, in the Provincial budget for the current year. The following statement shows the original budget submitted by the Local Government, the figures accepted by the Government of India, and the estimates which the Lieutenant-Governor has finally resolved to adopt:—

REVENUE AND RECEIPTS.	Local Government (original).	Government of India.	Local Government (revised).	EXPENDITURE.	Local Government (original).	Government of India.	Local Government (revised).
	Rs.	Rs.	Rs.		Rs.	Rs.	Rs.

RECEIPTS.

51. *Land Revenue*.—The total Land Revenue for the year 1885-86 was originally estimated at Rs. 3,81,60,000, and the Provincial share at Rs. 1,28,92,000, thus :—

	Rs.
Amount of Land Revenue	3,81,60,000
Provincial share according to the percentage (32·2284)	1,22,98,000
<i>Add—</i>	
On account of steamer <i>Undaunted</i> re-transferred from the Imperial to Provincial Marine	65,000
On account of cemeteries	8,000
On account of inter-provincial adjustments	1,17,000
On account of charges for repair of Nizamut buildings at Moorshedabad	5,000
On account of Ophthalmic Surgeon attached to the Medical College Hospital	16,000
On account of the maintenance of the river bank within the precincts of the palace of the Nawab Kadr Ali Bahadoor of Moorshedabad	2,000
On account of transfer of revenue record-room receipts and charges from Registration to Land Revenue	50,000
On account of extra process-serving establishments entertained by Collectors	25,000
On account of 10 per cent. on collections from Government estates and estates on which the rental accrues temporarily or permanently to the State	4,31,000
On account of loss incurred by Government of Bengal in giving up the old Calcutta and South-Eastern State Railway	40,000
On account of civil furlough and absentee allowances	40,000
	<hr/> 1,30,97,000
<i>Deduct—</i>	
On account of value of jail supplies to Assam	2,000
On account of net savings in Customs establishments	1,88,000
On account of annual expenditure for Meteorological Department	15,000
	<hr/> 2,05,000
<i>Net—</i>	
Provincial share	<hr/> 1,28,92,000

The Government of India have deducted the credit for Rs. 40,000 taken on account of "Civil furlough and absentee allowances," as these allowances have been transferred to a separate head, 28, which is Imperial. The amount taken on account of the loss incurred by the Government of Bengal, by the transfer of the Old Calcutta and South-Eastern State Railway to the Eastern Bengal State Railway, has also been reduced by the Government of India from Rs. 40,000 to Rs. 30,000. The estimate of the Government of India thus amounts to Rs. 1,28,42,000. The death of the late Maharajah of Burdwan towards the end of last year led to the payment of about eight lakhs of land revenue due from his estate being deferred till after the 31st March, and caused a corresponding diminution in the receipts under "Land Revenue" during 1884-85. This amount, it is reported, has already been made up since the 1st April last, and will proportionally swell the receipts during the current year. The Provincial share will accordingly be increased by Rs. 2,58,000, and the estimate will stand at Rs. 1,31,00,000.

52. *Salt*.—There has been an increase in the demand for warehouse accommodation. The original estimate of Rs. 1,44,000, which has been passed by the Government of India, will be retained.

53. *Stamps*.—The total revenue from stamps has been estimated at Rs. 1,32,00,000, showing an increase of Rs. 2,08,000 over the revised estimate as it at present stands. The latest returns from the district officers show that the receipts during the first three months of the current year exceeded those of the corresponding period of last year by Rs. 1,64,000. Calculated at this rate, the total increase during the year may amount to Rs. 6,56,000. It will not be safe, however, to calculate on such a large increase, but the estimate may be safely placed at a round sum of Rs. 1,33,00,000, and the Provincial share at Rs. 66,50,000.

54. *Excise*.—The estimate under this head was originally placed at 102 lakhs. The returns show that the actual receipts in 1884-85 have not amounted to more than Rs. 1,00,52,000, and the figures for the first three months of the current year show a falling off as compared with 1884-85 of Rs. 38,353, Rs. 69,800

and Rs. 69,043 respectively. On a careful consideration of all the elements involved, the Lieutenant-Governor thinks it will not be safe to place the estimate for 1885-86 at a higher figure than Rs. 97,00,000, although, if the rains are favourable, and the harvest a success, a larger revenue may confidently be looked for. In forecasting the Excise revenue for the year, there are three principal points to be considered. In the first place it is undeniable that in some of the districts from which a large part of this revenue is drawn, notably in Gya, there has been for a year past considerable pressure upon the population, and the surplus available for expenditure on luxuries, among which country liquor takes a prominent place, has approached a vanishing point. This circumstance has largely affected the rates offered at auction for the outstills where this system is still in force. In the second place it is an indisputable fact that, in apparent defiance of the laws of political economy, the revenue of some districts, such as Bhagulpore, had been unnaturally inflated by errors of administration, and that the liquor-vendors have for some years been carrying on their business at a loss. This of course is not a state of things which could continue for more than a comparatively short time; and the inevitable collapse has now taken place. Lastly, the outstill system, under which the rate of monthly license fee is determined by auction before the beginning of the year, is, for obvious reasons, less immediately responsive to the fluctuations of the season. The rates for the current year were settled once for all in March last, and were injuriously affected by the deficient rainfall and scanty crops of 1884-85. If, as may be hoped, the harvests of 1885-86 are favourable, the outstill revenue will improve comparatively little. On the other hand, the sudder distilleries are very sensitive to the fluctuations in the prosperity of the agricultural classes; and though there has been some delay (for financial reasons) in introducing these, and in strengthening the supervising staff, it is hoped that good harvests will react favourably on the returns of this branch of the revenue. It will depend on whether the autumn rains are propitious, whether the operation of this last-named factor will cause the Excise revenue to exceed the estimate. If they should be unseasonable, the Lieutenant-Governor cannot hope for a larger revenue than 97 lakhs.

55. *Provincial Rates.*—The revised estimate under this head for 1884-85 now stands at Rs. 38,93,000. The latest returns from the district officers show that the receipts from the public works cess during the first quarter of the current year exceeded those of the corresponding period of last year by more than Rs. 17,000. The Burdwan Estate has also been brought under the Court of Wards, and there will be an increase under "Management rates." The estimate will be placed at Rs. 39,10,000.

56. *Assessed Taxes.*—The proceeds of the license-tax during the first three months of the current year show a falling off compared with the collections made during the same period of 1884-85. This falling off is attributed to the depression of the rice trade in Bhagulpore, Bankoora, Hooghly, Jessore, Mozufferpore, and Rungpore. It is expected that this will be made up as the year goes on. The Provincial estimate will stand.

57. *Forests.*—The total receipts of the Forest Department are estimated at Rs. 8,00,000 against Rs. 5,66,000, the revised estimate for 1884-85. It is expected that, with more gazetted officers available for the Chota Nagpore and Orissa Divisions, the departmental operations will be more successfully developed during the working season of 1885-86. There has also been a revival of trade in timber in the Sunderbuns, and an increase in the demand for firewood is anticipated. The estimate of Rs. 8,00,000, which has been passed by the Government of India, will stand. The Provincial share amounts to Rs. 4,00,000.

58. *Registration.*—The Provincial share of the Registration receipts has been estimated at Rs. 5,55,000 against Rs. 5,41,000, the revised estimate for 1884-85. The Provincial receipts during the first two months of the current year show an increase of Rs. 6,000 over those of the same period of last year. Looking to the steady expansion of registration operations all over Bengal, the Lieutenant-Governor would place the estimate at Rs. 5,60,000 for 1885-86.

59. *Law and Justice.*—The receipts under Law and Justice (proper) aggregated Rs. 8,23,000 in 1882-83 and Rs. 7,63,875 in 1883-84; while it is anticipated that they will not have amounted to more than Rs. 7,54,000 in 1884-85. The

fees, fines, and forfeitures of the judicial courts partake largely of the character of casual receipts, the amount of which from year to year is, as it were, the balance of many chances. It will not be safe, however, to estimate these receipts for next year at more than Rs. 7,60,000. The estimate will accordingly be reduced from Rs. 8,10,000 to Rs. 7,60,000.

In the original estimate under Jails for 1885-86, the sale proceeds of jail manufactures were taken at Rs. 7,50,000 against an average of Rs. 8,09,000 per annum realized during the three years 1880-81 to 1882-83. The estimate was partly based on the actuals of 1883-84, which amounted to Rs. 6,37,863. The marked decrease in 1883-84 was due to exceptional causes, building operations having been in progress in many jails. These have now for the most part ceased, as the Province is now very fully equipped in the matter of jails; and the labour of the prisoners thus set free may be expected to yield a larger direct return. The estimate of receipts has accordingly been raised by one lakh, which has been passed by the Government of India. The total estimate of jail receipts stands at Rs. 8,55,000.

60. *Police*.—The estimate under this head includes a provision of Rs. 40,890 on account of "Deductions from policemen for clothing" and "Clothing receipts." These deductions were not formerly exhibited in the accounts, but the net pay of policemen was charged to Government. The clothing of policemen costs Rs. 7 per head, of which Rs. 4 are paid by Government and Rs. 3 are deducted from the pay of the men. The estimate for the current year provides for the pay of 21,622 head constables and constables. The deduction of Rs. 3 per head would bring in Rs. 64,866. These added to the clothing receipts, which aggregated Rs. 9,464 in 1883-84, may amount to about Rs. 75,000. The estimate will be increased by Rs. 34,000, and it will stand at Rs. 7,06,000 against Rs. 6,99,000, the revised estimate for 1884-85.

61. *Marine*.—The receipts under this head aggregated Rs. 9,51,889 in 1882-83 and Rs. 8,96,260 in 1883-84, and it is anticipated that they will not have exceeded more than Rs. 7,83,000 in 1884-85. The falling off is chiefly in pilotage receipts, and is probably due to slackness of trade. In view of the large decrease in 1884-85, the Lieutenant-Governor would not place the estimate at a figure higher than Rs. 8,50,000.

62. *Education*.—The Government of India have adopted the estimate of the Accountant-General under this head, amounting to Rs. 5,42,000. This estimate includes Rs. 7,860 on account of contributions from municipalities. The departmental returns for 1883-84 show that in that year the municipal contributions to Government schools amounted to nearly Rs. 12,000, and as these are steadily increasing, the amount to be expected for 1885-86 was taken by the Local Government at Rs. 20,000. The total estimate was accordingly passed for Rs. 5,54,000, which will be retained.

63. *Medical*.—The receipts under this head aggregated Rs. 1,41,756 in 1883-84, and they will have amounted to Rs. 1,47,000 in 1884-85. The estimate for the current year, which was originally placed at Rs. 1,37,000, will be raised to Rs. 1,45,000.

64. *Scientific and other Minor Departments*.—The receipts under this head are estimated at Rs. 1,86,000, which include Rs. 1,55,000 on account of sale proceeds of Darjeeling febrifuge. The Superintendent of the Botanical Garden anticipates a falling off of Rs. 65,000 in these proceeds, owing to the despatch by the Secretary of State of 7,000lbs. of the London febrifuge. It is doubtful whether the conditions under which this febrifuge is to be sold are such as to interfere seriously with the Darjeeling febrifuge, and the Lieutenant-Governor thinks the original estimate may safely be retained.

65. *Interest*.—The receipts under this head are estimated at Rs. 73,000 against Rs. 68,000, the revised estimate for 1885-86. There are heavy arrears of public works cess in Hooghly, and an increase of revenue from interest on these arrears is also anticipated in Nuddea, Dacca, Sarun, Monghyr, and Durbhunga. The estimate of Rs. 73,000 will be retained.

66. *Stationery and Printing*.—The estimate under this head amounts to Rs. 1,26,000 against Rs. 1,08,000, the revised estimate for 1884-85. There was an abnormal falling off of miscellaneous Press receipts in 1884-85. These

will have amounted to Rs. 38,000 against Rs. 50,000 in 1883-84 and Rs. 64,000 in 1882-83. The estimate for the current year includes a provision of Rs. 50,000 on account of these receipts, and will stand.

67. *Miscellaneous*.—The original estimate of Miscellaneous receipts was Rs. 6,33,000. A sum of Rs. 10,000 has been included under this head on account of "1 per cent. recoveries for marine insurance," and the estimate, as finally adopted by the Local Government and the Government of India, amounts to Rs. 6,43,000, which will stand.

68. *State Railways (gross earnings)*.—The original estimate was made up thus—

					Rs.
Northern Bengal	23,25,000
Tirhoot State	13,60,000
Patna-Gya	5,10,000
Dacca-Mymensingh	1,50,000
Nulhati	78,000
Total					44,23,000

The Government of India have reduced the estimate of receipts from the Northern Bengal State Railway by Rs. 1,75,000, and have raised the estimate of receipts from the Patna-Gya by Rs. 10,000 and from the Dacca-Mymensingh by Rs. 50,000. The original estimate of receipts from the Northern Bengal State Railway for 1884-85 was Rs. 24,00,000. It has been reduced to Rs. 21,41,000 in the revised estimate, owing partly to the transfer of the Poradah section of the line to the Eastern Bengal State Railway from 1st July 1884, and partly to the reduction of the charge for crossing the river Ganges on the opening of the extension of the Poradah section to the new ghât at Golabnugger; but the greater portion of the decrease is due to the traffic in jute and gunny not having revived during the last year. The estimate of the Government of India for the current year, which has been adopted by the Public Works Department, will stand.

69. *Irrigation and Navigation (direct receipts)*.—The revised estimate under this head for 1884-85 amounts to Rs. 13,07,000. The estimate for 1885-86 will be raised from Rs. 12,00,000 to Rs. 13,10,000.

70. *State Railways (Provincial)*.—The receipts from the Kaunia-Dhurla Railway, which has not yet been classed as a Productive Public Work, are shown under this head. The estimate, as passed by the Government of India, provides for an increase of Rs. 10,000 over the revised estimate for 1884-85 and will stand.

71. *Irrigation and Navigation (non-productive)*.—The estimate of the Local Government, amounting to Rs. 8,00,000, has been passed by the Government of India, and will stand, the receipts in 1883-84 having aggregated Rs. 7,92,338.

72. *Civil Buildings, Roads and Services*.—The estimate of receipts in charge of the Public Works Department as adopted by the Financial Department of the Government of Bengal was Rs. 2,50,000. The Government of India accepted the estimate of Rs. 2,40,000 furnished by the Public Works Department. As the Port Commissioners will probably be able to pay for the bricks supplied to them in 1884-85 during the current year, and as it is also probable they will take more during this year, the original estimate of Rs. 2,50,000 will be retained. The estimate of receipts in charge of Civil Departments amounts to Rs. 5,01,000, and the total under this head will stand at Rs. 7,51,000.

EXPENDITURE.

73. In accordance with the instructions received from the Government of India for the restriction of expenditure in the current year, the Lieutenant-Governor caused a very careful scrutiny to be made of all heads of expenditure under the control of the Government of Bengal. Even apart from these special retrenchments, the Government of Bengal has experienced great difficulty in working up approximately to the prescribed closing balance of 20 lakhs, and for this reason the Provincial expenditure for 1885-86

was originally estimated on a very restricted scale. It was therefore peculiarly difficult to make further reductions without seriously interfering with the work of Government. The urgency of the matter, however, is patent, and it is manifest that, in the face of pressing military necessity, all considerations arising out of the improvement of the Civil administration merely must give way. In this view orders have been issued for still further reductions in the estimated expenditure for 1885-86. The heads of expenditure under which reductions have been found possible, and the amounts retrenched, will be noticed below.

74. *Refunds and Drawbacks.*—The Provincial expenditure which is classed under this head consists almost entirely of payments which Government is legally bound to make, and which cannot be deferred. No reduction under this head is possible. The estimate of Rs. 1,24,000 has been retained.

75. *Land Revenue.*—The original estimate of the Local Government under this head was Rs. 34,04,000. A sum of Rs. 3,000 has been deducted on account of civil furlough and absentee allowances, which have been transferred to the Imperial head 28, and the estimate of the Government of India stands at Rs. 34,01,000. Under this head no retrenchment could be made in the grant for "Collectors' and Deputy Commissioners', &c., establishments," the greater part of which consists of fixed charges which cannot be avoided. Similar remarks apply to the "Malikhana allotment" and the grant for "Sub-divisional establishments." The "Survey" grant has already been largely reduced, and it would not be safe to cut it down still further. Under the sub-head "Charges for the management of estates the rental of which belongs permanently or temporarily to the State," the grant for which had been fixed at Rs. 3,27,000, a reduction of Rs. 15,000 has been made, and the grant of Rs. 78,200 for "Land settlement charges" has also been reduced by a similar amount. The latter sub-head is divided between Provincial and Imperial in the proportion of 32-2284 and 67-7716 respectively. The total retrenchment under Land Revenue will therefore be Rs. 30,000, of which Rs. 20,000 is Provincial and Rs. 10,000 Imperial. The estimate of total Provincial expenditure now stands at Rs. 33,81,000. The increase of Rs. 90,000 in the estimate for 1885-86 over the revised estimate for 1881-85 is chiefly under "Collectors' and Deputy Commissioners', &c., establishments," is due to a provision having been made for the salary and travelling allowance of an additional third grade Collector on account of the new appointment of Director of Agriculture sanctioned by the Secretary of State, to an increased provision of Rs. 18,000 for "Partition of Estates' establishment," to a provision of about Rs. 20,000 for compensation for lands in Jessore, Khulna, and Shahabad, and to a revision of ministerial establishments in certain districts.

76. *Salt.*—The Provincial expenditure under Salt has been estimated at Rs. 21,000, the greater part of which represents the cost of the permanent establishment, which it is impossible to reduce or dispense with. No reduction has been made under this head.

77. *Stamps.*—The grant sanctioned under this head is comprised chiefly of the following items:—(1) The Superintendent of Stamps and his establishment; (2) discount on the sale of stamps; and (3) the cost of stamps supplied from central stores. The first of these is barely adequate, and the second and third are not under the control of the Local Government. No reduction has been possible. There is an increase under the third head owing to the larger demand for stamps by local officers. The Government of India have increased the local estimate by about Rs. 500 under miscellaneous expenses of the Superintendent, and the Provincial share of total expenditure now stands at Rs. 2,42,000, as against Rs. 2,41,000 originally estimated.

78. *Excise.*—The grant for Excise has been fixed at Rs. 4,00,000 for 1885-86 against Rs. 2,62,000 the budget estimate for the past year. The increase of Rs. 1,38,000 was provided principally in order to comply with the recommendations made by the Excise Commission. Orders have already been issued for strengthening the supervising staff throughout a large part of the Province, and for the re-introduction of the central distillery system in the place of outstills in a number of considerable towns in Behar and Bengal. The Lieutenant-Governor would have been very loath to postpone these important reforms, which will, it is hoped, effect an administrative and moral improvement of great value, and also probably result in an increase of revenue; and though

he was prepared, had necessity arisen, to make a reduction of Rs. 60,000, the Government of India has consented to the retention of the original budget provision at its full amount.

79. *Customs*.—The estimate under this head consists almost entirely of the charge for the fixed establishment of the Calcutta Custom House and Preventive establishment, which is not susceptible of reduction. The estimate amounts to Rs. 4,96,000 against Rs. 4,97,000; the revised estimate for 1884-85. The revised estimate includes a provision of Rs. 8,000 for the construction of new boats for the Calcutta Customs Patrol and Preventive Service. No such provision is needed for the current year. Smaller expenditure is also anticipated under the head of "Repairs of Preventive Service boats." Against these decreases an increased provision has been made for temporary establishment required to be maintained for keeping the Calcutta Jetties open after working hours.

80. *Assessed Taxes*.—No reduction has been considered possible in the grant for the assessment and collection of the license-tax, and the Provincial share of expenditure stands at Rs. 48,000.

81. *Recess*.—Under this head a reduction of Rs. 1,20,000 has been made, viz. Rs. 1,02,000 under Conservancy and Works (including Rs. 40,000 provided for a steamer in the Sunderbuns Division) and Rs. 18,000 under Establishment. Of the total reduction, Rs. 60,000 will be saved in the Provincial and an equal amount in the Imperial Budget. The Provincial share now stands at Rs. 2,00,000, the same as the revised estimate for 1884-85.

82. *Registration*.—The operations of the Registration Department are expected to expand even more rapidly than heretofore, in consequence of the new requirements of the Bengal Tenancy Act. No reduction in the present grant can therefore be effected. The grant for Land Registration charges, however, which are under the control of the Board, and not of the Inspector-General of Registration, has been reduced by Rs. 15,000. The Provincial share of expenditure will stand at Rs. 2,87,500, or Rs. 2,80,000 in round numbers.

83. *General Administration*.—The estimates under this head have been scrutinized with exceptional minuteness, because the expenditure has of late years shown a strong tendency to increase. It does not appear, however, that there is any charge which can be dispensed with or postponed. A small deduction of Rs. 7,000 has been made from the provision of Rs. 2,63,000 under the sub-head Board of Revenue; but, with this exception, no reduction could be made. The estimate stands at Rs. 15,50,000.

84. *Law and Justice*.—Under Law and Justice (proper) no retrenchment can be made with the exception of a small sum of Rs. 3,000 under "Pleadership examination charges." Under Jails, however, the Lieutenant-Governor has ordered a reduction of Rs. 1,07,000, of which one lakh is under the sub-head Jail manufactures (purchase of raw materials), and the remainder under Petty construction. In view, however, of the uncertain prospects of the crops in some districts, it has been found necessary to raise the provision for rations by Rs. 20,000. The net reductions cannot, therefore, be placed at a higher figure than Rs. 87,000, though it is hoped that something further may be saved if the harvests are favourable. A reduction of Rs. 12,000 has also been made on account of the transfer of civil furlough and absentee allowances to head 28. The estimate now stands at Rs. 97,59,000.

85. *Police*.—No reduction of police establishments is anywhere possible, as the strength of the force is already barely sufficient to cope with its duties. It was proposed, however, to strike out the provision of Rs. 40,000 which had been made for the supply of new arms, as it was ascertained that the old arms could be made to last another year. The Inspector General of Ordnance has, however, expressed his inability to postpone the issue of new arms indented for for the current year, and the Government of India have agreed that no reduction need be made on this account. A reduction of Rs. 7,500 has been made in the grant for purchase of clothing, and a deduction of Rs. 2,000 has been made on account of the transfer of civil furlough and absentee allowances. A sum of Rs. 3,000 has also been transferred to the Public Works Department for repairing the police-station buildings at Burrabhoom and Chas, in the Manbhoom district. The estimate will then stand at Rs. 47,09,500, or Rs. 47,09,000 in round numbers. The estimate, as originally passed in the Resolution of the 20th February 1885, included a gross provision of Rs. 2,03,672

on account of "Special police." As the grants for "Petty construction and repairs" and "Purchase of elephants and boats" were increased by Rs. 2,000 and Rs. 5,800, respectively, the provision under this head ought to have been placed at Rs. 2,51,472. This amount will stand in the estimate. The allowance for probable savings under this sub-head has, however, been raised from Rs. 10,000 to Rs. 17,800, and the net grant will stand at Rs. 1,93,672 as before.

86. *Marine*.—The charges under this head depend very largely upon the amount of shipping which visits the Port of Calcutta, and the only items which are capable of reduction are the charges for repairs and purchase of marine stores and coal. A lump deduction of Rs. 10,000 has been made on this account. A sum of Rs. 13,000 has also been deducted on account of civil furlough and absentee allowances transferred to head 28, and the grant now stands at Rs. 8,54,000.

87. *Education*.—In consequence of the straitened condition of the Provincial finances, the Education grant for 1885-86 was placed at Rs. 33,87,000, being less by Rs. 6,000 than the grant for the previous year. The proposals for giving effect to the recommendations of the Education Commission were altogether postponed, with the exception of a small increase to the salaries of Sub-Inspectors of Schools, for which Rs. 15,000 was provided. It has therefore been exceedingly difficult to make any retrenchments without seriously throwing back the work of the department. A saving has been made of Rs. 80,000, of which Rs. 15,000 is from the primary grant, Rs. 11,000 from grants-in-aid, Rs. 39,320 from building grants to European Schools, and Rs. 14,680 from establishments. The grants to European schools have for the most part been already promised, and in some cases large subscriptions have been collected from the public on the strength of the assistance promised by Government. It is expected, however, that some of these can be postponed for the present, although it will not be possible to avoid them permanently. A sum of Rs. 5,000 has been deducted on account of civil furlough and absentee allowances transferred to head 28, and Rs. 14,000 transferred to the Public Works Department to meet the cost of the following works:—

	Rs.
Construction of three wooden gates at the three main entrances of the Burrisal school	380
Extension of the Mozufferpore zillah school building	4,288
Ditto Motihari zillah school building	4,267
Construction of an arched verandah along the south front of the Moorshedabad High School	3,632
Construction of an additional building for the Baraset school	1,600
Total	14,167

The grant now stands at Rs. 32,88,000.

88. *Medical*.—The charges under this head consist chiefly of the salaries of the permanent medical establishments of all grades, and the cost of maintaining the Government hospitals and lunatic asylums. The original estimate of the Accountant-General was Rs. 14,78,000. His provision under Medical establishment was increased by Rs. 600 on account of two additional copyists sanctioned for the office of the Inspector-General of Civil Hospitals. The total was raised in round numbers to Rs. 14,79,000. From this amount Rs. 17,000 has been deducted on account of probable savings under Hospitals and Dispensaries, and Rs. 5,000 on account of transfer of civil furlough and absentee allowances to head 28. The estimate now stands at Rs. 14,57,000.

89. *Scientific and Minor Departments*.—This head includes a considerable number of items, of which the largest are Cinchona Plantations (Rs. 1,26,035) and Botanical Gardens (Rs. 99,900). Under these two sub-heads a gross retrenchment of Rs. 20,000 has been found possible, which has been obtained by reducing the native establishment on the Cinchona Plantations and some miscellaneous charges. No reduction is possible in the allotments for Provincial Museums, Donations to Scientific Societies, Emigration, Census, Examinations, or Registration of Traffic. The provision for model farms, however, has been reduced by Rs. 2,000, and a similar deduction has been made from the grant of Rs. 5,000 for local exhibitions. Under the sub-head Agricultural Department, the grant for office establishment and rent has been reduced by Rs. 4,800.

while the allotment of Rs. 25,000, which had been provided on account of the projected Veterinary College, has been struck out, the scheme having been deferred for the present. The total reductions under this head amounts to Rs. 53,800, and the total grant stands at Rs. 3,50,200 or Rs. 3,50,000 in round numbers.

90. *Superannuations*.—From the nature of this charge it is evident that no reduction is possible. There have been new pensions costing in the aggregate Rs. 1,45,686 against Rs. 98,351 lapsed since the original estimate for 1884-85 was passed. The estimate, as accepted by the Government of India, will stand at Rs. 13,15,000.

91. *Stationery and Printing*.—A Committee is now sitting which will, the Lieutenant-Governor hopes, have the result of effecting economies in the Stationery Department; but it does not seem possible to estimate for any material reduction of expenditure under this head. An endeavour is also being made to reduce the cost of printing, but it would be unsafe to reckon upon any saving during the current year. The estimate stands at Rs. 10,31,000.

92. *Miscellaneous*.—The chief items included under this head are Destruction of wild animals (Rs. 30,000), Donations for charitable purposes (Rs. 60,000), and Rents, rates and taxes (Rs. 1,63,000). The last item represents the amount of municipal taxes upon Government buildings, and cannot be reduced. The grants to charitable and other institutions are for the most part of long standing, and should not be withdrawn, except in the last resort. The grant for the destruction of wild animals has been reduced by one-half. No reduction seems possible under any other sub-head. On the contrary, the grant to the District Charitable Society has lately been increased by Rs. 3,000, and a sum of Rs. 21,614 has been paid to the Ladies' Committee of the Hospital Nurses' Institution on account of the balance of the Government grant due to it for the year 1884-85. The total grant under this head will stand at Rs. 3,45,000.

93. *Famine relief*.—No provision was made in the original estimate under this head. Considerable grants have already been made to the local officers for expenditure on famine relief. A sum of Rs. 50,000 will be allotted under this head.

94 The remaining heads, with the exception of "Contributions," all relate to public works expenditure, and it is under these that it was expected that the largest reductions could be made. There are only three heads of expenditure under Public Works classed as Productive Works. These are "36, State Railways (working expenses)," "38, Irrigation and Navigation (working and maintenance)," and "39, Interest on debt." No reduction has been possible in the estimate for the working expenses of State Railways. The estimate of the Local Government included a provision of Rs. 75,000 on account of "administrative charges of State Railways." The Government of India have deducted this provision and otherwise reduced the estimate by Rs. 41,000. As the administrative charges are now being recorded under this head with the sanction of the Government of India, the provision originally made will stand, except that the amount will be reduced to Rs. 60,000 with reference to actuals, and the total grant will be Rs. 29,40,000, thus—

					Rs.
Northern Bengal	14,00,000
Tirhoot	9,30,000
Patna-Gya	2,85,000
Dacca-Mymensingh	2,00,000
Nulhati	65,000
Administrative charges	60,000
					<hr/>
					29,40,000

The charge for "Interest" represents payments by the Government of Bengal to the Government of India, and does not admit of any reduction. The estimate passed by the Government of India, amounting to Rs. 41,69,000, will be retained. Under 38, "Irrigation, &c.," however, reductions have been possible. The provision for the repairs, &c., of the Hidgellee Tidal Canal has been reduced by Rs. 12,500, and the grant for the Sone Canals by Rs. 20,000, though, if heavy floods occur in Shahabad, the latter sum may not be available. The grants for the Orissa and Mdnapore Canals are not susceptible of reduction. The total saving under this head is Rs. 32,500. As this reduction will cause a

proportionate increase in the cost of establishment adjusted in the Roads and Building Branch, a further sum of Rs. 6,900 has been transferred from this head to head 46. The grant under 38 will stand at Rs. 10,61,000.

95. As regards the expenditure on Public Works not classed as Productive, no real reduction has been possible under either of the Railway heads 40 or 41. The grant provided for by the Government of India for the former was only the estimated cost of the Railway Branch of the Secretariat. This has now been transferred to 36, State Railways, and there will nominally be no provision under this head. The provision of Rs. 1,10,000 under 41, State Railways (working and maintenance), is for the working expenses of the Kaunia-Dhurla State Railway. No provision was made for 42, Subsidized Railways, as it was understood that all payments for compensation for lands taken for the Tarkessur Railway would be completed in 1884-85. All the adjustments could not, however, be effected in that year, and a grant of Rs. 15,000 has been asked for the current year. A provision of this amount will accordingly be made under this head. Under 44, Irrigation and Navigation, a reduction of Rs. 84,000 has been ordered on the Provincial allotment of Rs. 9,72,000, and in consequence of this reduction a further sum of Rs. 19,100 has been transferred to 46, Civil Buildings, Roads and Services, to meet the increase of cost of establishment adjusted under that head. The grant under 44 will stand at Rs. 8,69,000 in round numbers.

96. The grant for 46, Civil Buildings, Roads and Services, in charge of the Public Works Department was originally fixed at Rs. 29,25,000 in addition to which a sum of Rs. 1,30,000, consisting of subscriptions for the Bhagulpore Water-works, was available for disbursement by the Department. Of the total grant of Rs. 30,55,000, Rs. 5,55,000 was allotted for original works, Rs. 14,75,000 for repairs, Rs. 9,89,104 for establishment, and Rs. 35,896 for tools and plant. It has been ascertained that a reduction of $3\frac{1}{2}$ lakhs can be effected under repairs, and of 2 lakhs under original works, or $5\frac{1}{2}$ lakhs in all. The Government of India have, however, made a reduction of some 6 lakhs in the Imperial grant under head 46, on account of Imperial works to be carried out by the Provincial staff, and this will increase the cost of the establishments (including tools and plant) paid for from Provincial revenues by about 25 per cent. of this amount, or by Rs. 1,50,000. The net reduction under this head will, therefore, be Rs. 4,00,000 in round numbers. A sum of Rs. 26,000 has, however, been transferred to this head from heads 38 and 44, Irrigation and Navigation, as noticed above, and additional grants, amounting to Rs. 25,000, have been sanctioned to meet the following charges:—

	Rs.
For additions and alterations to Educational buildings as detailed in paragraph 87	14,167
For repairing the police station buildings at Burrabhoom and Chas, mentioned in paragraph 85	2,972
For repairing the Alipore Police case Hospital	6,139
For constructing a work-shed in the Berhampore Lunatic Asylum	1,933
Total	25,211

The grant of Rs. 3,383 sanctioned in Government order No. 1184T—F, dated 18th June 1885, for the construction of additional record-racks in the Board's Office will not be required, as the work has been deferred for the present. The total grant, therefore, now stands at Rs. 25,76,000. It will not be possible to reduce the grant below this amount. The grant for 1884-85 was placed at an exceptionally low figure, Rs. 25,21,000. In order to keep the expenditure within that amount, it was necessary to suspend all quadrennial repairs throughout the Province, to withhold the grants usually made to Civil Departments for minor works, to abandon all projects for new works, however necessary, and to stay operations on all works already begun, wherever this could be done without increasing heavy and incommensurate loss. Now, for the second year in succession, it has been found necessary to disallow all repairs except such as are absolutely necessary to prevent buildings from falling down. No new works can be undertaken, although in numerous cases court-houses, cutcherries, and other buildings have long been imperatively required. No provision has again been made for minor works by

civil officers. This state of things is justified by the imperative necessity of retrenchment; but the Lieutenant-Governor hopes that in the ensuing year 1886-87 he will be able to make an allotment under this head more in accordance with the requirements of the Province.

The estimate for "Public works in charge of civil officers" was placed at Rs. 46,000. A sum of Rs. 50,000 has been added to it for contribution to municipal and other excluded local funds, and the provision under this head stands at Rs. 96,000.

97. *Contributions.*—A sum of Rs. 5,00,000 was originally provided for contributions for local purposes. It has been reduced by the Government of India to Rs. 3,00,000. A sum of Rs. 50,000 has been transferred from this head to head 32, Famine relief, and Rs. 50,000 to 46, Public Works in charge of civil officers. The remainder, Rs. 2,00,000, is now provided under this head. About Rs. 1,62,000 of this represent recurring expenditure which cannot be avoided, such as the cost of collecting the public works cess, the grants made for communications in non-cess districts, and charges for the improvement of Government estates, and the sum available for grants-in-aid to District Road Funds is now reduced to Rs. 38,000.

98. *Closing balance.*—According to the estimate submitted to the Government of India in March last, it was expected that the Province would close the year 1885-86 with a credit balance of Rs. 16,35,000. The Government of India raised this balance to Rs. 16,80,000. According to the estimate now adopted, the closing balance will amount to Rs. 23,85,000. Inclusive of the balance with which the year opened, the total amount available for expenditure was, according to the estimate of the Government of India, Rs. 4,42,48,000, and according to the estimate now adopted Rs. 4,41,20,000. The difference amounts to Rs. 1,28,000, as shown below:—

			Better.	Worse.
			Rs.	Rs.
RECEIPTS.				
Opening balance	3,15,000
Land Revenue	2,58,000
Stamps	50,000
Excise	2,50,000
Provincial rates	45,000
Registration	5,000
Law and Justice	50,000
Police	34,000
Marine	46,000
Education	12,000
Medical	9,000
XXVII, Irrigation	1,10,000	...
Civil Buildings	10,000
Total			5,33,000	6,61,000
Net			1,28,000

The expenditure as now estimated is less by Rs. 8,33,000 than the estimate passed by the Government of India. This reduction is, however, less than the savings (Rs. 9,37,000) reported to the Government of India in letter No. 1049T—F, dated the 5th June 1885, by Rs. 1,04,000, which is made up as follows:—

			Rs.
Retrenchment withdrawn under Excise	30,000
Ditto ditto Police	40,000
Increase under Medical	1,000
Ditto Miscellaneous	25,000
Decrease under Subsidized Railways	15,000
Ditto Civil Buildings (exclusive of transfers from other service heads)	8,000
Total			1,19,000
Decrease under 36, State Railways	15,000
Net increase			1,04,000

The necessity of this further grant of Rs. 1,04,000 has been explained above, and the closing balance now stands at Rs. 23,85,000 against Rs. 16,80,000 originally estimated by the Government of India, and (Rs. 16,80,000 + Rs. 9,37,000=) Rs. 26,17,000, the balance estimated when the reductions were reported to the Government of India.

INCORPORATED LOCAL FUNDS.

99. The following table exhibits in one view the actual receipts and expenditure of the Incorporated Local Funds for 1883-84, the revised estimate for 1884-85 framed with reference to the approximate figures for 12 months furnished by the Accountant-General in his statement for March 1885, and the estimates for 1885-86 :—

RECEIPTS.	Actuals, 1883-84.	Revised estimate, 1884-85.	Original estimate, 1885-86.	Estimate of the Government of India, 1885-86.	Estimate for 1885-86 as now adopted.

GRAND TOTAL ...	74,47,918	64,46,000	64,31,134	67,45,000	63,54,000
Local surplus (+) or deficit (—) ...	+2,53,282	+29,000	—4,29,700	—4,56,000	—5,56,000

100. The estimate as originally passed showed a deficit of Rs. 4,29,700. The Government of India have increased this to Rs. 4,56,000, and it now stands at Rs. 5,56,000. The estimate of the Government of India provides for a net credit of Rs. 10,000 under "Deposits," instead of Rs. 34,000 shown in the original estimate. In other respects the figures, as originally estimated, have been passed, except that a reduction of Rs. 1,000 has been made in the estimate of receipts from the District Post Fund, of Rs. 200 from the District Road Account, and Rs. 300 from the District Fund; while a sum of Rs. 600 has been added to the estimate of expenditure of the District Post Fund, and Rs. 200 to that of the District Road Account. These additions and deductions have for the most part been made to bring the figures to round numbers in distributing them under service heads, as shown in the following paragraph. The estimate of the Government of India has been retained, except that the provision made for contributions from Provincial funds has been reduced, as explained above, from Rs. 3,00,000 to Rs. 2,00,000. From the commencement of 1884-85, the Inland Labour Transport Fund has been divided between Assam and Bengal. The undivided fund had a balance of Rs. 76,263 on the 31st March 1884. It has been decided that all pensions and leave allowances calculated at one-seventh of the salary of the employes, if paid from the date of the passing of Act I of 1882, shall be deducted from this balance, and the remainder divided in the proportions of one-fourth to Bengal and three-fourths to Assam. No division has yet been

made of the balance at credit of this fund, and it will probably have opened the current year with a balance of Rs. 70,000. This will stand in the estimate; but the Accountant-General will take early steps for the distribution of the amount in the manner decided by the Government of India.

101. The following table exhibits the figures of the estimates for 1885-86 in order of service heads:—

Receipts.	Original estimate.	Estimate as passed by the Government of India.	Estimate as now adopted.
	Rs.	Rs.	Rs.
Opening balance ..	15,94,634	20,76,000	17,85,000

By order of the Lieutenant-Governor of Bengal.

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 22nd August 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Aug. 22 '85	2.92	Rain every day. Prospects of crops good. Price of rice 11½ to 15 seers per rupee.
	Culna ..	2.60	
	Cutwa ..	3.56	
	Rancegunge ..	12.40	
	2 Bankoora, " 22 ..	4.61	Weather—cloudy and rainy, and close alternately. Prospects of crops continue favourable. <i>Telko</i> and <i>chali</i> paddy ripening. Prices steady. Health good.
	Bishenpur ..	6.52	
	3 Beerbhoom, " 22 ..	4.44	Weather—rainy. Owing to seasonable rain, transplanting of rice crop is making good progress. Prospects improved. Prices slightly higher. Cholera still prevalent.
	Rampore Haut ..	5.01	
	4 Midnapore, " 22 ..	3.43	Almost incessant rain. Much damage caused by floods in the Ghatal sub-division, in thana Gurbetta, and in parts of Tumlook. Public health fair, but fever beginning to prevail.
	5 Hooghly, " 22 ..	10.15	Weather—excessively rainy. Heavy and continuous rain is doing much injury, and much paddy on the low lands has been destroyed. <i>Aus</i> promises well, as also jute and sugarcane.
PRESIDENCY DIV.	Serampore ..	4.27	
	Jehanabad ..	7.96	
	Howrah, " 24 ..	5.73*	Much rain. State of crops good, except that much of the rice is flooded and may be damaged.
	Calcuttabah ..	7.80	
	<i>Central Districts.</i>		
	6 24-Pergha, Aug. 24 '85	8.21*	Weather—rainy. Prospects of <i>aus</i> crops continue satisfactory. Transplanting of <i>amun</i> going on. Public health good, though cases of fever, as usual in this season, are reported.
	7 Nuddea, " 22 ..	4.81	Weather—cloudy and rainy. Harvesting of <i>aus</i> paddy going on; where the land is low it has been submerged in consequence of the great height of the Ganges.
	Kushtea ..	3.52	
	Meherpur ..	5.74	
	Chudchanga ..	4.01	
RAJSHAHY DIV.	Ranaghat ..	2.93	
	8 Khoolna, " 22 ..	6.44	Rain during the whole week. Prospects of <i>aus</i> and <i>amun</i> paddy good. Public health fair. Some fever prevails.
	9 Jessore, " 22 ..	6.02	Heavy and continuous rain throughout the week. Some injury to <i>aus</i> paddy, which is being reaped, is apprehended from the heavy downpour in the week. <i>Amun</i> crop is doing well. Fever has appeared.
	Jhenida ..	6.05	
	Magoora ..	4.46	
	Narail ..	4.17	
	Boungong ..	5.67	
	10 Moonsheerabad, " 22 ..	3.14	Weather—seasonable. Prospects of <i>amun</i> good. Considerable damage done to <i>aus</i> by the floods of the Ganges and other rivers, large areas where the crop was growing having been entirely submerged. Public health good. Common rice selling at from 11½ to 13 seers per rupee.
	Lalbagh ..	3.31	
	Kandi ..	4.03	
RAJSHAHY DIV.	Jungipore ..	3.61	
	11 Dinagepore, Aug. 21 '85	1.93	Light rain throughout the district this week. <i>Bhadoi</i> and jute crops are being cut; former very good and latter fair. <i>Amun</i> doing well. Rice selling at from 13 to 19 seers per rupee.
	12 Rajshahye, " 22 ..	3.88	Weather—hot and rainy. Harvesting of <i>aus</i> paddy and jute continues. Prospects of paddy, jute, sugarcane, &c., fair. Fever prevalent. A little cholera reported, chiefly from Nowgong.
	Natore ..	4.59	
	Nowgong ..	2.71	
	13 Rungpore, " 22 ..	1.74	Showers almost every day. Harvesting of <i>aus</i> and transplanting of <i>amun</i> still going on. More rain wanted in the Kurigram sub-division. Cutting of jute continues. Prospects of other crops good. Bowel-complaints and fevers are prevalent.
	Kurigram ..	0.70	
	Niphamari ..	0.87	
	Gaibanda ..	2.01	
	14 Bogra, " 22 ..	2.52	Slight rain daily and weather consequently cool. Shocks of earthquake still continue. Prospects of crops continue to be favourable. Public health fair.
RAJSHAHY DIV.	15 Pubna, " 22 ..	4.18	Weather—cloudy and rainy. <i>Aus</i> is being cut with a good outturn on the lands that have not suffered from inundation. Prospects of <i>amun</i> and jute excellent. Public health very good.
	Serajgunge ..	5.01	
	16 Darjeeling, " 22 ..	6.13	Weather—wet and warm with thunder-storms. Prospects of the harvests good.
	17 Julpigoree, " 22 ..	3.30	Alternate rain and sun. Prospects of crops good in every direction. Cattle-disease still prevails in thanas Boda, Shikurpur, and Mynagore, and cholera in the last-named thana.

* For week ending 22nd instant.

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
WENGLAL.—consolid.			
Eastern Districts.			
Dacca Division.	18 Dacca, Aug. 22 '85	6.02	Weather—cloudy and rainy. <i>Amu</i> paddy and jute being reaped; sowing of <i>shail</i> and <i>roachia</i> paddy going on. Some damage to <i>amun</i> paddy is anticipated in Nawabgunge station owing to a considerable rise of the river. Prospect of crops and public health generally good.
	Manickgunge	5.46	
	Munshigunge	4.36	
	Naraingunge	4.18	
	19 Furreedpore, „ 22 „	9.29	Much rain at the Sadler. <i>Amu</i> paddy has been harvested with fair outturn. <i>Amun</i> , jute and sugarcane doing well.
	Goalundo	3.74	
	Madaripore	5.26	
	20 Backergunge, Aug. 20 „	4.7	Weather—seasonable. Harvesting of <i>am</i> crop is actively going on. Transplanting of <i>amun</i> is nearly completed. General health good.
	21 Mymensingh, „ 21 „	1.79	
	Jamulpur	1.24	Weather—seasonable. There was a shock of earthquake on the 16th instant. State of crops and public health generally good.
Chittagong Divn.	Kishoregunge	1.98	
	Attua	Nil	
	Netrokona	0.53	Heavy rain throughout the week. Prospects of crops fair. Transplanting still continues. Prices steady. General health good. Cattle-disease has appeared.
	22 Chittagong, Aug. 25 '85	14.31	
	23 Noakhally, „ 21 „	7.28	Weather—cloudy and rainy. Harvesting of <i>am</i> crop continues. Transplanting of <i>amun</i> going on. Prospects good.
	Fenny	2.20	
	24 Tipperah „ 20 „	1.85	Weather—cloudy with high winds and frequent showers. All crops on the ground promise well, especially <i>amun</i> paddy. Public health very good, except in the case of a limited tract which is suffering from malarious fever.
	Brahmanbariah	2.27	
	Chandpore	5.50	
	25 Chittagong Hill „ 18 „	3.93	Weather—very hot during the week. Occasional fall of rain during the week has much improved paddy crops. Cotton and sugarcane thriving well. Fever very prevalent.
	Tracts.		
	Hill Tipperah, „ 19 „	2.39	Weather—hot and cloudy with occasional rain. <i>Amun</i> paddy still being transplanted. <i>Joom</i> crops getting on well. Public health good.
BEHAL.			
PATNA DIVN.	26 Patna, Aug. 22 '85	4.00	Weather—fair and cloudy alternately. <i>Bhadai</i> promising. Transplanting of paddy going on. Cholera reported from the Barh and Behar sub-divisions, and small-pox from thana Bickram and Bilsa in the Behar sub-division.
	27 Gaya, „ 22 „	4.44	
	28 Shahabad, „ 22 „	2.29	Weather—cloudy. <i>Bhadai</i> doing well. Transplanting of paddy going on. A few cases of cholera reported from the Nowada sub-division. Prices stationary.
	Buxar	0.23	
	Bladhuwa	0.15	
	29 Darbhanga, „ 22 „	2.41	Weather—cloudy with occasional showers. Prospects of <i>bhadai</i> continue favourable. <i>Murua</i> , <i>makai</i> , <i>shama</i> and <i>kauri</i> coming into ear. Transplanting of paddy seedlings going on, but more rain is wanted in places. Indigo manufacture in progress. Prices remain stationary. A few cases of cholera reported from Madhubani. Public health generally good.
	Tajpur	1.19	
	Madhubani	0.58	
	30 Mozufferpore, „ „	Report not received.
	31 Saran, „ 22 „	3.26	Weather—cloudy and showery and close alternately. Sufficient rain reported from all parts of the district. State and prospects of crops good. Transplanting of rice almost completed. Cholera abating in the town (where special sanitary measures are still being taken) and elsewhere in the interior.
	Sewan	1.1	
BAGULUR DIVN.	Gopalgunge	0.84	Weather—cloudy with occasional rain. Prospects of <i>bhadai</i> and <i>aghani</i> crops favourable. Prices stationary. Cholera still reported from the Motihari and Bettiah towns and the interior.
	32 Champaran „ 22 „	1.94	
	33 Moughyr, Aug. 22 '85	4.20	Weather—cloudy with occasional heavy showers. Prospects continue good. Transplanting of <i>aghani</i> being pushed on. Prices steady. Cholera somewhat less.
	Begusserai	0.63	
	Jamui	2.40	
	34 Bhagulpore, „ 22 „	5.48	Raw, cloudy and wet weather. <i>Janera</i> crop on the banks of the Ganges totally destroyed by floods; more rain wanted for <i>bhadai</i> paddy in Mudehpore; elsewhere prospects of rice very good, but a few fine days wanted in the south. Cholera still bad in the south, but decreasing.
	Mudehpurah	0.50	
	Sopole	3.15	
	35 Puricah „ 22 „	2.87	Weather—showery. <i>Bhadai</i> for some miles from the Ganges destroyed; otherwise excellent. Rain required for transplanting. Health fair. Floods subsiding slowly.
	Kissengunge	1.63	
	Arrareuh	4.57	
	36 Maldah „ 22 „	4.08	Weather—first part of the week fair, latter part cloudy and rainy. Prospects of winter rice crop good. There have been extensive floods destroying the <i>bhadai</i> in dearah villages. Coarse rice selling at 12 seers per rupee at English-bazar.
	Chanchal	1.13	
	Gazole	3.57	
	Shibgunge	3.50	
	37 Sonthal Perga, „ 22 „	6.57	Weather—fine with showers occasionally in the early part of the week, since then heavy and continuous rain with strong south-easterly winds. Paddy crops reported to be doing well everywhere. <i>Janera</i> harvest has had too much rain and will be considerably shorter than last year. Considerable damage to <i>bhadai</i> from high floods in Rajmatal. Cholera still very prevalent in almost all sub-divisions; particularly bad in Godda.
	Deoghur	8.08	
	Godda	4.45	
	Rajmatal	2.1	
	Jamtara	8.85	
	Inkour	4.69	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, Aug. 21 '85	2.73	Weather—cloudy and hot with occasional scanty rainfall. <i>Beali</i> ripening and in some places being cut. <i>Sarad</i> doing well, but requires more rain. Price of rice almost unchanged. Public health generally good. Sporadic cases of cholera reported.
	39 Pooree, " 20 "	1.79	Weather—seasonable. Transplanting, puddling and weeding of <i>sarad</i> paddy in progress. Miscellaneous crops doing well. Common rice selling at an average of 18 seers 10 chittacks per rupee in the Sudder sub-division and 18 seers 3 chittacks in the Khoorda sub-division. Cholera still reported from the town and the interior.
	Khoorda " ...	3.15	
	40 Balasore " 21 "	4.90	Weather—cloudy and rainy. Weeding and transplanting going on satisfactorily. Public health good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	41 Hazaribagh, Aug. 21 '85	4.01	Weather—seasonable. Ample rain reported from all stations. <i>Bhadai</i> damaged in places by excessive rain. Transplanting of rice nearly complete and crops promise well. Cholera very prevalent and some fever also reported. Prices steady.
	42 Lohardugga, " 22 "	4.93	Weather—cloudy and rainy. Excessive rain during the week; continuance of this weather for many days more will be injurious to the <i>bhadai</i> crop. In the Palamow sub-division there is very little sickness, but in the head-quarters sub-division cholera and fever are on the increase; the former has assumed an epidemic character in some villages in the Ranchee and Mandar thanas. Prices stationary.
	43 Singhbhum,	Report not received.
	44 Manbhum, " 22 "	4.26	Weather—wet and stormy. <i>Gundli</i> and <i>makai</i> are being cut; outturn fair. Other crops doing well, but some fine weather is now required. Public health fair.
	Govindpore " ...	2.63

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 21st OF AUGUST 1885.

THE week has again been one of steady rainfall, and in fact in most districts the fall has been very large, if not in many cases excessive. The conditions which have obtained in Bengal throughout the week have been those favourable to steady and continuous rain in almost all districts, and in no previous week during the present monsoon has the rainfall been so generally in excess of the normal, nor has the rainfall been so continuous in any previous week, as in that under review. At the close of the previous week a cyclonic depression which had formed off the South Orissa coast near Gopalpore had passed inland, and on Friday, the 14th, its centre was not far to the west of Cuttack. The falling barometer with which the formation of this depression had been ushered in continued on the following day over the whole Province, the fall being particularly rapid at the western stations, the lowest pressure being reported from Cuttack. This rapid fall at the western stations was probably connected with the inland advance of the depression, which, however, rapidly passed away and disappeared. With its advance of course a fairly strong monsoon current commenced to blow over the Province bringing moderate to heavy rain, but on the 16th a rapid fall of the barometer took place in the north-west angle of the Bay, while the wind directions showed clearly that another small cyclonic storm had formed. It was, however, rather a feeble storm, though it gave rise to a rough sea and strong winds at the Sandheads, but it was formed too close to the land for it to have time to gather strength, and by the following morning it had moved in a south-westerly direction, and was in the south of Chittia Nagpur. The depression of course carried forward with it moderate to heavy rain, and at the same time, as it advanced, a fresh rush of humid southerly winds flowed over the Province. On the following day, Tuesday, the 18th, the depression had either filled up or passed from Bengal, and rather a rapid increase of pressure commenced over the Province, the increase being as much as 0.15" at some of the south-western stations. On this day the meteorological conditions over the Province were nearly normal, and a fairly strong monsoon current was blowing from the Bay of Bengal over all districts, and was giving moderate to heavy rain in all districts and at almost all stations. The increasing pressure continued on the 19th, and this ushered in a slight advance of westerly winds, due to the branch of the monsoon coming from the Arabian Sea. At the same time the Bengal branch of the current was and had been blowing steadily and rather strongly for some days, and on the 18th in particular it was evident that a strong advance of this current was taking place in the Bay; winds were rather high in the Bay and heavy rain was falling on the Arakan coast. There was thus a considerable amount of interaction between these two more or less opposing wind systems, giving rise of course to increased precipitation or rainfall, particularly in the western and south-western districts. On this day the lowest pressure in the Province was in the western parts of South Behar, and around the low pressure area the opposing winds commenced to circulate slowly. On the 20th the westerly winds strengthened, and the low pressure area with its circulation of winds moved to the eastwards, pressure commenced to fall, and a distinct depression was formed in the eastern part of South Behar. Almost similar conditions prevailed on Friday, the 21st, and the depression became more clearly marked, and the circulation of winds rather stronger, the centre of the circulation on this day being apparently not far from Maldah. The depression, though very slight, was still sufficient to determine a distinct cyclonic circulation of winds over a large part of the Province, the southerly humid winds pouring into the Province over Eastern Bengal, and the westerly and south-westerly winds sweeping across the western districts, so that for the whole of the latter portion of the week considerable interaction was taking place, and conditions were eminently favourable to rainfall over a large portion of the Province, and the only district which, to a certain extent, escaped this action was North Behar, where the rainfall was less general than in other districts.

The variations of pressure during the week have been mainly determined by the formation and movement of the low pressure areas or barometric depressions which have been described above. In the previous week pressure was on the average of the whole Province about 0.04" in defect, but the defect was unequally distributed, and pressure was comparatively low in the south-western districts, the greatest defect being in Orissa at Cuttack. On the 15th pressure fell rapidly over the whole Province, the fall being largest in the western and south-western districts, and thus pressure was in defect of the normal on that day in all districts, the defect varying from 0.11" in Orissa to 0.03" in East Bengal. For the following two days the changes were clearly connected with the formation and advance of the small storm in the north-west angle of the Bay, and on the 16th, while pressure was 0.14" below the normal at Saugor Island, it was normal in Behar and even slightly above the normal at Durbhunga. On the 18th and 19th, as has been explained before, there was a decided and continuous increase of pressure, and on the latter date it became in excess in all districts. On the last two days of the week pressure generally fell, the decrease being generally largest in the northern and eastern districts, and at the close of the week pressure was therefore below the normal at the central stations in the Province by nearly 0.1", while it was above the normal at the western stations. For the whole week the average pressure has again been below the normal, but by scarcely so large an amount as in the previous week, the average defect being rather less than 0.08". The average defect too is rather more evenly distributed than it was previously, and no districts show any marked

The variations of temperature during the week have been mainly with a downward tendency. On the first day of the week temperature, however, rose, and it was generally above the normal by amounts which varied from 1° to 2° . With the very heavy rainfall which then commenced over the whole Province temperature commenced to fall, and on the 16th it was below the normal in almost all districts, the average defect being about 1° . From this date temperature continued somewhat below the normal for the remainder of the week; the defects in certain districts having been occasionally very considerable, and thus on the 17th, in Orissa, temperature was 5° below the normal, and on the 18th Gya reported a temperature 6° below the normal. The average temperature for the week has not of course been so largely in defect as in these cases, but still South Behar shows an average temperature 2.3° in defect of the normal, while Orissa, South-West and East Bengal and Chutia Nagpur show defects varying for 1° to 2° , and North Behar shows a slight defect only.

The effect of the meteorological conditions described previously has been to give heavy and prolonged rainfall to all districts, and though on some days rainfall in certain districts has been heavier than on others, yet the heavy falls have been so frequent and so general that it is not necessary to describe the daily rainfall in detail. As may be expected from the conditions previously sketched out, the districts receiving the largest amount of rainfall have been Chutia Nagpur, South-West Bengal and East Bengal: South Behar and Orissa have also received very heavy falls, and so, but to a rather smaller extent, has North Bengal. Thus the only district which has not received an excess fall during the week has been North Behar.

The falls in many districts have been so large as to be more than double the normal amount. Thus taking up the meteorological divisions, Chutia Nagpur has received 5.72 inches of rain against the normal amount of 2.73 inches, which is equal to an excess fall of 110 per cent. South Behar has received 4.87 inches against the normal fall of 2.41 inches, and thus is 102 per cent. in excess. South-West Bengal has received an average rainfall of 5.73 inches against the normal 3.25 inches, which is equal to 76 per cent. in excess. East Bengal reports 7.06 inches against the usual amount of 3.67 inches, and thus is 92 per cent. in excess. Orissa records an average fall of 3.90 inches against the normal 2.72 inches, which is 43 per cent. in excess. North Bengal has received 3.58 inches against the normal fall of 6.48 inches, and is thus 3 per cent. in excess, while North Behar has received an average fall of 2.20 inches, which is precisely equal to the normal amount; or taking the whole Province into consideration, and making the meteorological divisions of equal value, there has been an average excess rainfall over the whole Province equal to 61 per cent. of the normal.

On the whole, this excess rainfall has been fairly evenly distributed, but there are certain districts, even in those divisions which have received excess falls, where the rainfall for the week has been in defect. Thus in North Bengal, which has generally received a slight excess, the district of Rungpore is decidedly deficient, and only reports 1.35 inches against the normal 2.79 inches; while at Karigram and Bagdogra in this district the fall for the week has been only about 0.8 inch. In North Bengal also the Dinapore and Bogra districts have received falls decidedly below the normal, though not to the same extent as in Rungpore. In North Behar the Chumparun district is distinctly in defect, averaging only 1.58 inches against 2.75 inches, while Burhurwa in this district has only received 0.72 inch and Bettiah 1.21 inches. At Madhubani in the Durbunga district also the fall has been only 0.58 inch, and at Muddapore in the North Bhagulpore district it has only been 1.06 inches. These are the principal stations at which diminished amounts have been recorded, and there are of course corresponding instances of increased precipitation. The largest fall for the week at any single station is at Cox's Bazar, which has received 27.69 inches, while at the following stations falls of over 7 inches for the week, or an average of more than an inch of rain a day, have been recorded. In Orissa, at Jajpore. In South-West Bengal at Saugor Island, Dum-Dum, Baraset, Hooghly, Jehanabad, Mankar, Raneeunge (13.59 inches), Gangajalghati, Sonamukhi, and Satkhira. In East Bengal at Laksham, Ranchanderpore, Noakholly, Chandpore, Madaripore, Patuakhally and Perozepore. In North Bengal at Cooch Behar and Buxa. In South Behar at Aurungabad. In the Southal Pergunnahs at Deoghur and Jamtara, and in Chutia Nagpur at Ramghur, Jhoomra Hills, Giridi, Barhi, and Jhalda.

There have also been some exceptionally heavy falls during single days in this week, and thus on the 15th Cooch Behar reported 4.99 inches. On the 18th Baraset reported 5.6 inches, Jehanabad 4.79 inches, Cox's Bazar, 6.9 inches, and Jamtara (Southal Pergunnahs) 4.51 inches. On the 19th Raneeunge reported 6.51 inches, Gangajalghati (Bankoora district) 5.13 inches, and Cox's Bazar 4.84 inches. On the 20th Buxar received 4.59 inches, Aurungabad 4.43 inches, and Jhalda (Maubhoom district) 6.10 inches; and on the 21st Ranchanderpore in the Tipperah district reported the excessive fall of 16 inches; Hooghly recorded 4.02 inches, Cox's Bazar 4.14 inches, and Sheikpura (Monghyr district) 5.39 inches. Thus there has been excessive rainfall in almost all districts for the week, and in addition to these very large individual falls have been recorded on several days, and thus in many districts local floods and inundations have probably occurred.

The continuous nature of the rainfall for the week may also be judged from the fact that in South-West Bengal, East Bengal, North Bengal and Chutia Nagpur, the average number of rainy days has been about 6.3 against a normal average of about 4 days, and for the whole Province at all stations the average number of rainy days has been 5.8 against the normal average of 4.2 days.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 21st of August 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.								
	Highest observed during week.	Lowest observed during week.	Average for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 18th May 1885.

The maximum possible number of hours of sunshine ...

The mean temperature of the seven days ...

The average temperature of the corresponding period for 24 years, S. G.'s Office ...

The extreme variation of temperature ...

The maximum temperature ...

The highest velocity of the wind in one hour ...

The highest pressure of wind on one square foot ...

The mean relative humidity ...

The average relative humidity of the corresponding period for 24 years, S. G.'s Office ...

The total fall of rain from 16th to 22nd August 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The total fall from 1st January to 22nd August 1885 ...

The average fall of the corresponding period for 24 years, S. G.'s Office ...

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, d drizzling rain, t thunder.

MEMORANDA.

THE returns received from the principal Municipalities in Bengal, during the week ending 8th August 1885, disclose the following results:—

1. That births and deaths were recorded in these Municipalities in the proportions, respectively, of 23·8 and 45·6 per 1,000 of population against 24·1 and 43·7 per 1,000, respectively, during the preceding week ending 1st August, indicating a considerable advance in the registration of deaths, with a small falling off in that of births:—

2. That the undermentioned Municipalities returned the highest proportions of births and deaths:—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Bhagulpore	48·0	Monghyr	99·4
Chittagong	44·6	Gya	95·0
Patna	44·1	Mozufferpore	87·6
Mozufferpore	34·1	Patna	81·8
Gya	32·1	Chupra	75·2
				Utterpara	60·7
				Puri	54·6
				Bhagulpore	54·2
				Purneah	48·6
				Jessore	42·8
				Suburbs of Calcutta	37·4
				Burdwan	33·6

3. That the mortality from the principal diseases does not exhibit any noticeable difference in comparison with the death-rates from the same diseases during the preceding week:—

				Ratio per mille during the weeks ending—		
				8th August 1885.	1st August 1885.	
Cholera	10·6	9·8	
Small-pox	2	4	
Fever	16·0	15·3	
Bowel-complaints	7·2	6·8	
Injury	4	6	
Other causes	11·2	10·8	

4. That of the above indicated death-causes, excluding small-pox and injury, the casualties from which were nowhere noticeably large, and bowel-complaints, which proved conspicuously fatal only in the Patna and Gya towns, viz. at the rates of 21·1 and 14·3 per 1,000 of population, respectively, cholera, fever and the diseases recorded under the head of "Other causes" exhibited the highest mortality in the following Municipalities:—

Cholera.			Fever.			Other causes.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Monghyr	...	51·5	Jessore	...	42·8	Gya	...	23·2
Mozufferpore	...	41·4	Purneah	...	38·1	Patna	...	23·0
Chupra	...	33·2	Monghyr	...	27·1	Bhagulpore	...	21·7
Gya	...	31·5	Mozufferpore	...	25·5	Monghyr	...	12·6
Puri	...	29·4	Patna	...	25·0	Midnapore	...	12·4
Patna	...	12·6	Gya	...	24·6			
Arrah	...	12·0	Chupra	...	21·5			
Chittagong	...	9·4						
Serampore	...	7·8						
Bhagulpore	...	7·2						

5. That the mortality referable to Sex, Class and Age, is exhibited below:—

According to Sex.			According to Class.			According to Age.		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	47·3	Christians	...	21·7	Under 1 year	...	382·4
Females	...	43·6	Hindus	...	48·2	1 and under 5 years	...	91·5
Ratio of male deaths to every 100 female deaths	...	123	Mahomedans	...	40·5	5 " 10 "	...	43·2
			Budhists	...	24·2	10 " 15 "	...	28·1
			Other classes	...	36·4	15 " 20 "	...	26·7
						20 " 30 "	...	23·0
						30 " 40 "	...	33·0
						40 " 50 "	...	26·3
						50 " 60 "	...	31·7
						60 years and upwards	...	76·2

R. LADDERDALE, M.D., Deputy Surgeon-General,
Sanitary Commissioner for Bengal.

RESOLUTION ON THE GENERAL ADMINISTRATION REPORT OF THE BURDWAN DIVISION FOR THE YEAR 1884-85.

GENERAL DEPARTMENT—MISCELLANEOUS.

Calcutta, the 29th August 1885.

RESOLUTION.

READ—

The General Administration Report of the Burdwan Division for 1884-85.

Mr. Beames was Commissioner of Burdwan throughout the year except for a short period, during which Mr. Wilson acted for him. The report is submitted by Mr. Lewis, who took charge of the division after the close of the year.

2. *Annual tours.*—Owing to the prevalence of scarcity in some parts of the division, the transfer of the Commissioner's office from Chinsurah to Burdwan, and the necessity for that officer's attendance at certain public ceremonies, the Lieutenant-Governor sanctioned a departure from the ordinary rules regulating the duration of his cold-weather tour. In spite of these special interruptions, all the district offices but one were inspected, and those sub-divisions were visited where the Commissioner's presence was most urgently required. The tours of the district officers came up to the prescribed standard everywhere except in Howrah, where the Magistrate was detained at head-quarters by municipal business. In Tumlook, Kulna and Serampore the sub-divisional officers were out in camp for less than the regular period,

but in each case the deviation from rule is satisfactorily explained. Mr. Warde-Jones, in charge of Rampore Hât, appears to have done useful work among the Sonthals in the west of his sub-division, and to have given special attention to the improvement of village sanitation.

3. *Weather and crops ; public health.*—In Burdwan, Bankoora and Beerbhoom the rainfall of the year was deficient in quantity and unevenly distributed over the district area. A cessation of the rains in July prevented sowing and retarded transplantation, while the maturing crop suffered from insufficient rain in August and September. Thus in those parts where the rainfall was least plentiful a large area of land remained uncultivated, and the area actually tilled yielded a comparatively scanty return. Artificial irrigation was freely resorted to from tanks and from the Eden Canal in Burdwan ; but the former source of supply is said to have deteriorated, owing to the tanks having silted up through the neglect of their proprietors, and to the rainfall of the last two years having been insufficient to fill them properly. A large area of country is said to have been saved from failure by the Eden Canal ; this canal was not constructed with a view to irrigation, but to ensure a supply of good drinking water to the villages along its course. Under the exceptional circumstances of the year, permission was given to make use of the water for purposes of irrigation as far as this could be arranged for. In Midnapore, Hooghly and Howrah the crops were generally good, and the high prices which prevailed enabled the cultivators to dispose of their surplus to the best advantage. In the Metropolitan districts of Hooghly and Howrah, the cultivation of valuable staples, such as sugarcane and potatoe, is reported to be increasing.

Throughout the division the public health was generally good. The unusual dryness of the year seems to have led to a decrease in fever, while on the other hand the number of deaths from cholera rose owing to the deficient supply of good drinking water. In this respect the town of Burdwan derived substantial benefit from the new water-works. In the interior of the division the common practice of using the same tank for bathing, washing and drinking forms a standing obstacle to sanitary improvements. Here the evil is too widespread to be reached by any action of Government, and it can only be hoped that the village agencies to be organized under the Local Self-Government Act will direct their efforts towards the gradual introduction of improved methods of rural sanitation. During the past year vaccination made substantial progress in Midnapore, and the system is said to be generally popular in all districts of the division.

4. *Material condition of the people ; emigration ; price of food and labour.*—In the three northern districts of the division, the partial failure of the rice crop following upon previous bad harvests pressed severely upon the resources of the lower classes. Day-labourers suffered from want of work, and the poorer cultivators found difficulty in obtaining advances to enable them to cultivate their fields ; hence large numbers of both classes quitted their homes in search of work, leaving their families to be supported by Government relief or private charity. For the most part these were temporary emigrants, seeking employment on agricultural labour in neighbouring districts or on the earthwork of the Bengal-Nagpore Railway ; but in addition to this local emigration, there seems to have been an increase in the number of emigrants to the tea districts of Assam. Thus it is reported that 1,651 persons were registered for Assam in Burdwan, and that 8,122 persons left the district as free emigrants. Many of these, however, were natives of Chota Nagpore and Behar, and there are no means of ascertaining precisely the extent to which the regular population of the Burdwan district were induced by scarcity to enter into engagements to labour in Assam.

The average price of rice for the division rose from Rs. 2 per maund in 1883-84 to Rs. 2-7 per maund in the year under report, the highest average being Rs. 2-10-6 in Burdwan. That the rise was not greater seems to be due to the existence of considerable stocks of grain, and to the fact that distress was confined to a limited area readily accessible by rail. Wages are said to have fallen in the northern districts, and this has no doubt taken place in the case of unskilled labour ; but the statement made in the report as to the former rates seems to be incorrect. Nowhere in Western Bengal, so far as the Lieutenant-Governor is aware, do the wages of unskilled labour run as high as four annas a day.

5. *Manufactures and mines.*—The manufacture of mulberry silk continues to decline, owing, it is believed, to the competition of China and Italy. Tusser silk on the other hand has been more in demand, and last year's outturn in Beerbhoom was valued at Rs. 96,030 against Rs. 46,675 in 1883-84. Country-made cotton cloth, though more durable than Manchester stuffs and preferred to the latter by the higher classes of natives, is said to be gradually giving place to the cheaper though less substantial cloth imported from England; and many weavers have been driven to abandon their hereditary calling and take to other work. Certain qualities of country cloth, however, still hold their own in the market, and the Magistrate of the district estimates that in the Howrah *hāt*, the chief mart for the cotton goods of Hooghly, Howrah, Midnapore and parts of Nuddea, the sales of country-made cloth amount to 18 lakhs of rupees a year.

Of the ten jute mills in the division, all but one show a depreciation in the value of outturn, and one concern was closed early in the year. The export of indigo from Midnapore declined. Shell-lac was produced more largely than in the previous year, but the business is said to have been unremunerative, owing to a rise in the price of the raw material and a fall in that of shell-lac.

The sales of iron from the Government iron works near Burrakar rose from 122,000 to 498,000 tons. Iron ore and coal are plentiful in the neighbourhood of the works and a permanent supply of limestone has now been secured at a reasonable rate of royalty to the owner of the soil. Messrs. Burn and Co.'s pottery works at Raneegunge continue to prosper. They employ 700 men a day, and the value of their last year's outturn is estimated at Rs. 2,15,000.

The coal trade appears to have suffered from the depression of trade in general, and the exports from Raneegunge fell from 796,937 in 1883-84 to 635,921 in the past year. Regarding the working of some of the smaller mines, the Sub-Divisional Officer of Raneegunge remarks—

"My attention has recently been called to a custom prevailing in some workings in the hands of natives. The owners, on payment of a certain sum, allow the carters to cut the coal as much as they can carry away in one cart. These men are not necessarily skilled men, and in the absence of supervision it is not extraordinary that there was a fall, resulting in the death of two men."

6. *Trade and commerce.*—In Burdwan and Beerbhoom there was a marked falling off in the export of rice owing to the scanty harvest and to the fact that stocks were held by the local dealers in anticipation of a further rise of prices. In Bankura the export trade in rice ceased altogether, and in Midnapore, though the crop was abundant, exports declined owing to the closing of the Hidgellie canal for repairs at a time when trade is most active. The import of salt into Beerbhoom shows a considerable rise, but a large portion of the demand came from the Sonthal Pergunnahs. In Hooghly the operations of trade were normal during the year. The opening of the Tarkessur Railway, however, is likely to produce a great development of trade in the subdivisions of Serampore and Jehanabad. The following statement shows the traffic of the canals for the last three years:—

Year.	EXPORT.		IMPORT.	
	Quantity.	Value.	Quantity.	Value.
		Rs.		Rs.
1882-83	3,717,836	94,99,173	1,605,419	68,19,821
1883-84	4,479,993	1,12,97,774	1,765,014	1,02,96,931
1884-85	3,614,442	84,70,176	1,733,147	1,02,79,075

7. *State of public feeling.*—In the parts of the division near Calcutta, the discussions preceding the passing of the Bengal Tenancy Act are said to have been watched with intelligent interest, but in the remoter districts the majority of the population were hardly aware that any such discussions were going on. The elections for the municipality caused much local excitement in Howrah, and every vacancy on the Committee was keenly contested. Elsewhere the

popular activity on these occasions seems to have depended more upon the vigour which individual candidates displayed in canvassing than upon the interest taken in the election proceedings by the people themselves. With the Local Self-Government Bill, the case seems to have been different. This measure will affect the details of rural life throughout the country, and it is not surprising that the educated men, who are to be found in most villages of Bengal Proper, should have shown a natural and healthy interest in its provisions. This interest, indeed, is so keen as to threaten with a special danger the prospects of working the Act successfully. While town life tends on the whole towards stagnation, village life in Bengal is kept in constant activity by the existence of rival parties or factions by which all questions affecting the community are vigorously debated. These groups will of necessity play an important part in the administration of the new Act, and the Lieutenant-Governor takes this opportunity of expressing the hope that, in exercising the privileges now conferred upon them, they will show such discretion and moderation as to attain the practical objects which the measure has in view.

Three newspapers were published in the division during the past year. The *Shadarani* ceased to exist, and the *Medini*, after being discontinued for a time, reappeared under the name of the *Nava Medini*. All of these publications are described as well-conducted journals, and it is particularly remarked that the *Nava Medini* is free from the petty scurrilities and personal attacks upon individuals for which its predecessor was conspicuous.

8. *Crime*.—The number of cognizable cases reported shows an increase of 2 per cent., chiefly under the head of offences against property, which is attributed to the failure of crops and the high prices of food-grains. There were 32 dacoities against 26 in the previous year, the number in Bankura rising from 1 to 12. Most of these, however, were crimes of a petty character, traceable more or less to the prevalent scarcity, and not committed by professional criminals. The entire freedom of the Hooghly district, formerly noted for dacoities, from this class of crime, is attributed to the organization of an effective system of patrol out of the proceeds of the resumed police tenures. The percentage of convictions to persons brought to trial shows no material variation. The regular police are said to have worked well. The remarks of the Commissioner as to the strength of the force being proportionately less in the densely populated districts of Howrah and Hooghly, where bad characters are said to abound, and the railway enables professional criminals to work with less risk of detection, will be considered in the Judicial Department. Regarding the working of the rural police opinions seem to differ, and it may be inferred that, in the Burdwan Division as elsewhere, the efficiency of this body of men depends upon the degree of skill with which it is organized, and the attention with which the working of the organization is watched. On the whole the Lieutenant-Governor has no doubt that whether paid in land or in cash, the force is capable of being utilized in a more systematic manner and with greater effect than is the case at present, and he hopes to be able to undertake legislation on the subject shortly. In the meantime it is satisfactory to find that, in the Burdwan Division, the chowkidars appointed under Act VI of 1870 attended regularly at police stations, and that a considerable number of them obtained rewards for good service during the year.

9. *Civil Justice*.—The following statement gives the statistics of civil litigation in the division for the last two years:—

	1883.	1884.
I.—Suits for money or moveables	... 25,281	31,613
II.—Rent suits	... 28,679	31,042
III.—Title and other suits	... 6,458	5,941

The partial failure of crop in parts of the division is referred to in explanation of the general decrease of civil suits in Beerbhoom, and of the increase of suits for money and moveables in Burdwan, Bankura and Hooghly. On this point the Judge of Burdwan remarks—

“It is quite possible that the distress may have operated in both the ways indicated above. If the term of limitation was near its expiry, creditors would have felt constrained to bring suits into court on the chance even of ultimately receiving the amount decreed

to them at some future period, whilst in other cases, where delay was of no consequence, creditors would possibly have consented to postpone their demands until their debtors were in a better position to pay them."

The amounts realized in execution of decrees were everywhere greatly in excess of the results of the previous year. Proceedings, however, are said to be very costly both to decree-holders and judgment-debtors.

10. *Land Revenue*.—The revenue demand of the division was Rs. 81,64,598 from 13,613 estates. Including an arrear demand of Rs. 4,35,893, the total for realization during the year amounted to Rs. 86,00,491. The percentage of total collections on this demand was Rs. 85-8, leaving the heavy balance of Rs. 11,82,590 outstanding at the close of the year. Of this sum, however, Rs. 8,00,000 were due from the Burdwan Estate and have since been paid, while Rs. 1,70,766 were outstanding in the estates of Jellamoota and Majnamoota in Midnapore. The land revenue operations of the division will be noticed in greater detail in reviewing the Board's Land Revenue Report. The Midnapore survey was nearly completed during the year, and arrangements were made for completing the Bankura ghutwali survey on a cheaper and more expeditious system than that hitherto in force. Land registration is still incomplete in the districts of Hooghly and Midnapore. The Revenue Sale Law appears to have been worked with discretion during the year, and out of 1,029 estates which defaulted, only 209 were actually sold. The correction of errors in the classification and measurement of lands in Jellamoota and Majnamoota made good progress, and an attempt is now being made to effect a compromise with those raiyats who appealed to the High Court to contest the validity of the rates.

Excise and Stamps ; License-tax.—Excise revenue fell off in all districts of the division except Midnapore, the decrease being most marked in the districts of Bankura and Burdwan, where there was a partial failure of the rice crop, and under the heads of country spirits and pachwai, which are consumed most largely by the classes who felt the scarcity most. The total collections on account of excise revenue amounted to Rs. 10,28,844, or Rs. 33,484 less than in the previous year.

The gross collections from the sale of all descriptions of stamps, except postal and telegraph stamps, rose from Rs. 14,86,560 to Rs. 15,33,939 during the year. The sales of non-judicial stamps increased throughout the division, while the demand for court-fee stamps fell off in Burdwan, Bankura and Beerbhoom. For both of these variations the failure of crop in the northern districts is said to have been the cause. On the one hand it is said the straitened circumstances of the cultivating classes compelled them to part with their property, and thus raised the demand for non-judicial stamps, while on the other enforced abstinence from litigation reduced the sales of court-fee stamps. Regarding court-fee stamps the Commissioner remarks—

"The change introduced in July 1883 in the description of court-fee stamps has caused great difficulty in distinguishing a court-fee of one denomination from that of another. The inconvenience arising from the uniformity and identity of colour is intensified by the absence of any figures in the vernacular languages of India expressing the values of the stamps. It would, I consider, be an improvement if the stamp bore on its face the impress of its value decipherable by those who do not know English."

12. *Railways public works and communications*.—Work was commenced on the Bengal-Nagpore Railway in October 1884, and pushed on with great vigour until the end of March 1885, when operations were suspended in consequence of financial difficulties and the necessity of developing communications on the north-west frontier of India. The earthwork on this railway was especially relied upon by this Government as a means of providing remunerative labour for persons suffering from the failure of crops in the adjoining districts, and at the time when the works were stopped, a large number of persons were so employed. Thus the stoppage of works has seriously interfered with the scheme for relief operations, partly by throwing upon their own resources the persons already collected on the railway, and partly because no arrangements had been made to provide relief works on a large scale in the distressed districts, as it was intended to send all able-bodied labourers to the railway works. The Tarkessur Railway was opened in January 1885, and at

once obtained a large passenger traffic. Regarding the goods traffic of the line, the Collector of Hooghly remarks—

“It was hoped that this railway would to a large extent relieve the district roads from Baidyabati westwards of a large amount of country cart traffic, which cuts them up to a ruinous extent, and thus let free a certain sum for expenditure on feeder roads for the same railway. As yet, however, this result has not been attained, as the distances from the several stations of the railway to the great mart at Seorapholi are too short to make it worth while for carts to load and unload.”

The project for extending the line to Jehanabad and Ghattal has not yet got beyond the stage of mere discussion: but it is in contemplation to commence collecting statistics of the existing traffic, which will throw considerable light upon the probable earnings of the extended line. Two short branch lines were opened to the East Indian Railway near Barrakar and Sitarampur. No serious accidents occurred during the year on the East Indian Railway, and the management of the line is favourably reported on.

Among public works, the Burdwan water-works, which were opened by the Lieutenant-Governor in November 1884, have been much appreciated by the people of Burdwan in a year of unusual drought. The Eden Canal also proved serviceable both as supplying drinking water and for the purpose of irrigation.

Nearly four lakhs and a half was spent upon district roads during the year, and half a lakh on village roads. The Commissioner does not state what progress was made in Hooghly, where some mismanagement of the resources at the disposal of the District Committee formed the subject of remarks in the Resolution on last year's report. In the other districts of the division, road work seems to have been successfully administered during the year. In Bankura Rs. 6,510 were spent in village roads in order to give employment to labourers in the area affected by scarcity.

13. *Education.*—The statistics of education in each district of the Burdwan Division during the past year are shown in the following statement:—

DISTRICTS.	Area in square miles.	Estimated population.	Number of schools.	Number of students on the rolls.	Average number of square miles to each school.	Number of schools to each thousand of population.	Number of pupils to each thousand of the population.
Burdwan ...	2,697	1,591,823	1,716	50,497	1.57	1.23	30.28
Bankura ..	2,021	1,042,752	1,628	35,261	1.21	1.55	33.54
Beerbhoom ...	1,760	704,428	788	20,208	2.23	1.00	25.63
Midnapore ...	5,082	2,515,505	4,360	82,581	1.19	1.69	32.32
Hooghly ...	1,223	1,015,005	1,715	44,303	.71	1.68	45.64
Howrah ...	476	635,381	848	28,322	.64	1.15	44.31
Total ...	13,855	7,303,034	10,002	261,172	1.27	1.40	35.04

In every district except Midnapore the number of schools, and of students attending them, rose during the year. In Midnapore the falling off was chiefly in lower primary schools, and was due partly to the promotion to the conversion of some of these into schools of a higher class, and partly to the enforcement of the rule under which pathsalas not kept open for six months of the preceding year are prohibited from competing in the examinations. Beerbhoom and Bankura show a considerable development of primary education, which is the more remarkable as following on a scanty harvest and the prevalence of unusual poverty among the cultivating classes. In certain distressed thanas of Burdwan the pathsalas are said to have lost pupils, but even here the number of schools did not decline, as the teachers remained at their posts even though their incomes had been reduced. The industrial school for teaching carpentry and tinsmith work, established in Midnapore last year under the auspices of the Maisadal zemindars, seems to promise well. It has 68 pupils on its rolls, including a pleader of the Judge's Court, who has recently joined the school. Female education is reported to have made good progress during the year, but the figures furnished by the Commissioner to illustrate this progress are so confused and unintelligible that the Lieutenant-Governor must defer noticing the question in detail until he comes to review the report of the Director of Public Instruction. It is satisfactory to observe that the *Httakari Sabha* of Utterpara has not relaxed its praiseworthy efforts to promote female education.

14. *Committees.*—In most districts of the division the members of the Road Cess and Municipal Committees appear to have taken great interest in their duties, and to have administered the departments entrusted to them with care and ability. The elective system is said to have infused new vigour into municipal administration, and the district officers are generally of opinion that it is likely to be successful. As might perhaps be expected, the Municipal Commissioners of Howrah are most conspicuous for taking an active and intelligent part in the business of the populous town under their charge, and the thanks of the Lieutenant-Governor are especially due to those among them who, having heavy professional duties of their own, nevertheless devote much time and energy to municipal affairs.

15. *Conduct of Zemindars.*—With a single exception, regarding which special enquiry is being made, the zemindars of the Burdwan Division conducted themselves creditably throughout a year which called for special forbearance and benevolence on the part of landed proprietors. From some of the landholders liberal contributions were received in aid of the relief operations conducted by the Government, while others altogether stopped the collection of rents from their tenants. The Lieutenant-Governor desires that a special expression of his thanks may be conveyed to the gentlemen who have thus recognized the responsibilities of their position, and have come forward to help in a matter where their assistance was peculiarly appropriate and effectual.

16. *Character of Officers.*—The Commissioner's remarks on this subject will be considered in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Officiating Secretary to the Government of Bengal.

RESOLUTION ON THE REPORT OF THE SUPERINTENDENT OF EMIGRATION ON INLAND EMIGRATION FOR THE YEAR 1884.

GENERAL DEPARTMENT—INLAND EMIGRATION.

Calcutta, the 29th August 1885.

RESOLUTION.

READ—

The Report on Inland Emigration for the year 1884.

The Report is submitted by Dr. Grant, who was in charge of the Department throughout the year. In addition to the report for the year, the Superintendent of Emigration has submitted a special report called for by the Secretary of State on the working of Act I of 1882 during the three years from 1882 to 1884. This special report is now under the consideration of the Lieutenant-Governor, and will form the subject of a separate communication to the Government of India, in which the working of the Inland Emigration Act will be thoroughly reviewed and proposals for its amendment discussed. The present Resolution, therefore, will deal only with the history of Inland Emigration from these Provinces during 1884, as described in Dr. Grant's annual report.

2. The following administrative changes, some of which had been long under discussion, were carried out in the course of the year :—

(1) With the sanction of the Government of India, the separate administration of the Labour Transport Fund was introduced in Bengal and Assam from the 1st April 1884. The surplus balance of the Fund at the end of 1883-84, viz. Rs. 47,100-2-3, was divided between Assam and Bengal in the proportion of three-fourths (Rs. 35,325-1-8) to the former, and one fourth (Rs. 11,775-0-7) to the latter Province. It was further arranged that any actual deficit in the accounts of the Bengal Fund, the receipts of which are now comparatively small, should be made good by the Assam Administration.

(2) A further reduction of clerks in the Emigration offices at Goalundo and Calcutta has effected a saving of Rs. 440 a year in addition to the annual saving of Rs. 1,080 effected by reduction of establishment in 1883.

(3) In consequence of the mortality which occurred among emigrants on the railway journey to Assam, arrangements were sanctioned in April 1884 for their medical inspection at Magra on the right bank of the Hooghly river opposite Kanchrapara. Later in the year provision was made by the Northern Bengal State Railway to enable emigrants to halt at Jaipur Hât (half-way between Sara and Kaunia) for meals and for medical inspection. These arrangements seem to have worked well ; but it remains to be seen whether the opportunities afforded for rest and refreshment during a long and exhausting journey are frequent enough to prevent outbreaks of disease.

3. Some correspondence took place with the Chief Commissioner of Assam regarding the boat journey of emigrants going to Cachar and Sylhet. The Chief Commissioner urged the establishment of a river police at Goalundo to control the traffic of boats carrying sardari and free emigrants, and suggested that native boats should not be allowed to carry emigrants at all unless provided with water tanks filled with pure water at Goalundo. After some discussion it was found by this Government to be impracticable, in the existing state of the law, to control the movements of free and sardari emigrants embarked by boat in numbers under twenty. To amend the law, on the other hand, would involve undertaking to supervise and regulate the conditions of all passenger traffic on the rivers of Eastern Bengal. The Government of India concurred in this view, and observed that the only efficient check upon excessive mortality during the boat journey of emigrants to the Surma valley seemed likely to be found in the establishment of speedy communication, such as the daily steamers plying on the Brahmaputra have supplied for the Brahmaputra valley districts, and in sanitary conservancy of the Sylhet and Cachar rivers. A definite scheme for a subsidized steamer service to Sylhet and Cachar, which would reduce the duration of the journey from three weeks to about four days, is now under consideration.

4. Emigration operations during 1884 were characterized by a further development of free or unregistered emigration, by a very large increase in the

number of emigrants recruited by certificated garden sardars and by a decrease in the operations of licensed contractors and recruiters.

Information regarding emigration from Bengal to the tea districts of Assam is obtained—

(1) From the monthly returns sent to the Superintendent of Emigration by registering officers in Bengal. On these returns the Superintendent's annual report is based.

(2) From the record kept under the orders of the Assam administration at Dhubri, through which place all emigrants going to the Assam valley districts must pass.

Of free or unregistered emigrants the only statistics are those recorded at Dhubri, the estimates of Bengal district officers on the subject being for the most part little more than conjecture. No accurate information is available regarding the numbers of free emigrants who proceed to Cachar and Sylhet.

5. The results of registered recruiting carried on by the two agencies provided by the Act, viz. (a) by licensed contractors and their recruiters, and (b) by certificated garden sardars, may be stated as follows:—

(a) 211 licensed recruiters working under 6 contractors registered in the recruiting districts 7,081 emigrants and dependants, of whom 4,777 were intended for transmission *via* Calcutta to Assam, Cachar, and Sylhet, and 2,304 were intended for transmission *via* Goalundo (without passing through Calcutta) to Cachar and Sylhet only.

(b) 3,183 garden sardars certificated under the Act, of whom 3,063 were under the control of 33 local agents, registered 24,205* emigrants and dependants for transmission to the tea districts, of whom 13,970* were registered to proceed direct *via* Dhubri, and 10,235 were registered to proceed *via* Calcutta, Goalundo, and Kushtea.

* These figures are not to be found in Dr. Grant's report, but have been separately furnished by him.

The two agencies authorized by the law, therefore, collected in all 31,286 emigrants for transmission to the tea districts. Each licensed recruiter on an average registered 33.56 emigrants, and each garden sardar registered 7.60 emigrants. Some explanation of the difference between the average numbers of emigrants recruited by garden sardars and by licensed recruiters was attempted in paragraph 5 of the Resolution on the report for 1883. To those remarks it may be added that a garden sardar having collected a single batch of emigrants conducts them himself to the tea districts, whereas a recruiter generally obtains several batches of emigrants during the year, and, without leaving his recruiting ground, forwards them to the contractor under whom he works for despatch to Assam from the depot. Thus a recruiter's operations are practically continuous, and are not interrupted by a long journey to a distant tea garden in Assam. Besides the 31,286 emigrants recruited and registered by the two licensed agencies abovenamed, it appears from the Resolution by the Chief Commissioner of Assam on the Report on Immigration *via* Dhubri in 1884, that 12,199 free or unregistered emigrants reached Dhubri during the year, of whom 7,863 labourers with 3,916 dependants entered into local contracts under section 111 of Act I of 1882, and then went on to the tea gardens of the Assam Valley districts, and the remaining 420 proceeded to the tea gardens without contract under the Act. In 1883 10,096 free or unregistered emigrants reached Dhubri, of whom 7,026 with 2,363 dependants executed local contracts at Dhubri, and 707 continued their journey without having contracted under the Act.

6. In comparing the results of the operations of licensed recruiters and certificated sardars, Dr. Grant gives the following table showing the statistics of each class of emigrants registered during the last four years, exclusive of sardari emigrants registered to proceed direct *via* Dhubri:—

YEAR.	Contractors' registered emigrants.	Sardars' registered emigrants.	Total.	Percentage of sardars' to contractors' emigrants.
1881	6,416	2,379	8,794	37.0
1882	7,995	2,907	10,902	36.3
1883	9,875	5,291	15,167	54.59
1884	7,081	10,235	17,316	64.18

Registration by licensed contractors of emigrants to proceed to Assam *via*

ceased during the last two years, and the number of emigrants registered by contractors to proceed through the depôts declined greatly in 1884 in comparison with 1882 and 1883.

The business of recruiting labour for the gardens of the Assam Valley districts has in fact been in great part transferred to agents having their head-quarters at Dhubri, who import emigrants free or unregistered as far as Dhubri, and there cause them to execute local contracts under section 111 of the Act. The working of this system will be considered by the Lieutenant-Governor in reporting to the Government of India on the working of Act I of 1882 during the last three years. The steady increase in the number of coolies registered by garden sardars is satisfactory as testifying to the efficacy of the provision made in Act I of 1882 for the encouragement of this method of recruiting emigrants.

7. Only one recruiter's license was cancelled during the year for misconduct, and no garden sardar's certificate was cancelled. Thirty-three persons held licenses as local agents for the supervision of garden sardars, each having on an average 92 garden sardars under him. This system seems to work well and is believed to be acceptable to many of the firms most largely interested in tea cultivation. The operations of registered contractors were on the whole satisfactorily conducted. One case is noticed in which two Bengali women were induced by an unlicensed recruiter to emigrate to Sylhet, on the understanding that they would be employed as maidservants and not required to do field work. These women, though specially warned by the Superintendent of Emigration not to rely upon any assurances that might have been given to them privately, made no complaint until they reached Sylhet. The contractor concerned was required to redeem the women's contracts and send them back to their homes, and was warned that his license would not be renewed unless his depôt was more carefully supervised in future. A criminal prosecution instituted against the unlicensed recruiter broke down for want of evidence. Abuses of this kind are, it is believed, far from uncommon; but it is obvious that credulity, such as is reported here, must frustrate all administrative precautions, and that the only safeguard is the spread of intelligence among the emigrating classes, and a fuller knowledge of the conditions of coolie life in Assam. Further information should be furnished with regard to the circumstances under which the Superintendent of Emigration called upon Baboo A. T. Mookerjee to establish a cooly depôt at Calcutta, in order that better control over his business might be exercised by the Emigration authorities.

8. On the subject of free or unregistered emigration the Lieutenant-Governor reserves his remarks for the report which is about to be submitted to the Government of India.

9. In paragraph 11 of the Resolution on the report for 1883, Dr. Grant was asked to continue the attempt to ascertain the districts in which emigrants actually reside as distinguished from the districts in which they are registered. The figures furnished by him in illustration of this point are, however, incomplete, and do not suggest any very definite conclusion. Indeed, the migratory habits of many of the lower castes render the enquiry into their districts of residence a matter of minor importance. In his report on the working of Act I of 1882 during the last three years, Dr. Grant has enumerated the principal recruiting fields in these

It is observed that this figure does not agree with the total (24,951) for these three years as stated in Dr. Grant's Annual Reports.

provinces for contractors and garden sardars. Within this period 20,799* emigrants were registered by contractors, and 43,119 emigrants were registered by garden sardars in Bengal districts.

The garden sardars recruited chiefly in Chota Nagpore, in the Sonthal Pergunnahs, and in the districts of South Behar; but they took emigrants also from Midnapore, Bankoora, and Burdwan, and a few from other districts. The contractors registered more than 43 per cent. of their emigrants in the 24-Pergunnahs and Burdwan. They also collected many emigrants in the Sonthal Pergunnahs, and, like the garden sardars, they got the rest of their emigrants chiefly in the districts of South Behar, in Chota Nagpore, in Midnapore, and in Bankoora, and a sprinkling from elsewhere. Contractor's labourers were accompanied by 21·2 per cent. of dependants, while in the case of sardari labourers the percentage of dependants rose to 66·04 owing, it is stated, to the stronger influence exercised by garden sardars in inducing families to emigrate.

10. Of the 5,001 contractors' emigrants registered during the year, and remaining in the mofussil depôts at the close of 1883, there arrived in the Calcutta depôts 4,740 persons. This reduction of numbers is thus accounted for:—

At Mofussil depôts—detained 3, discharged 150, deserted 43, died none: total 196 or 4·10 per cent.

On journey to Calcutta—deserted 64, died 2: total 66 or 1·37 per cent.

The deductions amounted in all therefore to 262 or 5·48 per cent. as against 7·61 per cent. of deductions up to arrival in the Calcutta depôts for the year 1883. The improvement is satisfactory.

11. Of 2,304 emigrants registered for transmission direct *via* Goalundo to Cachar and Sylhet, 2,268 arrived at Goalundo (including one born on the journey), and 37 have to be deducted for casualties in the journey, of whom it is stated that 10 were left behind, 24 deserted, and 3 died. The percentage of deduction, which is only 1·6, is very small as compared with that for 1883, in which year 13·09 per cent. of the emigrants registered for Goalundo direct were recorded to have deserted.

12. Dr. Grant gives the following particulars of the stay of the 4,740 emigrants who arrived in the contractors' depôts in Calcutta in 1884, to which number have to be added 343 persons remaining in the depôts from 1883. Of the total number of 5,083, 47 were rejected, 444 were discharged, 349 deserted and 31 died; 4,022 were forwarded to Goalundo and 190 were remaining in the depôts at the end of the year. The year was an unhealthy one in the depôts, and both cholera and small-pox prevailed to some extent, the former disease causing 11 deaths; 17 persons were attacked by small-pox, but no death occurred from this disease—a result which Dr. Grant attributes to the system of segregation which was followed, and to the fact that all emigrants were vaccinated on admission into the depôts. The percentage of sick persons admitted into the depôt hospitals was 6·3 per cent. of the total admissions into the depôts as against 5·2 in 1883, and the percentage of mortality was 6·5 per mille of the total admissions into the depôts in 1884 as against 1·2 per mille in the preceding year. Dr. Grant remarks that the medical inspections of the depôts have been thorough and useful, and that the depôt hospitals have never been in a higher state of efficiency.

13. Altogether 6,359 persons were accommodated in the Goalundo depôts during the year, viz. 4,022 despatched from the Calcutta depôts (who all arrived safely at Goalundo), 2,268 persons who reached Goalundo direct from the recruiting districts, six children born at Goalundo, and 63 persons remaining in the Goalundo depôts from 1883. Of these 6,359 persons 6,238 actually embarked by steamer and country boats for the labour districts, leaving 121 who are accounted for in the following manner:—46 deserted, 63 died, 4 were released from engagements, 3 were rejected, and 5 remained in depôts at the end of the year. The Embarkation Agent, Dr. Richards, writes: "The greater loss was due mainly to the very great increase in the mortality from cholera which was prevalent during the year under review," and this, he adds "notwithstanding constant attention to sanitary and conservancy arrangements. The water used is invariably filtered, and so far as appearances and taste are concerned is perfectly pure."

14. Of the emigrants actually despatched from Goalundo 2,890 including 427 sardari emigrants embarked in steamers for Assam, and the remainder embarked in country boat for Cachar (1,156), and Sylhet (2,589). The average length of the voyage from Goalundo to Dibrugarh of the steamers which conveyed emigrants during the year was 15 days and 18 hours; on nine of 40 trips cholera occurred on the steamers, causing 13 deaths among the Goalundo emigrants, and there were 11 deaths on the voyages from other causes. It therefore appears that 2,866 of the emigrants who embarked by steamer from Goalundo arrived in the tea districts. Of the 3,775 contractors' emigrants who embarked by boat for Sylhet and Cachar, 36 deserted and 43 died on the journey; 36 of the 43 deaths were caused by cholera. The mortality from cholera on the boat journey, which has always characterized emigration to the Surma Valley, has formed the subject of correspondence to which allusion has been made above.

15. Paragraphs 8 to 12 of this Resolution have followed Dr. Grant's history of the contractors' registered emigrants. Very little information is given in the Report with regard to sardari registered emigrants further than the statement that of the 10,253 sardari emigrants registered to proceed to the tea districts by routes other than Dhubri, 9,492 were intended for transmission to the Surma Valley (viz. 5,674 for Cachar and 3,618 for Sylhet). It is also stated that 428 more of these took steamer at Goalundo for Assam. It may be assumed that so many of the remaining 315 persons as accomplished their journey safely are included in the 13,841 sardari emigrants who are stated in the Report on Immigration *via* Dhubri in 1884 to have reached Dhubri during the year. How many of the 10,235 sardari emigrants registered in 1884 for transmission otherwise than *via* Dhubri reached their destination cannot be precisely ascertained. It has been stated above that 13,970 emigrants were registered by garden sardars in Bengal districts during the year in order to travel by the direct route to Dhubri. If, therefore, all the 13,841 sardari emigrants who arrived at Dhubri were registered in Bengal districts, it would appear that a small percentage only of the number originally registered was lost on the way.

It is known that the sardari emigrants for the most part travel by railway to Magra railway station on the East Indian Railway, where they cross the Hooghly river and go to Kanchrapara station on the Eastern Bengal Railway. Thence emigrants for Assam proper travel by railway to Kaunia, and those for the Surma Valley to Goalundo. Sardars are bound by the conditions of their way-bills to bring up their batches of emigrants for inspection at places named in the way-bill. Dr. Grant writes that these way-bills were last year produced with greater regularity than in former years, but that information with regard to the journey of sardari emigrants is still incomplete. Under section 153 of the Inland Emigration Act, failure to present a way-bill is punishable with fine up to Rs. 20; but the Bengal officers who issue the way-bill in any particular case have no means of ascertaining whether its provisions are complied with, and it is only Assam officers who are in a position to institute prosecutions under that section. The point will be brought to the notice of the Chief Commissioner of Assam, with the object of securing his co-operation in enforcing compliance with the law.

16. Dr. Grant's report contains no information on the interesting subject of the period of the contract entered into by the registered emigrant, nor does it show the precise working of the change in the law by which the limit has been extended from three years to five years. The Resolutions of the Chief Commissioner of Assam on immigration through Dhubri show that the number of five-year contracts executed by labourers of all kinds who passed through Dhubri rose from 35 per cent. in 1882 to 38 per cent. in 1883 and to 57 per cent. in 1884. Of contracts registered at Dhubri in 1884, 76 per cent. were for a term of five years, while the bulk (64 per cent.) of the labourers recruited by garden sardars, and registered in the districts of residence, had entered into contracts for only three years. It is requested that mention may be made in future reports of the duration of the contracts entered into by the two classes of registered emigrants.

17. The Lieutenant-Governor acknowledges the valuable work done by Dr. Grant during the year in the supervision of registered inland emigration.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Govt. of Bengal.

**RESOLUTION ON THE REPORT ON LUNATIC ASYLUMS IN
BENGAL FOR 1884.**

MUNICIPAL DEPARTMENT—MEDICAL.

Darjeeling, the 25th August 1885.

RESOLUTION.

READ—

The Report on the Lunatic Asylums in Bengal for 1884.

Read again—

The Report for 1883, and the Resolution recorded upon it.

The report which was due on the 1st May was not submitted to Government till the 10th July. The Lieutenant-Governor trusts that greater punctuality will be observed in the submission of future reports.

There has been little or no fluctuation in the number of primary admissions and re-admissions into the asylums during the year under review as compared with the figures of the previous year. The number of admissions was 208 against 209, and of re-admissions 24 against 23. The daily average population of the asylums was 920·96 against 878·67, while the lunatics who remained in the asylums at the close of the year numbered 919, of whom 730 were males and 189 were females.

2. The number of persons treated for insanity was 1,139, of whom 90 were discharged cured during the year, which was precisely the figure in 1883. The percentage of recoveries in 1884 reckoned on the mean daily population was 9·77 against 12·47, the average of the previous ten years. The Inspector-General of Hospitals makes the following pertinent remarks:—

The decrease from the average hitherto has been explained by the reduction in the “admissions under the head of acute mania,” “uncertainty of nomenclature in the hands of different Superintendents,” and to “changes in the Superintendents of Asylums,” which “affected the nomenclature of diseases,” &c, &c. This is all very plausible, but I am not prepared to admit that such changes—no new element in the management of our asylums—can possibly have had anything whatever to do with the decrease noted. Had there been any diversity of practice—Superintendents following different classifications—I could understand the nomenclature presenting very complicated results. The types or various forms of mental disorder adopted in our asylums, and laid down in this table, are eight only. “Monomania” has been expunged, and very rightly. The only possible heading, therefore, under which a medical officer might have entered his acute or chronic mania-patients is “melancholia;” but, marvellous to relate, there has been a steady decrease of admissions under this heading. In 1882, 1883, and 1884, the figures being 12, 9, and 3, respectively. ***

Undoubtedly, the longer chronic cases are kept in the asylums, the lower the rate per cent. of recoveries. Again, a certain number of criminal lunatics is a fixed quantity, and these together tend to vitiate statistics. The rate should be reckoned on admissions only, the usual method followed in British, American, and Continental asylums.

The fallacy running through these figures for statistical purposes is that, first admissions are mixed up with recurrent insanity. Unfortunately we have no means of ascertaining the history of each patient on admission, and our cures are simply the number of persons who have recovered after attacks of mental diseases. That some of them may have suffered for various periods, or even been discharged from the same or some other asylum anteriorly is probable. I think the very low percentage of known readmissions is sufficient to corroborate this. The fallacy will be better understood, when it is remembered that recurrent mania is by no means rare, and a patient may have recovered and relapsed a great many times previous to admission, yet he is discharged cured from asylums as a separate and distinct individual each time.

It would be highly interesting could we ascertain what becomes of the discharged cured and relieved. Do these recovered and improved lunatics return to their occupations? How many die at their homes, and what time elapses between the dates of discharge and the fatal issue in each case?

3. Both in the Dacca and Cuttack Asylums the number of inmates exceeded the estimated capacity of the buildings. As in previous years there was no *real* overcrowding during the year in either of these institutions, as harmless lunatics were allowed to sleep in the verandahs, which were

not included in the estimate of capacity. The Inspector-General of Hospitals, however, considers the use of the verandahs for this purpose to be objectionable on sanitary grounds when the main wards are full of patients, and suggests some additions being made to the asylums in question. The Lieutenant-Governor will await specific proposals on this point.

4. The following statement shows the number and disposal of criminal lunatics treated in the asylums during the last three years:—

1	2	3	4	5	6	7	8	9																
YEARS.	REMAINING ON 1ST JANUARY.			ADMITTED.			RE-ADMITTED.			TOTAL.			DISCHARGED, TRANSFERRED, &c.			DEPT.			REMAINING ON 31st DECEMBER.			DAILY AVERAGE STRENGTH.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1882	266	36	302	60	8	77	9	1	10	347	37	384	36	6	42	31	4	35	261	27	288	27-05	305-75	
1883	291	27	318	55	8	63	12	..	12	386	30	416	6	50	56	13	14	27	359	314-12	36-39	348-63		
1884	333	27	360	65	9	74	10	2	12	407	30	437	5	61	66	19	2	21	333	311-31	36-24	337-05		

With the exception of the year 1883, the number of admissions has been almost the same in each of the last seven years. The return which was given in the report for 1883, showing the offences with which the criminal lunatics in confinement were charged, has been repeated in the present report. The commitments for graver crimes decreased in 1884.

5. The following table shows the number of cases in which the cause of insanity is attributed to intemperance and the use of drugs:—

ASYLUMS.	No cause assigned.	CAUSE ASSIGNED.		
		Ganja.	Spirit drinking.	Other causes.
Dullunda	56	26	2	26
Dacca	23	4	1	11
Patna	17	14	8	7
Cuttack	11	9	1	2
Berhampore	5	9
Total	112	62	12	46

Of the cases in which causes were assigned, 83 cases were ascribed to physical and 27 to moral causes. The great causes of insanity would, as usual, appear to be the abuse of ganja and spirits. In this connection the Inspector-General makes the following remarks:—"In the statement one woman is set down as having suffered from the effects of bhang (Dullunda), while opium is alleged to have caused mental disease in another (Patna). Yet opium is said to be extensively consumed by both sexes in some districts. Spirits as a cause of insanity is largely represented. No mention, notwithstanding this, is made of 'alcoholism' or 'delirium tremens,' in any of the returns. From this fact, I am inclined to doubt the correctness of assigning so many cases to excessive drink." The Inspector-General adds, and in this opinion the Lieutenant-Governor is disposed to agree, that the alleged causes entered in Statement VII bear the stamp of mere guess-work.

6. The health of the asylums was generally good, though not as good as in the previous year. The following table shows the prevalence of the principal diseases in the year under report:—

	Dullunda.		Dacca.		Patna.		Cuttack.		Berhampore.		Total.	
	1883.	1884.	1883.	1884.	1883.	1884.	1883.	1884.	1883.	1884.	1883.	1884.
Anæmia and debility	3	13	2	14	17	17	2	2	11	4	26	50
Diarrhoea	1	9	12	16	11	9	3	7	6	34	43
Dropsy	1	6	2	1	2	1	3	9
Dysentery	6	11	9	6	12	5	2	2	5	34	26
Fever	9	3	16	73	8	17	5	11	15	13	46	116
Pneumonia	1	1	1	4	2	4	5
Phthisis	5	1	19	9	19	29	2	1	3	25	34
Cholera	2	2	4	3

There was a large increase in the number of cases of anæmia and debility and diarrhoea in the Dacca and Dullunda Asylums. Dysentery increased only

in Dullunda, where 11 cases were treated against 6 in the previous year. Fever was unusually prevalent in the Dacca Asylum, where the number of cases treated increased from 16 in 1883 to 72 in 1884. The adjoining jail and outside population are said to have suffered equally, while Dr. Crombie, the Superintendent, does not remember to have known such an unhealthy season before. Cholera appeared only in the Dacca Asylum, where three cases were reported, of which two ended in death.

7. Cases of injury and accident, three of which proved fatal, occurred at Dullunda, Patna, and Berhampore. At Dullunda a lunatic struck another over the head, causing a fracture of the skull and a rupture of the brain. In Patna a patient tried to swallow a large piece of bread; it stuck in his throat and caused almost instant death. In the same asylum a patient tried to escape; he fell off a wall and broke his rib. At Berhampore the work-sheds were blown down during a violent storm, resulting in the death of one patient and the injury of seven others. The other cases reported are few in number, and are of comparatively trifling importance.

8. The number of deaths in 1884 was 87 against 52 in 1883. The increase in the mortality was principally occasioned by diarrhoea, dysentery, debility, and phthisis, and it was confined to Dullunda, Dacca, and Patna. The total number of deaths from all causes was at Dullunda 18, Dacca 29, Patna 28, Cuttack 3, and Berhampore 9. Speaking of the general mortality in all the asylums during the year, the Inspector-General writes—"It is not a high mortality; and could we but eliminate those deaths which rightfully belong to 1883, the rate would be an average one. The healthy year 1883 possibly prolonged the lives of the phthisical, the debilitated, and senile, lives which depend in a great degree, some altogether, upon meteorological conditions." As in the previous year, the small number of cases of zymotic diseases reflects great credit on the officers responsible for the sanitary condition of the institutions.

9. The following table shows the receipts and expenditure in each asylum during 1884:—

1	2	3	4	5	6	7	8	9	10	11	12	13
	Daily average strength.	Total expenditure.	Realized from friends of patients.	Actual profit from manufacture department.	Average cost of each patient as per column 3.	Average cost of each patient, deducting columns 4 and 5.	AVERAGE COST OF EACH PATIENT IN RELATION TO—					
							Establishment.	Diet.	Bazar medicines.	Clothing.	Costlingencies.	Other charges.

*Loss.

The gross expenditure rose from Rs. 82,835 in 1883 to Rs. 91,695 in the year under review. Of the increase which amounted to Rs. 8,860, Rs. 3,679 occurred under ordinary, and Rs. 5,181 under extraordinary expenditure. The principal part of the increase was under building charges, which rose from Rs. 7,016 in 1883 to Rs. 12,011 in 1884. The total cost per patient was Rs. 99-9 against Rs. 94-4-4 in the previous year, and the net cost of each inmate, after deducting the amount realized from friends of patients, and the net profit from manufactures, was Rs. 94-2 against Rs. 86-13-8. The amount received from friends of patients rose from Rs. 969 in 1883 to Rs. 1,803 in 1884. The total expenditure on account of establishment amounted to Rs. 38,446 against Rs. 37,427 in the previous year. Much, however, of the increase was apparent only, and due to the circumstance that a lay overseer was appointed at Dacca in the place of the Supernumerary Assistant Surgeon who was paid by the Medical Department.

10. The money outlay on account of diet was Rs. 21,187 against Rs. 20,294 in 1883, the increase being due to the difference in the number

of patients treated and to comparative dearness of food. The average cost of diet per head was, as usual, highest at Dullunda, where it amounted to Rs. 45-15-4, and lowest at Cuttack, where it was Rs. 20-12-7. The average cost of a lunatic's daily food was one anna six pies against one anna and three pies in 1883. The charge for clothing fell from Rs. 2,836 in 1883 to Rs. 2,579 in 1884.

11. The amount expended on raw materials for manufacture was Rs. 26,543; the value of raw materials, manufactured goods, and plant and machinery on 1st January 1884 was Rs. 61,523. The total debit thus stood at Rs. 88,066. On the other hand, the amount paid into the treasury was Rs. 15,967; manufactured goods to the value of Rs. 14,214 were consumed in the asylums, and the estimated value of the stores in stock when the year closed was Rs. 61,308, making a total credit of Rs. 91,489. The excess of credit over debit therefore amounted to Rs. 3,423, but after adjusting certain items shown in Statement XI appended to the report, the net profit on manufactures stood at Rs. 3,207 against Rs. 5,547 in the previous year. This decrease is attributed to the abolition of the castor-oil industry at Dullunda, the diminution in the sale of products at Patna, the employment of a smaller number of lunatics, and the cessation of work for three months at Berhampore, and to the wear and tear of tools and plant, and the purchase of raw materials at a higher rate at Cuttack. As explained in previous years, the net profit of a year is no proper measure of success, the articles consumed in the asylums being charged at cost price, profit being allowed on outside sales only.

12. The number of patients at the beginning of the year in the Bhowanipore European Asylum, which is not considered in the foregoing paragraphs, was 29, viz. 15 males and 14 females. During the year 25 persons were admitted, of whom 19 were males and six females. Of the 54 patients under treatment, three were discharged cured, three were made over to the Military authorities, 11 were sent to Europe under the Merchant Shipping Act or otherwise, four were transferred to the care of friends, and two died. Of the two deaths, one was due to decay in a hard drinker, while the other resulted from acute mania in a woman. Thirty-one persons remained in the asylum at the close of the year, of whom 14 were Europeans, 14 East Indians, and 3 Armenians. The female ward was as usual overcrowded, and admission had to be refused to several applicants. The total expenditure amounted to Rs. 19,804 against Rs. 19,860 in 1883. The total amount contributed by the friends of paying patients was Rs. 14,414, and the average net cost of each lunatic to the State was Rs. 186.

13. The report is full and satisfactory, and shows that the different asylums have been well managed by the officials, and efficiently supervised by the superior officers. The management of the asylums also reflects credit on the head of the Medical Department.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offy. Secretary to the Government of Bengal.

ANNUAL REPORT ON THE CIVIL LITIGATION OF GOVERNMENT DURING THE YEAR 1884-85.

JUDICIAL.

Darjeeling, the 25th August 1885.

RESOLUTION.

READ—

The Annual Report on the Civil Litigation of Government during the year 1884-85.

Read also—

The Reports for the two preceding years, and the orders of Government thereon.

There were two appeals pending in the Privy Council at the close of the year 1883-84, to both of which Government was a party as representing minors under the Court of Wards. In one of these cases a compromise was effected and the appeal withdrawn. The second appeal was still pending at the close of the year under review. No fresh appeal was filed during the year: but Government became a party to an appeal already pending as representing a minor who was adopted by the respondent in the case, and whose estate came under the Court of Wards.

2. The following statement shows the chief statistical data of the Civil litigation to which, during the last three years, Government was a party:—

Cases					
<i>Before the High Court.</i>					
			1882-83.	1883-84.	1884-85.
Appeals	{ Decided in favour of Government	...	15	17	24
	{ Ditto against Government	...	4	1	1
	{ Compromised, remanded or withdrawn	...	4	4	4
	Total	...	23	22	29
<i>Before the Lower Courts.</i>					
Appeals	{ Decided in favour of Government	...	587	96	111
	{ Ditto against Government	...	325	3	8
	{ Compromised, remanded or withdrawn	...	11	6	8
	Total	...	923	104	127
Original cases	{ Decided in favour of Government	...	274	274	313
	{ Ditto against Government	...	102	23	139
	{ Compromised, remanded or withdrawn	...	45	23	90
	Total	...	421	330	542
Total	{ Decided in favour of Government	...	876	387	448
	{ Ditto against Government	...	431	37	148
	{ Compromised, remanded or withdrawn	...	60	32	102
	Total	...	1,367	456	698

3. The percentage of cases decided in favour of Government declined from 91.27 to 75.17. It is explained that the decrease was owing to decisions being given adverse to Government in some 104 land acquisition cases in the districts of the 24-Pergunnahs, Patna, Dacca and Khulna, the Judge slightly increasing the amount of compensation offered by the Collector to the claimants. The litigation, though greater than in the preceding year, was little more than half that of 1882-83.

4. The single case decided against Government in the High Court was of importance, a Full Bench ruling that, where the notification for sale by the Collector of an estate or share of an estate under Act XI of 1859 has not been affixed in the way prescribed, 30 clear days before the date appointed for the sale, the Collector ceases to have any jurisdiction to put up the property for sale. It would seem therefore that it is irrelevant whether the defaulter has sustained any material injury or not; that the defaulter need not sue within one year as the law directs; and that the presumption arising from a grant of a sale certificate under section 8, Act VII of 1867, is not to be drawn. Apparently the words Act VII of 1867 should be Act VII (B.C.) of

1868. A copy of the remarks on this case contained in the report will, with this correction, be sent to the Board of Revenue, for consideration.

5. In the lower Appellate Courts the percentage of cases decided against Government rose from 3·03 to 6·72. In original cases also the result was worse than in 1883, the percentage having risen from 10·75 to 30·75. The total value of the cases in which decisions were given adverse to Government increased from Rs. 93,773 to Rs. 6,19,974. Of this amount, Rs. 33,000 composed the value of the suit in the High Court, Rs. 2,193 the value of suits in zillah appeals, and the balance that of original suits. In original suits decided adversely to Government, the value of suits to obtain possession of land, estates, or other property, or for the recovery of rents or debt bonds, was Rs. 3,23,521; of land acquisition suits, Rs. 1,88,907; and of suits for the reversal of revenue sales on the pleas of informality, non-liability, &c., Rs. 1,01,304. The unusually unfavourable results were therefore not due merely to the reason assigned in the report, namely, the adverse decisions in the land acquisition cases. From the cases briefly summarised in the report, it is obvious that a good deal of laxity exists in the proceedings of revenue officers in sales for arrears of land revenue. The subject will be dealt with in the Revenue Department of this office.

6. The result of the litigation in which the Court of Wards was interested during the year 1884-85, compared with that of the two preceding years, was as follows:—

	1882-83.	1883-84.	1884-85.
Decided in favour of Wards ...	1,633	763	700
Ditto ditto against do. ...	127	99	121
Compromised, remanded or withdrawn ...	229	70	56
Percentage in favour of Court of Wards ...	92½	88½	86½

The decrease, which is but small, is ascribed to the smaller number decided in favour of the Court of Wards in the districts of Lohardugga and Midnapore, but the cause of this again has not been explained, because none of the cases decided in these two districts were reported to the Legal Remembrancer.

7. The amount of decrees in favour of Government under realization during the year was Rs. 6,42,647 against Rs. 7,02,705 in 1883-84. The amount realized decreased from Rs. 61,862 to Rs. 20,407, and the percentage of recovery from 8·30 to 3·17 per cent. In the previous year, however, Rs. 50,000 was realized from the Canning Municipality. In the year under review nothing was realized on this account, and the municipal estates having been purchased by Government, nothing further will be realized. Out of the amount shown under realization, therefore, Rs. 5,81,280, representing the balance due from the Canning Municipality, will for the future be omitted. The chief outstanding balances were in Maldah Rs. 8,993, in Midnapore Rs. 4,716, in Bancoora Rs. 4,679, and in Chittagong Rs. 2,092.

8. In Wards' decrees the amount under realization decreased from Rs. 6,93,908 to Rs. 5,72,757, the amount realized during the year from Rs. 1,44,266 to Rs. 1,02,253, and the percentage of recovery from 20·79 to 17·85. The reduction in the outstanding balance was not due to better realizations, but to the release of certain estates from the Court of Wards, and to the omission of the Narail Ejmal estate decrees. The heaviest balances were in Rajshahye Rs. 82,403, in Durbhunga Rs. 50,107, in Lohardugga Rs. 35,360, in Jessore Rs. 28,672, in Hooghly Rs. 26,076, and in Midnapore Rs. 25,326. The Superintendent and Remembrancer of Legal Affairs observes that, generally speaking, the cause of the small percentage of realization was, he fears, an entire want of interest on the part of local officers joined to the inherent difficulty of the task among a people whose seizable property is small and easily concealed or placed beyond the reach of attachment. He was asked to state if any alterations in the rules of 1879, relating to execution of decrees in which Government is a party, is desirable, and his opinion has been received by the Lieutenant-Governor since the submission of the report. He observes—

“I am unable to suggest any improvement in the rules for execution of Government decrees which would be likely to lead to an increased collection. The small collections are not due to any deficiency in the mode of procedure, but to the inherent impossibility of

realizing (1) from persons who have no property or (2) from those who have every facility for concealing it, in the conditions generally prevailing as to the tenure of property in this country. The joint family system and prevalence of *benam* transactions offer almost insuperable obstacles to the realization of their decrees even by private persons; and Government labours under the additional difficulty of the absence of personal interest and personal knowledge in its officers."

The difficulties in the way of realization pointed out, though great, are not, the Lieutenant-Governor believes, sufficient to account for the heaviness of the arrears. Decrees can be executed against the person as well as the property of defaulters, and a Manager of a Ward's or Government estate should at least be not less familiar with the details of the estate under him than a private proprietor. It is to be feared that the want of personal interest on the part of Collectors and Managers is really if not the main, at least one cause of the unsatisfactory results of the realizations which is remarked upon year after year. The matter is no doubt a difficult one to deal with; for a Collector, and to a less extent a Manager of a Ward's Estate, is dependent on the information he receives from his subordinates. Still it may be possible to devise some means of improving the present unsatisfactory state of things, and the Board will be asked again to consider the subject.

ORDER—Ordered that a copy of this Resolution be forwarded to the Superintendent and Remembrancer of Legal Affairs, for information.

Ordered that extract paragraphs 4 and 8 from this Resolution be forwarded to the Board of Revenue, for consideration of the remarks made in paragraph 8 of the Report on the effect of the ruling of the High Court in the case referred to.

Ordered that extract paragraph 5 from this Resolution, and extract paragraphs 9 to 41 of the Report, be forwarded to the Revenue Department of this office for the issue of such orders as may be necessary, with reference to the laxity which exists in the proceedings of Revenue officers in sales for arrears of land revenue.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Government of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FIRST QUARTER OF 1885-86.

No. 554B, dated Calcutta, the 15th August 1885.

From—C. A. SAMUELLS, Esq., Officiating Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, in the Revenue Department.

I AM directed to submit the following report on the state of the salt market for the first quarter of 1885-86, comprising the months of April, May, and June 1885.

2. The quantity of salt of every description cleared during the quarter under review amounted to 21,29,421 maunds 14 seers 9 chittacks, against 26,05,445 maunds 19 seers 11 chittacks in the previous quarter and 24,78,324 maunds 18 seers 7 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 41,03,558-8, against Rs. 49,22,187-8 in the previous quarter and Rs. 47,90,905-8 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in the districts of Cuttack, Pooree, Balasore, and 24-Pergunnahs during the quarter under review from the stock of the different seasons' manufacture, and the quantities which remained in store at the close of the quarter, are shewn in table I.

TABLE I.

571 3 0	13,929 25 0	41,290 15 0	1,17,933 0 0	8,251 31 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0	2,00,747 38 0

* The difference between these figures and the corresponding figures in the statement submitted with the previous quarter's report is due to revised figures received from the Collectors.

4. The above statement shows that the total sale of excise salt during the quarter under review amounted to 1,49,875 maunds 24 seers, against 1,26,995 maunds in the previous quarter and 1,40,266 maunds 14 seers in the corresponding quarter of the previous year.

5. The subjoined table II shews, in comparison, the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter under review and the corresponding quarters of the previous two years :—

No transactions in sea-imported salt have been reported for the quarter from the ports of Pooree and Balasore.

COLONIAL AND INDIAN EXHIBITION TO BE HELD IN LONDON IN 1886.

The 29th August 1885.—The following papers are published for general information.

H. H. RISLEY,

Offg. Secy. to the Govt. of Bengal.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department (Museums and Exhibitions),— Circular No. 28Ex. dated Simla, the 12th August 1885.

RESOLUTION.

READ the following :—

Statistics and Commerce Despatch No. 49, dated London, the 14th May 1885, from Her Majesty's Secretary of State for India.

I forward 225 copies of the official report of a meeting of the Royal Commissioners for the Colonial and Indian Exhibition of 1886, held at Marlborough House on the 30th March, sent to me by Sir Philip Cunliffe-Owen, Secretary to the Commission, for distribution to intending private exhibitors in India.

2. You may perhaps consider it advisable to publish the report in the Official Gazettees for general information.

Proceedings of the first Meeting of the Royal Commission, for the Colonial and Indian Exhibition, held at Marlborough House, Monday, the 30th March 1885.

THE Royal Commission appointed by Her Majesty the Queen for the purpose of organizing the above Exhibition met for the first time on Monday, the 30th March, at Marlborough House, under the presidency of His Royal Highness the Prince of Wales. The following members of the Commission were present :—Field Marshal Commanding-in-Chief His Royal Highness the Duke of Cambridge, the Marquis of Salisbury, the Marquis of Normanby, the Marquis of Lorne, the Marquis of Hamilton, the Earl of Derby, the Earl of Dalhousie, the Earl of Cadogan, the Earl of Kimberley, the Earl of Lytton, Viscount Hury, Field-Marshal Lord Strathnairn, the Hon'ble Edward Stanhope, M.P., the Right Hon'ble Sir Stafford Henry Northcote, M.P., the Right Hon'ble William Edward Forster, M.P., the Right Hon'ble Sir Michael Edward Hicks-Beach M.P., the Right Hon'ble Anthony John Mundella, M.P., the Right Hon'ble Sir Louis Mallet, the Right Hon'ble the Lord Mayor of London, Sir Henry Thurstan Holland, M.P., Sir Daniel Cooper, Sir John Rose, Field-Marshal Sir Patrick Grant, General Sir Frederick Paul Haines, Major-General Sir Henry Creswicke Rawlinson, Lieutenant-General Sir Charles Henry Brownlow, General Sir Edwin Beaumont Johnson, Lieutenant-General Sir Henry Dominick Daly, Lieutenant-General Sir Samuel James Browne, Sir Robert George Wyndham Herbert, Major-General Sir Frederick Richard Pollock, Lieutenant-General Sir Harry Burnett Lumsden, Sir Barrow Helbert Ellis, Lieutenant-General Sir D. Macusgthen Probyn, Surgeon-General Sir Joseph Fayrer, Sir Joseph Dalton Hooker, Colonel Sir Owen Tudor Burne, Major-General Sir A. Clarke, General Sir Edward Selby Smyth, Sir Arthur Blyth (Agent-General for South Australia), Sir Charles Tupper (High Commissioner for the Dominion of Canada), Sir Francis Dillon Bell (Agent-General for New Zealand), Sir Saul Samuel (Agent-General for New South Wales), Sir William Charles Sergeant (Crown Agent for the Colonies), Sir Charles Hutton Gregory, Sir John Coode, Sir George Christopher Molesworth Birdwood, Colonel Henry Yule, Lieutenant-General Charles John Foster, Mr. John Arthur Godley, Mr. Horace George Walpole, Lieutenant-General Richard Strachey, Colonel James Michael, Colonel Arthur Edward Augustus Ellis, Mr. Charles Mills (Agent-General for the Cape of Good Hope), Mr. Arthur Hodgson, Captain Montagu Frederick Ommauey (Crown Agent for the Colonies) Mr. Robert Murray Smith (Agent-General for Victoria), Mr. James Francis Garrick (Agent-General for Queensland), the President of the Royal Agricultural Society, the President of the Institution of Civil Engineers, Mr. Henry Coppinger Beeton, Mr. Edward Birkbeck, M.P., Mr. Bertram Wodehouse Currie, Mr. William George Pedder, and Sir Phillip Cunliffe-Owen, Secretary.

HIS ROYAL HIGHNESS in opening the proceedings, said :—

MY LORDS AND GENTLEMEN.—In addressing you for the first time, I would remind you that the objects for which Her Majesty has been pleased to appoint this Commission are, briefly to organise and carry out an Exhibition by which the reproductive resources of our Colonies and of the Indian Empire may be brought before the people of Great Britain, and by which also the distant portions of Her Majesty's Dominions may be enabled to compare the advance made by each other in trade, manufactures, and general material progress.

This project, to the realization of which I have looked forward for some years, is essentially one of a National and Imperial character, differing in this respect from former Exhibitions, in which the elements of trade rivalry and profit largely predominated.

No such opportunity of becoming practically acquainted with the economic condition of our Colonies and the Indian Empire has ever been afforded in this country. The attractive display in the Indian and Colonial Courts at the Paris Exhibition of 1878 could only be witnessed by a comparatively small number of the population of these Islands, millions of whom may be expected to view and profit by the evidence which the Exhibition of 1886 will afford of the marvellous progress made by their fellow-countrymen beyond the seas.

I also trust that this gathering may serve even a higher purpose, and be the means not only of giving a stimulus to commercial interests and intercourse, but of strengthening that Bond of Union between Her Majesty's subjects in all parts of the Empire, the growth and manifestation of which are most sincerely appreciated by us all.

Whilst Her Majesty's Government have given their hearty approval to the objects for which the Commission has been appointed, they have not so far found it desirable to make any definite grant towards it. The Commission have therefore to rely entirely upon the public support of the great purposes which the Exhibition is intended to promote; and on the attractive form which it will be the endeavour of all concerned to give to it.

I cannot doubt but that, under such conditions, should no untoward events occur, the project will be more than self-sustaining.

At the same time, it has been thought prudent not to dispense with the usual provision of a Guarantee Fund, though I trust no circumstances may arise rendering it necessary to make any call on the Guarantors. To this Fund the Indian and Colonial Governments have made liberal contributions, amounting to £51,000.

I have also to announce with much gratification that the most cordial and generous response has already been made by Corporations, Firms and individuals in the United Kingdom to an invitation to participate in this guarantee. Although no formal or public appeal has yet been made, and the number invited to contribute to it has so far been limited, the list of subscribers not only embraces those whose interests may be supposed to be specially affected by the Exhibition, but comprehends every class of the community. Though but recently commenced, these further subscriptions already amount to £77,600, making a total Guarantee Fund of £128,600 to the present date.

I feel sure that you will unite with me in the expression of cordial thanks to those who have so promptly and liberally come forward to our assistance. It is a gratifying proof of the interest which exists among all classes at Home and in the outlying countries of the Empire, and of the desire felt by them to embrace every occasion to promote the common advancement and prosperity of the United Kingdom and its Colonies and Dependencies.

Considering the inconvenience which would have resulted to the Members of the Commission had they been summoned to meet at an earlier date, and in view of the immediate assembling of the various Colonial Legislatures, whose co-operation had to be obtained, I deemed it necessary, in order that full time might be given for the preparation of contributions, to take certain preliminary steps, which I trust will meet with your approval.

I have accordingly to announce that arrangements have been made by which the buildings and grounds at South Kensington, where the Fisheries and Health Exhibitions were recently held, have been placed at the disposal of this Commission on fair terms, and the buildings can be made available for our purposes at a moderate outlay.

I therefore caused plans of these grounds and buildings to be prepared, showing the space which the Commission could assign to India and the various Colonies, and the ~~arrangements~~ which were deemed most convenient. These were communicated to the Government of India, to the High Commissioner for the Dominion of Canada, to the various Agents-General of the Colonies, and, through the Colonial Office, to the Crown and other Colonies, and have met with their approval. Similar communications have been made through the Secretary of State for the Colonies direct to the various Governments, and to the Secretary of State for India, with like results.

In the despatch which contained this information, I also stated that it was considered advisable that, in place of any awards being granted by juries, as has been the case in previous Exhibitions, Commemorative Medals only should be given to each exhibitor. The object in suggesting this change was that as some colonies, from their age and circumstances, were more advanced than others, those in their infancy should not be placed at an undue disadvantage in an Exhibition from which all thoughts of trade rivalry should be excluded.

I am pleased to say that answers have been received which show that the suggestions made on this and other matters have been favourably accepted; and to inform you that the project of holding the Exhibition has been everywhere received with the utmost cordiality.

I trust that these preliminary arrangements may meet with your approval.

I have also to submit, for your consideration, the general method of administration which I recommend should be adopted.

As President of the Royal Commission, it is my intention personally to take the same active part in the work as I did at the Paris Exhibition of 1878.

The details of the executive duties will devolve on Sir Philip Cunliffe-Owen, whose ability and experience have so often been tested with satisfactory results, and who has also been entrusted by the Indian Government and certain of our Colonies with executive duties on their behalf.

I have also thought it desirable to nominate a Finance Committee for the purpose of controlling and regulating the expenditure of the Commission and guarding the interests of the guarantors. This Committee, it is proposed, shall consist of the following members of the Commission, who have kindly placed their services at my disposal. *viz.* Sir John Rose, Bart. (Chairman), Sir George C. M. Birdwood, Mr. Edward Birkbeck, Sir Barrow Helbert Ellis; Sir William Charles Sargeant.

I will ask you to confirm the appointment of these gentlemen.

As arrangements advance, it may be necessary for me to recur in matters of special importance to your counsel and aid.

While no effort will be spared to render the Exhibition worthy of the primary objects it is intended to promote, as well as to insure its attractiveness to the community, the guarantors may be assured that, subject to the attainment of these ends, no needless outlay will take place; but that, on the contrary, the expenditure will be kept within proper and legitimate limits. As an earnest of this endeavour, I have directed full and detailed estimates of the different heads of proposed expenditure—guided by the experience of former Exhibitions—to be prepared for submission, first, to the Finance Committee, and subsequently for my own approval.

Though it is impossible to foresee what eventualities may arise, I trust no obstacles may occur to prevent this Exhibition from being not only self-sustaining, but as successful, financially, as those of late years have been.

It has been suggested that advantage should be taken of the great numbers who will doubtless visit England during the Exhibition from the Colonies and from India, to procure for them special facilities for visiting the great manufacturing centres and chief places of interest in Great Britain, not only as an expression of welcome, but that they and we may profit by a comparison of their own with the more matured commercial systems of the Mother-Country, and that by bringing manufacturers, producers and consumers together, an impetus may be given to the general extension of industry and trade.

Negotiations are in progress to effect this object, which I hope may result, not only in mutual advantage, but in proving to our fellow subjects that they are as welcome elsewhere in Great Britain as I am sure they will be in the Metropolis.

In conclusion, let me express the hope that this great undertaking, and the many occasions for friendly intercourse with our fellow subjects from India and the Colonies which it will afford, may convey to them the assurance that, while we are deeply moved by the spirit of patriotism they have lately shown in desiring to bear their share in the graver trials of the country, we, on our part, wish to participate in every effort to further and develop their material interests, interests which we feel to be inseparably bound up with the prosperity of the Empire. We must remember that, as regards the Colonies, they are the legitimate and natural homes in future of the more adventurous and energetic portion of the population of these Islands. Their progress and their power of providing all that makes life comfortable and attractive, cannot, therefore, but be a matter of serious concern to us all. And, as regards India, the increasing knowledge of that vast Empire, and the rapid and easy means of communication to all parts of it which now exist, render its remarkable and varied products, and its social and political condition, a source of yearly increasing interest and importance to us.

For the attainment of the purposes I have indicated, I am sure I may rely on your friendly co-operation and assistance in your several localities, and within the sphere of your individual influence. Although it has been impossible, from the pressure of their duties elsewhere, for some members of the Commission to be present at this meeting, I am gratified by the assurance from them that we may none the less rely on their practical and earnest assistance on every occasion in furthering the work which has been entrusted to us, and achieving the important ends which I trust may flow from its successful accomplishment.

It only remains for me to express my cordial thanks to you for your kindness in attending here to-day, and my confidence that I shall continue to receive the same measure of support which it has been my good fortune to obtain from many of you on former occasions.

Sir Philip Cunliffe-Owen then read the correspondence relating to the appointment of the Commission and the participation of the various Colonies, all of which were most willing to take advantage of this opportunity of displaying their resources and progress, and gaining a larger knowledge respecting their sister Colonies.

A preliminary list of guarantors was also read, the amount of the Guarantee Fund being already £128,600.

THE EARL OF DERBY said:—I have been asked to move a resolution, and I do it with great pleasure, but also very briefly, because argument is superfluous where, I presume, we are all of one mind, and it would be a mere waste of time to relate the circumstances with which you are no doubt familiar which should induce you to accept this resolution. There was a time, a few years ago, when it was said Exhibitions were played out, and that it would be well, for a time at least, to discontinue them. I do

not know whether that feeling was ever justified by the facts; it may have represented a passing phase of opinion in London, but it is not the case now. We have had recent experience, and we have seen that, whatever the ostensible objects of the Exhibition, whether appliances of health, fisheries, forestry, or whatever the subject may be, the interest that is felt in these Exhibitions is unabated and ever-increasing. The numbers frequenting them seem to increase every year, and if they are well conducted, there can be no doubt they will be a financial success. If this be true, generally, it is still more likely to be true in the case of the Exhibition which is to be held next year. I think we must all see and feel that there never was a time in the history of the country when so deep and general an interest was taken in the affairs of the Colonies; and I think also we all feel that, living as we do in a small and overcrowded Island, it is both our duty and our interest to do all in our power to bring before the minds of our fellow countrymen those vast countries beyond the sea, in which those who have comparatively small opportunities of making a successful career in this country may have a better chance in another state of society. After the correspondence which has been read, it will not be necessary for me to recapitulate the details of what has passed, especially as His Royal Highness has been kind enough to state what is most important on that point. I will only say that to me, and those with whom I have acted departmentally, and I think I may say the Agents of the Colonies, it has been a source of pride and satisfaction to be able to help according to the measure of our power in promoting the wishes of His Royal Highness. I think, although the matter is not completed, and therefore it is undesirable to enter into details, that our colonial fellow subjects, both as regards governments and communities, have responded to the appeal made to them in that liberal and patriotic manner we have every reason to expect. You have heard the list of guarantors read; it is, I believe, an ample one for all purposes, and no doubt can be increased if necessary; and, looking at the increased interest in colonial affairs, and the way the Colonies have taken the matter up, I think there is no doubt that this Exhibition will be a great success. The purpose of the resolution I have to propose is that the Royal Commission may endorse the steps taken by His Royal Highness; and I think I may say that no passage in His Royal Highness's address has given so much satisfaction as that in which he gives us an assurance that he will take the same position in this Exhibition as in that of 1878.

THE EARL OF KIMBERLEY seconded the resolution, and said:—As regards India, I have this Exhibition much at heart. There is, perhaps, nothing more desirable for India than that its products and industries should be well known in this country, although we have much more to learn from than to teach them. Their beautiful manufactures which they have produced for so many ages have proved that there is a knowledge of many branches of art which it would be a thousand pities should be diminished under our rule. I have often been struck with the calamity of the introduction of our taste into Eastern arts and manufactures; for their taste is far better than ours, although we have no doubt engineering knowledge and skill and the command of capital; and I cannot conceive of any advantage greater than that the two countries should be brought together. The Government of India will itself undertake the collection and management to a great extent of what is to be sent into this country. You will see from the immense size of our Indian Empire, and the position of the Government there, that it is much better this should be taken in hand by the Government. It is a great satisfaction to me to concur entirely with the proposals made by His Royal Highness, and with my noble friend, that this Exhibition will be a remarkable success.

The following is the resolution, which was carried unanimously: "That this Commission entirely approves of the arrangements made by His Royal Highness the Prince of Wales, the Executive President, and now reported by him in detail: and they desire to convey their cordial thanks to His Royal Highness for the interest he has shown in the undertaking, and their appreciation of the judicious steps taken by him to insure its success. The Commission further desire to express their cordial appreciation of the liberal and gratifying contributions already made to the Guarantee Fund, and their warm thanks to the subscribers."

THE PRINCE OF WALES:—I feel very grateful to Lord Derby for the kind way in which he has moved this resolution, and to Lord Kimberley also for the kind expressions that have fallen from him, and for the hearty and unanimous approval of this Commission, which I look upon as a vote of confidence in myself. I may say that to the utmost of my power and endeavour I will do all I can to further the Exhibition, and I feel sure that I shall have the hearty support and concurrence of the distinguished gentlemen of whom I see so many around me. I thank you again for having listened to the address I read to you, and only hope that no untoward event may occur between now and next year to prevent this resulting in perhaps the finest Exhibition that has ever been held.

The meeting then terminated.

COLONIAL AND INDIAN EXHIBITION.

(LONDON, 1886.)

PRELIMINARY LIST OF GUARANTORS.

Amount of Guarantees up to the 30.h March 1885. £ 128,600.

£	£

ORDER.—Ordered that the report of the proceedings of the first meeting of the Royal Commission in connection with the Colonial and Indian Exhibition be published for general information in the Supplement to the *Gazette of India*, and that copies be forwarded to the several Local Governments and Administrations noted on the margin for publication in the Local Gazettes, and for distribution in the manner desired by the Royal Commission.

By order,

C. S. BAYLEY,

Under-Secretary to the Govt. of India.

Rainfall, Weather, and State and Prospects of the Crops

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal. as reported to Government during the week ending the 29th August 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERMAN DIV.	1 Burdwan, Aug. 29 '85	8.40	Rain every day with occasional sunshine. Some damage is caused to <i>aus</i> crop by floods. Price of rice 10 to 14½ seers per rupee. Health generally good.
	Culna ...	10.42	
	Cutwa ...	7.20	
	2 Bankoora, " 29 "	7.75	Weather—warm with occasional sun and showers. Crops on the ground promise well, but some injury to low land paddy is apprehended from the excessive downpour during the week. Considerable damage to sugarcane is reported from the sub-division of Bishenpore. Public health good.
	Bishenpur ...	14.54	
	3 Beerbhoom, " 29 "	11.74	Sufficient rain in all parts of the district. Transplanting nearly finished. Prices have somewhat risen. Cholera has abated.
	Rampore Haut ...	5.88	
	4 Midnapore, " 29 "	7.80	Weather—very wet and stormy. Disastrous floods in the Ghatal and Sudder sub-divisions; nearly seventeen inches of rain in Tamlook. Crops much damaged.
	Hooghly, " 29 "	17.33	
	Serampore ...	7.58	Excessive rain threatens to cause considerable injury to crops, especially in Jehanabad sub-division. Many houses injured by the heavy rain. Health fair.
	Jehanabad ...	11.46	
	5 Howrah, " 29 "	18.54	Weather—chiefly rainy. Much damage has been done to the crops, especially in the south and west, by the floods. The extent of damage cannot be ascertained till the floods subside.
	Oolooberiah ...	6.91	
	Oolooberiah ...	11.08	
<i>Central Districts.</i>			
PRESIDENCY DIV.	6 24-Pergha, Aug. 29 '85	10.37	Heavy downpour of rain in all parts of the district. Prospects of ripe <i>aus</i> have become gloomy by reason of the heavy fall of rain. <i>Amun</i> on low lands has also suffered from the accumulation of water. Public health good except for usual fever.
	7 Nudda, " 29 "	4.37	Weather—hot and cloudy with occasional rain. Harvesting of <i>aus</i> paddy in progress. Paddy on chur lands has been submerged. Rivers are rising day by day, and have damaged the crops in some parts of the district, but on the whole the reports are not so bad as were expected.
	Kushtea ...	3.41	
	Meherpur ...	3.23	
	8 Chundanga, " 29 "	2.10	Heavy rain (10.6) in Natkhira sub-division; in other sub-divisions moderate rain; some sunshine at close of the week. <i>Aus</i> crop ripening; cutting delayed by rain, causing rise in price. Cultivation of <i>amun</i> continues. Fever reported in Bagerhat, otherwise public health fair.
	Ranaghat ...	7.43	
	9 Khoolua, " 29 "	2.25	Weather—rainy. Recent heavy rain and rise of rivers have caused some damage to rice crop. If weather becomes favourable, prospects of crops will continue good. Cases of fever here and there.
	Jessore, " 29 "	2.22	
	Jhenida ...	2.28	
	10 Magoora, " 29 "	2.56	Weather—cool, with heavy rain almost daily. The prospects of the <i>aus</i> crop are now very unfavourable, as very large areas where it was growing have been submerged by the floods before the crop was ripe. The floods have done unusually great damage owing to a breach in the Bhagirathi embankment at Lolitakuri. The <i>amun</i> crop is now doing fairly well. Public health good. Common rice is selling at from 10 to 12 seers per rupee.
	Narail ...	2.71	
	Bongong ...	14.18	
	11 Moorsheebad, " 29 "	7.36	Rain in all parts of the district except in Kallagunge. State and prospects of sugarcane good. <i>Bhadai</i> and jute are being harvested. Cultivation of <i>amun</i> going on very well. Itice is selling at from 1½ to 20 seers per rupee.
	Lalbagh ...	8.91	
	Kandi ...	4.90	
RAJSHAHY DIV.	12 Jungipore, " 29 "	6.02	Weather—hot and rainy. Harvesting of <i>aus</i> paddy, jute, &c., going on with expectation of fair outturn. Fever rather prevalent. Cholera dying out in Nowgong, reported as confined to one village. The disease is also reported from thana Lannore.
	13 Dinagepore, Aug. 28 '85	1.78	
	Rajshahye, " 29 "	5.42	
	Nattore ...	7.85	Weather—clear and very hot by day. Harvesting of <i>aus</i> paddy almost brought to a close; transplanting of <i>amun</i> continues. Prospects of <i>amun</i> and other crops on the whole good. More rain is wanted in the Kurigram sub-division where the prospects of <i>amun</i> crops are not promising. Fever and bowel-complaints prevalent.
	Nowgong ...	1.38	
	14 Rungpore, " 29 "	0.96	Rainfall singularly scanty, and weather very hot. A few slight earth tremors, but no quakes. Prospects of crops continue favourable. Rain wanted to some extent. Public health fair.
	Nilphamari ...	0.23	
	15 Guibanda, " 29 "	1.20	Weather—hot and rainy in the early part of the week. A very heavy crop of <i>aus</i> being harvested where not injured by floods; an excellent promise of <i>amun</i> ; jute crop good, but rather late. Public health good.
	Kurigram ...	0.98	
RAJSHAHY DIV.	16 Bogra, " 29 "	0.49	A break in the rains. The harvest of rice, maize, millets, potatoes, and jute in progress is very satisfactory, and prospects are most favourable.
	Pubna, " 29 "	2.04	
	Serajgunge ...	1.90	Weather—cloudy at times with light rain. Prospects of crops continue satisfactory. Harvesting of <i>aus</i> nearly over. Transplanting of late rice continues. Cholera still prevails in thana Mynagoree and cattle-disease in the Alipur and Falacotta tehsils. Price of rice unchanged.
	17 Darjeeling, " 29 "	6.82	
	Julpigoree, " 29 "	1.00	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—contd.			
<i>Eastern Districts.</i>			
Dacca Division.	18 Dacca, Aug. 29 '85	2.39	Weather—seasonable. Harvesting of <i>aus</i> paddy and jute continues. <i>Aman</i> paddy thriving. Prospects of crops and public health good.
	Manickgunge	2.42	
	Munshigunge	4.62	
	Naraingunge	3.85	Weather—cloudy with occasional heavy showers. <i>Aman</i> , jute and sugarcane crops promise well. Public health good.
	19 Farreepore, „ 29 „	0.34	
	Goalundo	6.55	
	Madaripore	9.47	Weather—seasonable with incessant rain. <i>Aus</i> paddy has been nearly harvested. Transplanting of <i>aman</i> is nearly over. Public health generally good.
	20 Backergunge, Aug. 27 „	7.13	
	21 Mymensingh, „ 28 „	1.47	
	Jamalpur	1.50	
	Kishoregunge	1.35	
Chittagong Divn.	Attia	4.15	Weather—seasonable. State of crops and public health generally good. Harvesting of jute and <i>aus</i> crops continue.
	Netrokona	1.95	
	22 Chittagong, Sep. 1 '85	1.52	
	23 Noakhali, „ 28 „	10.58	Weather—cloudy and cold during the early part of the week. Hot and close the last two days. Prospects of crops promising. Fever shows indications of abating; public health otherwise very good.
	Fenny	9.22	
	24 Tipperah „ 27 „	5.58	
	Chandpore	11.52	Weather—days cloudy and rainy throughout the week; nights clear. Rain in moderate quantity every day has much improved paddy crops in <i>joom</i> and <i>plina</i> . Early <i>joom</i> paddy is ripening in some parts of the district. Cotton and sugarcane doing well. Fever in all parts.
	25 Chittagong Hill Tracts „ 25 „	6.25	
	Hill Tipperah, „ 26 „	4.51	
Patna Divn.	26 Patna, Aug. 29 '85	0.92	Weather—hot and cloudy. Transplanting of paddy is in progress, but more rain is wanted. <i>Murwa</i> and <i>makai</i> are coming into ear. Cholera still reported from Barh and Behar sub-divisions.
	27 Gya, „ 29 „	11.05	
	28 Shahabad, „ 29 „	4.41	
	Buxar	9.17	Weather—cloudy. <i>Murwa</i> and <i>makai</i> nearly ready. <i>Bhadai</i> crops injured by excessive rain. Transplanting nearly completed. Cholera reported from some stations. Prices stationary.
	Bhabhua	4.62	
	Sasaram	3.67	
	29 Durbhunga, „ 29 „	2.13	Weather—seasonable. Prospects of <i>bhadai</i> excellent except in dearah lands in the tract between Arrah and the Sonc where inundation and in Sasaram where incessant rain have destroyed the crops to a considerable extent. Transplanting of paddy in progress. Fever and cattle-disease reported from Sasaram. Cholera abating.
	Tajpur	2.92	
	Madhubani	0.71	
Bhagalpur Divn.	30 Mozufferpore, „ 29 „	1.64	Weather—occasionally cloudy and close. Prospects of <i>bhadai</i> crops very favourable. Transplanting of paddy seedlings still going on, but more rain wanted in places. Prices continue almost stationary. A few isolated cases of cholera reported from Madhubani; otherwise public health generally good.
	Hajipur	2.26	
	Sitamarhi	3.60	
	31 Sarun, „ 29 „	5.05	Weather—cloudy and showery. Maize in ear, and <i>shama</i> , <i>kanni</i> and <i>murwa</i> being harvested. Floods have done considerable damage both to <i>bhadai</i> and <i>aghani</i> crops; otherwise prospects good. Sporadic cholera severe in the district; it has nearly disappeared from Mozufferpore town.
	Sewan	1.27	
	Gopalgunge	1.34	
	32 Champaran „ 29 „	2.91	Weather—cloudy and rainy with intervals of sunshine. Sufficient rain all over the district; state and prospects of crops continue good. <i>Murwa</i> , <i>makai</i> , <i>shama</i> , and <i>kanni</i> coming into ear. Cholera more or less severe reported from head-quarters and sub-divisions; it is, however, abating in the town of Chapra.
	Bettiah	3.22	
	33 Monghyr, Aug. 29 '85	1.94	
Bhagalpur Divn.	Begusarai	5.13	Weather—fair and cloudy alternately. Prospects of crops continue favourable. <i>Makai</i> coming in to ear. Transplanting of paddy seedlings going on. Prices stationary. Cholera still reported from Modihari and Bettiah towns and the interior.
	Jamai	7.79	
	34 Bhagalpore, „ 29 „	0.93	
	Muddehpore	2.20	Weather—cloudy with occasional heavy showers. <i>Bhadai</i> crop on dearahs and low lands adjacent to the Ganges has been more or less destroyed. Prospects of <i>aghani</i> crop good. Transplanting nearly completed. Prices show a tendency to rise. Cholera still prevalent.
	Soojole	1.76	
	Banka	6.82	
	35 Purneah „ 29 „	2.33	Weather—showery at Sudder. <i>Murwa</i> and <i>bhadai</i> harvest has begun in the north; outturn very good. More rain wanted in the north for transplanting. <i>Janera</i> somewhat damaged by excessive rain in Banka where some fine weather is required. Prospects of winter rice good. Cholera still very bad in Banka.
	Kissengunge	1.15	
	Arrareah	1.58	
Bhagalpur Divn.	36 Maldah „ 29 „	6.83	Weather—fair with occasional showers. <i>Bhadai</i> paddy in low land in the dearah tracts has been nearly lost. Prospects of <i>kaimanta</i> paddy good. Coarse rice selling at 12 seers per rupee at English Bazar.
	Chanchal	2.02	
	Gazole	5.49	
	Shibgunge	6.55	Heavy rain daily till the 27th, since then the weather has moderated and there has been some sunshine. The continued heavy rain has somewhat injured low-lying <i>ghan</i> lands; on higher lands the crop is splendid. A large area of rice land has been inundated in Kishinhal, and the crops nearly, if not altogether, destroyed. The <i>janera</i> crop is considerably shorter than last year. Cholera still very prevalent in Pakour and Deoghur.
	37 Southal Pergha „ 29 „	5.63	
	Deoghur	6.18	
	Godda	3.77	
	Kujuchal	5.78	
	Jamtara	6.83	
	Pakour	5.61	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack,	Report not received.
	39 Pooree, " 27 "	1.24	Weather- seasonable. Puddling, transplanting and weeding of <i>sarad</i> paddy going on. <i>Boali</i> or early rice is in ear, and other miscellaneous crops are thriving. Common rice is selling at an average of 17 seers 13 chittacks per rupee in the Sudder sub-division, and 17 seers 15 chittacks in the Khoorda sub-division. Cases of cholera reported from the interior. Public health is generally good.
	Khoorda " ...	2.36	
	40 Balasore " 28 "	4.01	Weather—cloudy and rainy. Prospects of rice crop continue favourable. Rivers rose considerably during the week, but no injury to crops reported. Public health good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
41	Hazaribagh. Aug. 28 '85	3.38	Weather—seasonable. Incessant and heavy rain everywhere; a break is now required. <i>Bhadoi</i> has been injured in places owing to excessive rain. Transplanting of rice approaching completion and crops promise well. Cholera still very prevalent in several thanas. Small-pox and fever also reported from a few villages.
42	Lohardugga. " 29 "	5.16	Very heavy rain during the early part of the week; rivers in full flood and communication with many parts of the district cut off in consequence 28th and 29th were fine days, but sky still cloudy and threatening. <i>Bhadoi</i> crop has been damaged a little, but on the whole prospects are fair. Cholera still prevails in Ranchee and Mandar, otherwise public health good.
43	Singbhoom, " 28 "	7.75	Weather—very wet throughout the week. There has been very heavy rain during the week, but to-day (28th) it has cleared up. Bright weather wanted for the ripening of <i>bhadoi</i> crops. Up to date all crops are reported to be doing excellently. Prices easy and general health good.
44	Manbhoom, " 29 "	9.12	Weather—wet. Fine weather now required for all crops after the heavy rain of the week. <i>Bhadoi</i> somewhat damaged by excessive rain. Prices falling

The mean pressure of the seven days ... 29.547
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.621

The total number of hours of bright sunshine ... 13.4
The maximum possible number of hours of sunshine ... 88.7

The mean temperature of the seven days ... 80.9
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83.1
The extreme variation of temperature ... 12.4
The maximum temperature ... 88.1

The highest velocity of the wind in one hour ... 18

The highest pressure of wind on one square foot ... 3

The mean relative humidity ... 90
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 86

The total fall of rain from 23rd to 29th August 1885 ... 9.63
The average fall of the corresponding period for 24 years, S. G.'s Office ... 2.71
The total fall from 1st January to 29th August 1885 ... 52.45
The average fall of the corresponding period for 24 years, S. G.'s Office ... 47.86

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h., 10h., 16h., and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables compiled in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, d drizzling rain, t thunder, ● continued rain.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 31st August 1885.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 28TH OF AUGUST 1885.

The present week has been an exceedingly important one from a meteorological point of view, for it has brought excessively heavy rain to South-West Bengal, Chutia Nagpur, East Bengal and South Behar, while it has also brought good general rain to North Behar; the only districts which have received comparatively very small falls being Orissa and North Bengal. At the close of the previous week there was a small barometric depression in North Bengal, the centre of which on the Friday was not far from Maldah. It was, however, a feeble one, and it disappeared during that day, and with a very rapid fall of the barometer which took place on Saturday, the 22nd, in South-East Bengal, a new barometric depression was formed in this district with its centre near Dacca. The fall in this district was very rapid, and at Jessore, Chittagong and Comilla the decrease exceeded a tenth of an inch. There was on this day a very decided convergence of the winds towards the area of low pressure in East Bengal, and with the heavy rainfall which occurred in this district at the same time, the small cyclonic storm became decidedly more intense, and commenced to move in a westerly direction, giving particularly heavy rain in its path. At the same time, at the westerly stations of the Province, westerly winds were blowing, and at the northern stations easterly winds were reported, so that a considerable amount of interaction was taking place, which caused heavy rainfall. On this day then the eastern and southern districts of the Province were receiving heavy rainfall due to the depression which was forming in South-East Bengal, and the northern and western districts were receiving heavy rain due to the interaction of winds above noted. The depression moved in a westerly direction, and on Sunday, the 23rd, its centre was between Jessore and Calcutta, and it was giving on this day exceptionally heavy rain to the districts through which it was passing. On the Monday the small storm had advanced into the south of Chutia Nagpur, and its centre was apparently almost due south of Hazaribagh, though it was apparent that the storm was becoming more feeble, and on Sunday, the 25th, it had moved to the north-east corner of Chutia Nagpur, and it was then extremely feeble and was evidently rapidly breaking up. The formation and advance of this storm were of course the main features in the meteorology of the first four days of the week. Round the small storm there was the usual well marked cyclonic circulation of winds, and with the advance of the storm into the interior, strong south-easterly and easterly winds set in over the Province. The storm was only of small intensity with regard to the wind velocities which accompanied it, but with regard to the rainfall it brought, it was of considerable importance, particularly during the first two days of its existence, as will be seen from the following record of rainfall of stations affected by it. Thus on the 22nd, Jehanabad in the Hooghly district received 12·5 inches of rain, Chittagong 4·58 inches, Goalundo 5·5 inches, and Furreedpore 4·15 inches. On the 23rd, Bongong (in the Jessore district) reported 10·31 inches, Raipur (Bankoora district) 7·57 inches, Anda (Bankoora district) 7·38 inches, Khatra (Bankoora district) 7·1 inches, Bankoorah 10·33 inches, Mohesreka (Howrah district) 6·89 inches, Calcutta 7·84 inches, Midnapur 8·64 inches, and Tumlook (Midnapur district) 8·15 inches.

As has been before stated, the small storm had ceased to have any marked effect on the meteorology of the Province on the 25th instant, and on the following day pressure was falling in East and North Bengal, while in other districts it was rising. There appeared on this day to be a distinct tendency to again form a low pressure area in South Bengal, for in South-West Bengal pressure was 0·05" below the normal, and at Calcutta the defect was 0·06", while in other districts pressure was nearly normal, and at Cuttack it was even above normal. On this day, too, with the complete disappearance of the first depression from Behar, a westerly wind current set in at the western stations, producing decided interaction with the easterly and south-easterly winds previously blowing, and heavy rain was again reported from the western stations in Behar, Chutia Nagpur and in South-West Bengal. The tendency to the formation of a barometric depression in South Bengal became much more marked on the 27th, and a small and feeble depression was distinctly formed over the Sunderbans to the south-east of Calcutta, which was attended by the usual cyclonic circulation of winds. On Friday, the 28th, the depression had rather increased in area, though it had not intensified to any material extent, and it was moving in a northerly or north-westerly direction, the lowest pressure being reported from Calcutta, and the depression being apparently only a short distance to the south-east of this station. This storm also, during its formation and advance, brought up light to moderate rain to the southern districts. From this short summary of the meteorological conditions of the week, it will be seen that throughout the week heavy rainfall has been brought to East and South-West Bengal, and also to South Behar and Chutia Nagpur. Also that North Behar and North Bengal have to a certain extent been out of the sphere of action of the causes producing increased rainfall, while in the case of Orissa the moist winds were actually drawn a way from this district for the greater part of the week, owing to the indraught towards the two depressions above described, and thus Orissa has received comparatively a very small rainfall.

The variations of pressure during the week have been rather large, and they have necessarily to a great extent followed the formation and movement of the two depressions previously described. For the previous week pressure had been about 0·03" in defect on the average of the whole Province, the defect having been fairly evenly distributed. On the 22nd there was a rapid fall of pressure in South-East Bengal owing to the formation of the depression near Dacca, and at this station pressure on this day was no less than 0·16"

was only 0·01". With the westerly movement and development of the storm, on the 23rd at Jessore pressure was no less than 0·23" in defect, and at Calcutta it was 0·22", while in Chutia Nagpur the defect was less than 0·01". The effect of the depression was still marked on the 24th, and pressure over the whole Province was in defect by 0·13", but this was followed on the 25th by a rapid increase of pressure in the southern districts, where in many instances the rise was more than a tenth of an inch, but still pressure was below the normal. On the 26th pressure again fell at the southern stations, owing to the formation of the second area of low pressure, and on the 27th and 28th, notwithstanding that pressure was rising rapidly in the northern and western districts, it continued to fall in South Bengal, and thus the depression became rather deeper. The average defect for the whole Province for the week has been nearly 0·08", and, as may be expected, the defect has been largest in South-West Bengal, where at Calcutta it was 0·12", at Berhampore 0·1", and at Jessore the defect has been 0·11".

Temperature during the previous week was very distinctly in defect of the normal, and with the heavy rainfall which has prevailed during the present week, this defect has been rather increased, and the average temperature over the whole Province is 2° below the normal. At many stations during certain days of the week temperature has been comparatively very low, and thus on the 28th at Gya and Hazaribagh it was no less than 6° below the normal.

Winds have, as may be expected, been decidedly abnormal in most districts throughout the week. The prevailing features have of course been a well marked cyclonic circulation, at first round the depression which formed near Dacca, and then travelled to the north of Calcutta, thence into the south of Chutia Nagpur, and from this into the north-east corner of that Province, and with its advance the circulation of winds was also transferred, and in its rear rather strong south-easterly winds set in over the Province. With the disappearance of the depression, and with the formation of the second depression in South Bengal, a fresh cyclonic circulation of winds was set up, all the districts except perhaps a few stations in North Bengal and part of Behar being thus affected, and this distribution of winds continued till the close of the week.

The distribution of rainfall has already been very briefly noticed, and its extraordinary heaviness during the week will be seen by comparing the actual falls in each meteorological division with the normal falls. South-West Bengal has received an average rainfall of 8·84 inches against the normal fall of 2·19 inches, or more than four times the normal amount. Chutia Nagpur has received 5·83 inches instead of the normal fall of 2·54 inches, and has thus received not quite twice its usual amount. East Bengal reports 4·42 inches against the normal 2·74 inches, again nearly twice the usual quantity. South Behar has received 5·05 inches, while the normal quantity is 2·15 inches, again rather less than twice the normal amount. In North Behar the average rainfall has been 2·31 inches against 2·20 inches, which is a little more than normal, and the other two districts, North Bengal and Orissa, have received falls below normal; North Bengal reporting 2·04 inches against the normal 3·48 inches, and thus receiving only 58 per cent. of the normal, while Orissa received 2·06 inches, instead of the normal 2·16 inches, which is 95 per cent. of the normal. The number of rainy days in the various districts has also been exceedingly large, and even in those districts where the rainfall has been in defect, the number of rainy days in the week has been distinctly in excess. For the whole Province the average number of rainy days for the week has been 5·3 as against the normal number of 3·8 days.

During the week there have been some exceptionally heavy falls, particularly in connection with the first depression on the 22nd, 23rd, and 24th. Some of the heaviest rainfalls have been given under the meteorological summary for the week, and it will not be necessary therefore to repeat them. Although the numbers given above represent very well the exceptionally heavy rainfall over the large meteorological districts, yet they scarcely represent in some cases the full intensity of the falls. These may best be seen by taking up the smaller districts, and here prominent among the excess falls in the South-West Bengal division stands Midnapore, which district has received 15·77 inches against the normal amount of 2·67 inches. The district round Calcutta, including 24 Pargunnahs, Howrah and Hooghly has received an average of 11·47 inches against the normal 1·97 inches. The district of Bankoora reports an average of 11·79 inches against the normal 2·13 inches, and Berhampore district 7·48 inches against the normal 2·25 inches. In South Behar the district of Gya reports 7·56 inches against the normal 2·32 inches, and the Sonthal Pargunnahs 6·01 inches against 2·16 inches. In North Bengal, which on the whole has received a decidedly defective fall, the district of Rajshahye reports 6·40 inches against 2·36 inches, and is thus largely in excess, while on the other hand the Rungpore district has only received 0·84 inch against the normal 3·18 inches. With the excessively heavy falls just mentioned, it is of course no wonder that floods are being reported from various districts.

The excessively heavy rainfall for the week may be seen in another way by quoting the stations receiving exceptionally large amounts. Thus the following stations have received more than 15 inches of rain during the week:—In South-West Bengal, Midnapore, and Jehanabad, and in East Bengal, Cox's Bazar. The following stations have received between 15 and 12 inches of rain during the week:—In South-West Bengal, Ghatol, Tumlook, Bhagwanpore, Canning Town, Calcutta, Baraset, Bankoora, Khatra, Anda, and Bongong. The following stations have also received falls of between 8 and 12 inches during the week:—In South-West Bengal, Saugor Island, Devog, Heria, Garbetts, Barrackpore, Dum-Dum, Busseerhat, Howrah, Mohesreka, Serampore, Culna, Burdwan, Bishenpore, Maliara, Kotalpore, Gungajalghati, Raipore, Sonamukhi, Satkhira, Lalbagh, and Azimgunge. In East Bengal Chittagong received 9·87 inches. In South Behar, Gya received 11·05 inches, and in Chutia Nagpur, Silli, Barhi, Baharagura, Purulia, and Jhalda received amounts

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 28th of August 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.										
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.

"	29th	82.0	88.9	10.1	78.8	79.6	.976	78.5	89	0.70

The mean temperature of the seven days 80.1

The extreme variation of temperature 13.2

The maximum temperature 89.2

The mean relative humidity 93

The total fall of rain from 23rd to 29th August 1885 10.34

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 31st August 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

THE returns of the principal Municipalities in Bengal presented, during the week ending 15th August 1885, the birth and death-rates of 27·5 and 48·1 per 1,000 of population, respectively, as opposed to 23·8 and 45·6 per 1,000, respectively, during the preceding week ending 8th August, indicating a considerable advance in the registration of both events.

2. The Municipalities which exhibit the highest results in birth and death registration are—

<i>Births.</i>				<i>Deaths.</i>			
			Ratio per mille.				Ratio per mille.
Bhagulpore	57·9	Chupra	153·3
Gya	46·5	Gya	100·4
Patna	44·5	Monghyr	97·6
Comillah	42·4	Bhagulpore	66·1
Chittagong	35·2	Patna	65·2
Durbhanga	33·1	Mozufferpore	58·4
Monghyr	31·6	Arrah	40·7
				Suburbs of Calcutta	38·3
				Puri	37·8
				Burdwan	36·6
				Durbhanga	35·4
				Chittagong	32·8

3. The following table denotes that, as compared with the outcome of the preceding week, there was a considerable enhancement of mortality from cholera with a sensible diminution in that from fever, and that the casualties from the rest of the death-causes, excepting injury, exhibit only fractional variations:—

				Ratio per mille during the weeks ending—	
				15th August 1885.	8th August 1885.
Cholera	13·4	10·6
Small-pox	·8	·2
Fever	14·1	16·0
Bowel-complaints	7·6	7·2
Injury	·4	·4
Other causes	11·8	11·2

4. Excluding injury, the mortality from which was not noticeably severe anywhere, the rest of the death-causes proved conspicuously fatal to life in the following Municipalities:—

<i>Cholera.</i>		<i>Small-pox.</i>		<i>Fever.</i>		<i>Bowel-complaints.</i>		<i>Other causes.</i>	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Chupra	108·4	Durbhanga	11·8	Gya	26·6	Patna	16·4	Gya	26·0
Monghyr	54·2	Chupra	4·9	Bhagulpore	26·2	Gya	13·7	Chupra	24·4
Gya	34·1			Arrah	22·7	Hughli	13·4	Bhagulpore	16·3
Mozufferpore	21·9			Burdwan	21·4	Monghyr	11·7	Kishnaghur	15·1
Puri	14·7							Patna	14·0
Arrah	14·3							Monghyr	13·6
Bhagulpore	13·6							Suburbs of Calcutta	13·2
Patna	13·3							Puri	12·6
Serampore	9·8							Howrah	11·8

It will be seen that cholera continued to prevail with added severity in the Chuprā Municipality in comparison with its incidence during the preceding week.

5. With regard to mortality referable to *Sex*, *Class* and *Age*, the rates stand as follows:—

<i>According to Sex.</i>			<i>According to Class.</i>			<i>According to Age.</i>		
		Ratio per mille.			Ratio per mille.			Ratio per mille.
Males	...	47·1	Christians	...	43·4	Under 1 year	...	475·0
Females	...	49·4	Hindus	...	49·8	1 and under 5 years	...	85·8
Ratio of male deaths to every 100 female deaths	...	108	Mahomedans	...	44·8	5 " 10 "	...	39·7
						10 " 15 "	...	25·3
						15 " 20 "	...	31·3
						20 " 30 "	...	27·0
						30 " 40 "	...	28·7
						40 " 50 "	...	32·4
						50 " 60 "	...	39·9
						60 years and upwards	...	72·4

A special census of the Europeans in the District Municipality was recently taken, as the census of this section of the community taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives of the district was 1,321,291, and the number of the Europeans was 90,342. The ratio between the two was 14 to 1. The ratio between the two was 14 to 1. The ratio between the two was 14 to 1.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 5th September 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
SUNDERMAN DIV.	1 Burdwan, Sept. 5 '85	4.70	Weather—seasonable. Prospects of crops good, except where there has been inundation. Price of rice 10½ to 14 seers per rupee. Health good.
	Culina ...	4.52	
	Cutwa ...	2.98	Weather—cloudy and rainy with a few intervals of sunshine. Incessant heavy rain all over the district. Some injury to paddy in low lands. A break or fine weather for some time is now required for all crops. Early paddy is being reaped in places with fair outturn. Health good.
	Raneegunge ...	2.58	
	2 Bankoora, " 5 "	2.69	Weather—very rainy. Prospects of the rice crop much improved by heavy rain. Transplanting well advanced. Prices have risen considerably. Cholera in virulent form still prevails.
	Bishenpur ...	5.62	
	3 Beerhoom, " 5 "	5.55	Weather—fairly seasonable. Floods are going down, but much damage has been caused in almost every part of the district. Fever begins to be prevalent.
	Rampore Haut ...	9.51	
PRESIDENCY DIV.	4 Midnapore, " 5 "	1.82	Rain has somewhat diminished; weather seasonable now. Prospects of <i>amun</i> crop at present unfavourable owing to high floods, particularly in Jehanabad sub-division. Fever prevalent.
	5 Hooghly, " 5 "	1.83	
	Serampore ...	2.32	Weather—cloudy and showery. Nearly three-fourths of the rice crop in the district is said to have been destroyed by the floods. The rest is in good order. Particulars cannot yet be got. Every effort is being made to drain off flood-water. Health good.
	Jehanabad ...	4.15	
	Howrah, " 5 "	2.44	Weather—seasonable. Standing <i>aus</i> crops suffering greatly from accumulation of rain water. Prospects of <i>amun</i> paddy on low lands very uncertain. Public health good.
	Oolooberiah ...	2.62	
	Central Districts.		
PRESIDENCY DIV.	6 24-Pergha, Sept. 5 '85	4.23	Weather—hot and cloudy with occasional rain. Harvesting of <i>aus</i> paddy continues. Paddy on low lands has been damaged in consequence of the height of the rivers, but on the whole the reports are not so bad as were expected.
	7 Nuddea, " 5 "	1.78	
	Kushtea ...	3.20	Moderate rain with cloudy sky. <i>Aus</i> paddy being harvested; outturn reported very good in Bagerhat. Transplanting of <i>amun</i> paddy continues. Coarse rice at Sakkhira Rs. 4-1 per maund. Public health fair.
	Meherpur ...	2.15	
	Chuadanga ...	3.93	Weather—cloudy and rainy. Prospects of <i>aus</i> crop, more than half of which has been reaped, continue good, though the rain has not yet ceased to injure it in some degree. <i>Amun</i> prospects continue favourable. Much fever everywhere.
	Ranaghat ...	4.55	
	8 Khoolna, " 5 "	3.88	Weather—seasonable. Prospects of the <i>amun</i> rice on <i>rakh</i> lands good; but the high floods have done great damage to the <i>aus</i> crop, most of which has been destroyed. <i>Amun</i> in Sudder has also suffered from the same cause. Common rice is selling at from 10 to 11½ seers per rupee. Public health fair, but fever prevalent in places.
RAJSHAHY DIV.	9 Jessore, " 5 "	3.81	
	Jhenida ...	3.66	Heavy rain throughout the district. Crops are doing excellently, though in places the harvesting of the <i>bhadoi</i> is slightly retarded by the incessant rain. Rice is selling at 16 seers per rupee on the average.
	Magora ...	1.45	
	Narail ...	0.95	Weather—showery. Cutting of <i>aus</i> paddy and jute continues. Prospects of standing crops generally fair, though in parts floods have done some damage. Fever prevalent.
	10 Moorshedabad, " 5 "	3.29	
	Lalbagh ...	2.54	Weather—hot, but the latter part of the week rainy. Harvesting of <i>aus</i> almost over. Transplanting of <i>amun</i> still going on; other crops doing well. Long continued want of rain is the general complaint in the Kurigram sub-division, where the transplanting of <i>amun</i> paddy is very backward. Fever and bowel-complaints very prevalent.
	Kandi ...	2.98	
RAJSHAHY DIV.	11 Dinagepore, Sept. 4 '85	8.26	Weather—showery and chilly after a lull of eight days. A shock of earthquake occurred at 6.45 A.M. on 3rd instant, and a severe shock this morning (5th) at about 11.30 A.M. Prospects of crops continue favourable. <i>Aus</i> is being reaped. Public health fair.
	12 Rajshahye, " 5 "	2.07	
	Nattore ...	3.05	Weather—cloudy and rainy. Prospects of <i>amun</i> and jute very good. Rivers still rising. A shock of earthquake on the 5th at 11.43 A.M.
	Nowgong ...	1.82	
	13 Rangpore, " 5 "	6.56	Weather—again wet. The harvest in progress is satisfactory as are all prospects.
	Kurigram ...	0.16	
	Gaibanda ...	1.83	Weather—cool and cloudy, frequent rain; very heavy rain in Roda. <i>Bhadoi</i> paddy has been cut, and is a full crop. <i>Haimanti</i> paddy is still being transplanted and is doing well. Price of rice has fallen to 20 seers per rupee in many places. Public health fair.
	Nilphamari ...	5.82	
RAJSHAHY DIV.	14 Hogra, " 5 "	1.13	Weather—cloudy and rainy. Prospects of <i>amun</i> and jute very good. Rivers still rising. A shock of earthquake on the 5th at 11.43 A.M.
	15 Pubna, " 5 "	7.60	
	Serajunge ...	2.86	Weather—again wet. The harvest in progress is satisfactory as are all prospects.
RAJSHAHY DIV.	16 Darjeeling, " 5 "	8.13	
	17 Julpigoree, " "	4.43	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>conold</i>			
Dacca Division.	<i>Eastern Districts.</i>		
	18 Dacca, Sept. 5 '85	Weather—cloudy. Harvesting of <i>aus</i> paddy nearly completed, and that of jute going on. Outturn good. <i>Shail</i> and <i>roachia</i> paddy being sown. Prospects of crops and public health generally good.
	Manickgunge	0.34	
	Munshigunge	1.43	
	Naraingunge	2.49	
	19 Furrædpore, " 5 "	3.01	Incessant rain with a good deal of wind. Rice crop good. Jute being steeped. Health fair.
	Goalundo	1.40	
	Madaripore	0.25	
	20 Backergunge, " 3 "	2.16	Weather—seasonable. Transplanting of <i>amun</i> crop is nearly over. Continual rain has caused slight damage to the harvested <i>aus</i> paddy. Public health generally good.
	21 Mymensingh, " 4 "	2.26	Weather—cool. Strong gusts of wind with sharp showers. A shock of earthquake on the morning of 3rd instant. <i>Aus</i> rice being reaped, and jute cut and steeped. Transplanting of <i>amun</i> rice continues. Prospects good.
CHITTAGONG DIV.	Jamalpur	0.67	
	Kishoregunge	0.48	
	Attia	0.55	
	Notrokona	1.89	
	22 Chittagong, Sep. 8 '85	11.60	Heavy rain throughout the week. Prospects generally fair. Outturn of <i>aus</i> eight annas. Transplanting of <i>amun</i> still continues. Prices steady. Cholera and cattle-disease continue.
	23 Noakholly, " 4 "	6.49	Heavy showers on 29th and 30th ultimo have caused some damage to <i>amun</i> seedlings. Weather since generally clear. <i>Aus</i> crop has been mostly gathered; outturn very good, but part of it will be lost if rainy weather continues. Public health good.
	Fenny	2.49	
	24 Tipperah " 3 "	5.19	Weather—stormy with heavy rain and brief intervals of sunshine. Weather all that can be desired for late rice, which has now been transplanted and looks remarkably well. Health of the people generally good, the heavy rainfall having been decidedly beneficial.
	Chundpore	4.70	
	25 Chittagong Hill " 1 "	1.96	Weather—cloudy throughout the week; excessive heat at noon. Paddy crops in <i>joom</i> and plains greatly improved by rain, and their prospects reported good. Steeping of early <i>joom</i> paddy crops commenced in many places. Prospects of sugarcane and cotton good. Fever still continues.
BEHAR.	Tracts.		Weather—rainy. <i>Amun</i> paddy still being transplanted. <i>Joom</i> crops being reaped. Sugarcane doing well. Public health good.
	Hill Tipperah, " 2 "	1.58	
	26 Patna, Sept. 5 '85	1.20	Weather—cloudy and showery. <i>Bhadoi</i> crops in low and denaral lands greatly damaged by the recent high flood. Prospects of paddy crop good. Transplanting of rice seedlings in progress. Cholera less prevalent.
	27 Gya, " 5 "	4.20	Weather—cloudy. <i>Bhadoi</i> being harvested. Transplanting of paddy still going on in Nawada sub-division. Cholera and fever still reported from some places. Prices almost stationary, but rather lower.
	28 Shahabad, " 5 "	5.13	Weather—rainy and cloudy. Harvesting of <i>bhadoi</i> crops in progress. Continuous rain has done some injury to <i>bhadoi</i> , and a break would benefit the <i>aghani</i> crop. Fever and cattle-disease reported from Sasseram. Cholera abating.
	Buxar	3.97	
	Sasseram	3.81	
	Bhabhua	2.58	
	29 Durbhanga, " 5 "	6.20	Weather—cloudy and rainy. Sufficient rain this week to admit of transplanting operations being brought to a close. A break in the weather is now necessary to enable the cultivators to cut their <i>bhadoi</i> crops which have already ripened. Prices almost stationary. Public health generally good.
	Tajpur	11.57	
PATNA DIV.	Madhubani	3.25	Weather—continues very cloudy and rainy, almost without intermission. Rainfall in Sitamurhee exceptionally heavy. Crop prospects generally good; but considerable damage caused by rain and flood in low lands. Harvesting of early millets continues. Cholera less in Sudder and Hajipur sub-divisions; but severe in Sitamurhee sub-division, from which 510 deaths during the week reported.
	30 Mozufferpore, " 5 "	4.14	Weather—cloudy with several heavy showers. Heavy rain everywhere, and a break is now required as the <i>bhadoi</i> crops have been somewhat injured in places owing to excessive rain. Prospects of paddy continue good. Cholera abating.
	Hajipur	1.98	
	Sitamarhi	14.85	
	31 Sarun, " 5 "	3.63	Weather—rainy. Sunshine is needed. Prospects of crops continue good. Transplanting of <i>aghani</i> rice is being vigorously carried on. Prices have fallen slightly. Cholera has abated in Motihari, but still prevails in Bettiah and in the interior.
	Sewn	2.68	
	Gopalgunge	2.64	
	32 Chumpanu " 5 "	9.06	Heavy and continuous rain for the last three or four days. The continued rain has caused some damage to the <i>bhadoi</i> on high lands. Much has suffered from the inundation of the Ganges. Prospects of the <i>aghani</i> are good. Cholera abated. Prices steady.
	33 Monghyr, Sept. 5 '85	8.76	Weather—wet. Prospects of rice crop in north much improved by rain. Prices in that part of the district have fallen, and <i>murwa</i> is selling at 60 seers per rupee. In south heavy rain and floods continue to do harm to <i>bhadoi</i> . Cholera still bad in Banksa.
	Beguserai	1.08	
BHAUPUR DIV.	Janui	1.97	Weather—wet. <i>Bhadoi</i> good. Rain almost too late for <i>aghani</i> transplanting. Health fair. Ganges still very high.
	34 Bhagulpore, " 5 "	6.87	Weather—cloudy and rainy; continued rainfall doing harm to the standing crops and retarding progress of transplanting of winter rice in Gazole. Rivers still rising. Coarse rice is selling at 12 seers per rupee at Englishbazar.
	Banksa	2.41	
	Soopole	3.92	
	Muddehpoorah	4.61	
	35 Purneah " 5 "	6.31	Rain day and night, with short breaks now and then. Heavy and continuous rain has damaged Indian-corn almost everywhere. Low-lying paddy lands have also suffered, but high land paddy doing very well. A large area of paddy destroyed by floods in Rajmehal. Cholera still very bad in Deoghur and Pakour.
	Kissengunge	2.81	
	Arrareah	5.98	
	36 Maidah " 5 "	8.59	
	Chanchal	5.19	
BHAUPUR DIV.	Gazole	5.67	
	Shibgunge	5.55	
	37 Nonthal Pergah, " 5 "	7.65	
	Deoghur	7.77	
	Godda	1.30	
	Rajmehal	7.39	
	Jamtara	3.82	
	Pakour	9.46	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
Orissa Divn.	38 Cuttack, Sept. 4 '85	0.57	Weather—cloudy. A heavy shower on the 3rd. More rain wanted for the crops. Rainfall 19 inches in short. <i>Beali</i> being reaped with fair outturn. <i>Sarad</i> being transplanted and weeded. Price of rice very high. Common rice 10 to 11 Cuttack seers per rupee in the town. Public health generally good.
	39 Pooree, " 3 "	1.11	Weather—hot with occasional showers. Puddling, transplanting, and weeding of <i>sarad</i> paddy going on, but puddling work is retarded for want of sufficient rain in the Chilka tracts. <i>Beali</i> or early rice is ripening. Miscellaneous crops doing well. Common rice is selling at an average of 17 seers 15 chittacks per rupee in the Sudder sub-division, and 17 seers 8 chittacks in the Khoorda sub-division. Cases of cholera are still reported from the interior of the district.
	Khoorda " ...	1.58	
	40 Balasore " 4 "	3.14	Weather—cloudy with occasional showers. <i>Beali</i> ripening, and in some places being cut. Weeding and transplanting of <i>sarad</i> crop going on well. Crops promise remarkably well. Public health generally good.
CHOTA NAGPORE.			
<i>South-West Frontier Agency.</i>			
	41 Hazaribagh, Sept. 4 '85	3.76	Weather—seasonable. Abundant rain everywhere. A break now is much needed. Extensive injury to <i>bhadoi</i> from excessive rain reported from several thanas. Transplanting completed, and rice crops everywhere promise well. Cholera still very prevalent in several thanas, and cases of small-pox, fever, and cattle-disease also reported from several villages.
	42 Lohardugga, " 5 "	2.58	Weather—wet and squally. Short breaks during the early part of the week, which did good, but it is now again as wet and windy as it could be. Slight damage may have been done by excessive rain to <i>murwa</i> and <i>makai</i> , but on the whole crop prospects very fair. Prices show a tendency to fall. Cholera and fever still very prevalent.
	43 Singhbhum, " 4 "	3.11	Weather—still very wet. The continued wet weather has done some little damage to <i>til</i> and <i>gundli</i> , but other crops are reported to be doing well. Prices easy. Fever and cattle-disease reported from Seraikela and Kalkapore stations.
	44 Manbhum, " 5 "	3.56	Weather—wet and stormy. Prospects of all crops good, but rather too much rain has fallen lately and some fine weather required. Public health good. Prices falling.
	Govindpore " ...	1.31

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, the 7th September 1885.

**SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS
TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 4TH
OF SEPTEMBER 1885.**

The week has again been one of rather heavy rainfall in almost all districts, and except in East Bengal, all districts have received falls very decidedly in excess of the normal, though the excess during this week has not been so large as during the previous week. Behar is the district which has received the largest excess falls, and next in order stand North Bengal, Chutia Nagpore and South-West Bengal, Orissa and, as before stated, East Bengal has received a fall somewhat below the normal.

On the last day of the previous week a small barometric depression, which had formed on the 26th and 27th of August, was over South Bengal, the centre being apparently not far to the south-east of Calcutta. On the first day of the present week, that is on the 29th of August, pressure generally increased over the Province by small amounts, while the area of low pressure in South Bengal scarcely altered its position, nor did it appear to increase in intensity to any material extent. On this day rainfall was general over South-West Bengal, and over a large part of East Bengal and Orissa, but in other districts rainfall was light and local. The depression, however, then commenced to move in a northerly direction, pressure falling rapidly in its advance, and on Sunday, the 30th instant, the centre of the small storm was to the north of Krishnagore. It continued its advance in a north-westerly direction, and on the 31st it was over the central parts of South Behar, the centre being apparently between Gya and Bhagulpore. The small storm was accompanied by the usual cyclonic circulation of winds, and it was sufficiently influential to affect the wind system of the whole Province, and with its northward advance rather strong southerly monsoon winds were brought up, which gave moderate to heavy rain to all districts. A tendency to cyclonic circulation of winds having thus been set up round the central parts of the Province, this has continued to exist throughout the remainder of the week, though the depression itself became very shallow and almost disappeared, but only to revive on the Friday, when there was again a tendency for the depression to become more marked. At the same time, on the 2nd, there was rather a rapid fall of pressure at the stations in South-West and East Bengal and Orissa, and this having continued on the 3rd, a distinct area of low pressure was formed in South Bengal, the lowest pressure being reported from Burrisal. The falling pressure continued on the 4th, and the depression in South Bengal deepened; while at the same time pressure became distinctly low over the eastern parts of South Behar and the southern parts of North Bengal, and thus on this day the weather conditions of the Province were affected by two distinct barometric depressions, and were therefore decidedly disturbed. With the persistence of the depression over Behar and parts of North Bengal, and with the formation and passage of the depression through South and Central Bengal, it will be readily understood that rainfall has been abundant, particularly during the second half of the week in the central and northern districts, and especially in Behar and North Bengal and Chutia Nagpur; while in East Bengal on the other hand, though receiving fairly general rain, the showers have not been so heavy, and thus the rainfall has been in comparative defect in this district.

The average pressure for the previous week was nearly 0.08" in defect, but with the tendency to the reproduction of the areas of low pressure in South Bengal, which has been so persistent a feature in the meteorology of the past few weeks, the pressure in South Bengal was about 0.12" in defect. The tendency of the changes during the present week has been to decrease this defect by small amounts, and thus, while the average defect over the whole Province has been equal to 0.053", in South and Central Bengal the defect was about 0.07". The pressure changes from day to day have been mainly dependent on the formation and movements of the two depressions above discussed. Thus on the 29th pressure in South-West Bengal was in defect by about 0.07", while Behar, Chutia Nagpur and Orissa showed pressures slightly above the normal. On the following day, with the northward advance of the depression, pressure became low at Jessore and other stations to the north of it, and the defect increased to about 0.12" below the normal, Orissa and Behar still showing pressures above the normal. On the 31st, when the depression had reached Behar, pressure at Gya was 0.08" below the normal, while the average defect over the whole Province was not much more than half this. With the commencement of the formation of the second depression, the largest defect from the normal again appeared at the southern stations, and on the 3rd the defect at Chittagong was 0.12", and on the 4th, at the south-eastern stations generally, the defect was 0.14". It was noticeable that at the close of the week a distinct but rather broad band of low pressure stretched from the southern stations in East Bengal in a north-westerly direction to the north of the Province, the southern and northern stations of the low pressure band being Burrisal and Purneah.

With the continued heavy rainfall during the week, temperature has been low again at most stations; the average temperature of the whole Province has been about 1° below the normal, and it is naturally those districts in which the rainfall has been heaviest where the temperature has been lowest. Thus in Orissa and East Bengal, where rainfall has been comparatively light, temperature has been practically normal, but in Behar, where rainfall has been heavy, temperature averages about 2° below the normal. On some days of the week, particularly towards its close, when rainfall was heavy and continuous in this district, the defects from the normal were very considerable, and on the 3rd temperature in Behar was about 4° below the normal, and on the 4th the defect at Gya was no less than 7°, while at Hazaribagh it was nearly 5°.

Rainfall, as has before been stated, has been heaviest in the central and northern districts. Thus taking up the meteorological districts, South Behar has received an average fall of 4.43 inches, the normal fall for the same period being 2.01 inches, it has therefore received a fall 120 per cent. in excess of the normal. North Behar reports an average fall for the week of 5.27 inches as compared with 2.82 inches, which is the normal amount for the week, and the actual has therefore been 83 per cent. in excess of the normal. In North Bengal the average fall has been no less than 5.22 inches against the normal fall of 3.69 inches, and the excess fall has therefore equalled 42 per cent. In South-West Bengal the average fall for the week has been 3.85 inches against the normal of 2.40 inches, and it has thus received an excess fall of 40 per cent., and Orissa reports an average rainfall of 2.60 inches against the normal amount of 2.15 inches, and thus the actual has been in excess of the normal by 22 per cent. Chutia Nagpur has received an average fall of 3.20 inches against the normal 2.24 inches, and is thus 43 per cent. in excess. The only division which has been in defect was East Bengal, which has received 3.65 inches instead of the normal for the week of 3.67 inches, and the defect is therefore 1 per cent. of the normal. The number of rainy days during the week has also been in excess of the normal even in the district where the fall has been deficient, and for the whole Province the average number of rainy days during the week has been 4.9 against the normal number of 3.9 days.

As has before been stated, the division in which the heaviest comparative rainfall has occurred has been Behar, but the percentage of excess above stated does not fully represent the excess in some of the smaller districts, where in some cases the falls have been considerably more than three times the normal. Thus the district of Mozufferpore received an average of 7.47 inches of rain against the normal amount of 2.25 inches, the district of Durbhanga also received 7.86 inches of rain against the normal of 2.75 inches, the Shahabad district received 4.19 inches against the normal 1.88 inches, and the Sonthal Pergunnahs district received 5.41 inches against the normal 2.27 inches. At isolated stations again very heavy rain in some cases has been received: thus in South-West Bengal Devog in the Midnapore district reported 8.96 inches of rain in the week, and Rampore Hât in the Beerbhoom district 8.08 inches. In North Bengal Pubna reported 7.60 inches, Panchbibi (Bogra district) 6.87 inches, Chanchul (Maldah district) 6.44 inches, Dinagepore 9.83 inches, Rungpore 6.48 inches, and Bagdogra (Rungpore district) 9.69 inches. In Cooch Behar district Mickligunge reported 13.81 inches, Mataihanga 10.05 inches, Cooch Behar 9.54 inches and Dinhatia 8.22 inches, and in the Darjeeling district Buxa 10.09 inches and Darjeeling 8.13 inches. In North Behar Purneah reported 6.31 inches, Motiari (Purneah district) 14.04 inches, Tajpur (Durbhanga district) 12.22 inches, Bahera (Durbhanga district) 12.23 inches, Durbhanga 6.20 inches, Sitamarhi (Mozufferpore district) 15.44 inches and Motihari 9.06 inches. In South Behar Monghyr reported 8.76 inches, Gogri (Monghyr district) 8.95 inches, Bhagulpore 6.23 inches, Rajmahal 7.17 inches, and Pakour (Sonthal Pergunnahs) 8.21 inches.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 4th of September 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.								RAINFALL.							
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of August.		Since 1st May 1886.

N. 26, NE. 83, E. 77, SE. 102, S. 162, SW. 169, W. 127, NW. 25, Calm 23.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of former years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore .003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 0.6 higher; and, finally, the thermometer, which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards, is found to read 0.6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

Results of the Meteorological Observations taken at the Alipore Observatory from 30th August to 5th September 1885.

The mean pressure of the seven days ... 29.599
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29.644

The total number of hours of bright sunshine ... 25.5
The maximum possible number of hours of sunshine ... 87.7

The mean temperature of the seven days ... 82.2
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83.7
The extreme variation of temperature ... 11.2
The maximum temperature ... 88.4

The highest velocity of the wind in one hour ... 16 Miles.

The highest pressure of wind on one square foot ... 2 lbs.

The mean relative humidity ... 88
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 85

The total fall of rain from 30th August to 5th September 1885 ... 4.05
The average fall of the corresponding period for 24 years, S. G.'s Office ... 2.25
The total fall from 1st January to 5th September 1885 ... 56.50
The average fall of the corresponding period for 24 years, S. G.'s Office ... 50.11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, p passing temporary showers, d drizzling rain, t thunder.

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA ;
Calcutta, the 7th September 1885.

ALEXANDER PEDLER,
For Meteorological Reporter to the Govt. of India.

MEMORANDA.

DURING the week ending 22nd August 1885, births and deaths were reported to have been registered in the principal Municipalities in Bengal at the rates, respectively, of 27·1 and 46·4 per 1,000 of population against 27·25 and 48·1 per 1,000, respectively, during the preceding week ending 15th August.

2. The following towns returned the highest proportions of births and deaths :—

Births.				Deaths.			
			Ratio per mille.				Ratio per mille.
Durbhanga	48·0	Chupra	139·6
Patna	47·7	Gya	90·9
Bhagulpore	47·1	Bhagulpore	79·6
Gya	44·4	Patna	66·5
Chittagong	42·2	Monghyr	65·1
Arrah	34·7	Arrah	57·4
Mozufferpore	34·1	Puri	54·6
Burdwan	32·0	Burdwan	50·4
				Purneah	41·5
				Mozufferpore	40·1
				Chittagong	39·9
				Serampore	39·3
				Suburbs of Calcutta	37·4

3. The principal diseases, specified in the table appended to this Memoranda, furnished the death-rates indicated below :—

				Ratio per mille during the weeks ending—		
				22nd August 1885.	15th August 1885.	
Cholera	10·1	13·4	
Small-pox	·4	·8	
Fever	16·1	14·1	
Bowel-complaints	8·0	7·6	
Injury	·7	·4	
Other causes	11·0	11·8	

The above figures denote that, in comparison with the preceding week, the severity of cholera had, on the whole, declined considerably, and that of fever had increased noticeably.

4. Referring to the death-causes above indicated, while injury was not noticeably severe anywhere, and small-pox proved conspicuously fatal only in the Durbhanga town, viz. at the rate of 5·5 per 1,000 of its population, the rest of them caused the highest mortality in the following Municipalities :—

Cholera.		Fever.		Bowel-complaints.		Other causes.	
	Ratio per mille.		Ratio per mille.		Ratio per mille.		Ratio per mille.
Chupra	95·7	Bhagulpore	37·1	Patna	17·2	Puri	33·6

Total	7,089'63	3,780'49	7,583'06	5,820'53	13,470'12	13,403'59

GENERAL REMARKS AND EXPLANATIONS.

The total weight lifted during the month under review stands at 13,403'59 tons against 13,470'12 tons for the corresponding month last year. The decrease of 66'53 tons in the month's working is mainly due to a falling off in food-grain and railway materials.

INCREASES.

Ginger ... Tons 63'08
 Due to a good crop and fair demand for export.
 Jute ... Tons 106'45
 Despatches of new crop commenced. Increase due to rise in market.
 Miscellaneous ... Tons 625'95
 The traffic under this head comprises so many different commodities, all subject to trade fluctuations, that it is difficult to give any definite explanation of an increase or decrease.
 Piece-goods ... Tons 234'97
 Large despatches of piece-goods have been sent forward to meet the expected increased demands during the approaching Durga Poojah.
 Salt ... Tons 460'10
 The decrease in this traffic during the last two months accounts for this increase.
 Tea ... Tons 87'43
 There has been an increasing demand for all sorts, and the prices offered more favourable.
 Tobacco ... Tons 682'05
 There has been an increased demand of this article for export to Burma.

DECREASES.

Ale ... Tons 11'12
 The fluctuations of this traffic are difficult to follow, depending as they do on the demand by soldiers at Darjeeling. The falling off probably will be met by a corresponding increase later on.
 Food-grain ... Tons 1,114'71
 The traffic chiefly consists of rice and paddy, and the decrease is due to the partial failure of crops throughout the districts served by this railway.
 Gunny-bags ... Tons 69'51
 The Calcutta market is dull, and the decrease is consequent on rice exports falling off.
 Railway material ... Tons 962'02
 This is due to less coal being carried for the Locomotive Department, and no stores and machinery coming forward for the Assam-Bihar Railway.
 Sugar ... Tons 6'36
 There has been a steady increase in this traffic during the year owing to cheap prices, and this solitary instance of decrease is apparently due to the markets being well stocked.
 Seed ... Tons 165'84
 The Calcutta market for all descriptions of seeds is dull.

C. J. KEENE, Traffic Superintendent.

TRAFFIC SUPERINTENDENT'S OFFICE, Saidpur, the 22nd August 1885.

Weekly Return of Traffic Receipts on Indian Railways.

ADMINISTRATION OF THE STATE OF HILL TIPPERAH.

POLITICAL.

Dated Darjeeling, the 8th September 1885.

RESOLUTION.

READ—

The Administration Report of the Political Agency of Hill Tipperah for the year 1884-85.

Read also—

The Report for 1883-84 and the Resolution recorded thereon.

The Assistant Political Agent has submitted a full and intelligent report on the general administration of the State of Hill Tipperah through the Political Agent and the Commissioner of the Division, who have each made their own remarks upon it. So far as the condition of the people is concerned, the past year was prosperous. The public health was good, crops were plentiful, and prices high. The outturn of the cotton crop, one of the principal products of the country, was above the average; but as nearly a third of it was left in the hands of the growers, the crop was not as remunerative as it might have been. The reason of this is stated to be the expansion of the jute trade, which is now exclusively carried on in the adjoining districts into which formerly cotton used to be largely imported. As pointed out by the local authorities, this displacement of cotton seems to point to the necessity of a

reduction in the high export duty—Rs. 2 per maund—levied in the Maharaja's territories. This has been suggested to the Durbar, and is now under consideration. The rainfall was decidedly short, being nearly 10 inches less than that of 1883-84, and more than 13 inches below that of 1882-83. As, however, the rainfall is only registered at the agency at Agurtolla, its general sufficiency can only be judged by the quality of the crops and the health of the people. The former, as has been above observed, were good, while the latter, with the exception of an outbreak of cholera at Agurtolla in October, which caused a few deaths, is stated to have been satisfactory throughout the year. The material condition of the people is also said to be improving, though the inhabitants of the plains are decidedly better off than the hill people. The latter, however, might easily, with their fertile and extensive lands, become more prosperous than they are; but their indolence and want of thrift is at present an effectual bar to any rapid advance in this direction. In the Resolution on the Administration Report for the year 1883-84, the Lieutenant-Governor expressed some surprise that immigration into Hill Tipperah was not, even in the absence of any direct encouragement from the State, greater than it is. It now appears that the colony of Mughls, who, as noticed in previous reports, have established themselves in Hill Tipperah, and are now living contentedly in their new settlements, have, during the past year, been followed by a considerable number of their own class and by some Chukmas—in all some 300 families—from the Chittagong Hill Tracts. Owing to its present financial difficulties, the State can do little to encourage immigration, beyond conferring upon settlers the right of holding their lands rent-free for a certain number of years. If more substantial assistance could be given, it is stated that large settlements might be established in various parts of the State where there are tracts of fertile land now lying waste for want of people to cultivate them. From the neighbouring districts, except the Chittagong Hill Tracts, immigration cannot be expected, as the people are too well off to care to leave their own homes; but settlers, in considerable numbers, might be obtained from the less prosperous districts of Bengal and Behar, if some little money could be advanced to help them over the first year or two after their arrival. It is much to be regretted that in the present financial condition of the State any scheme of this kind is absolutely impracticable.

2. The trade of the State is gradually, if not rapidly, developing. During the past year the total value of the export trade is estimated at Rs. 6,26,000 against Rs. 5,83,000 in the previous year, and this notwithstanding that the transactions, both in elephants and cotton, were smaller than usual. In cotton about 1,000 maunds less than during the previous year were exported, while, although 114 elephants were put up to auction, only a few found purchasers.

3. The caste movement, of which frequent mention has been made in previous reports, appears to be dying a natural death. The Maharaja is beginning to see that it cannot in the end succeed, and that all the influential people of the State are opposed to it. Still the movement has not been entirely given up, for, without compromising himself, the Maharaja is unable altogether to recede from the point to which he had advanced. The Lieutenant-Governor regrets to observe that, notwithstanding what was said last year about the unnecessary multiplication of offices as representing a serious drain on the resources of the State, the Durbar have thought it necessary to revive the office of Minister-Associate, which was abolished in 1882-83. The duties attaching to this office were chiefly in connection with the correspondence between the State and the Agency. Since its abolition those duties have devolved upon the Dewan, and this arrangement has, it is stated, answered all practical purposes. During the year under report, Baboo Shumbhu Chundra Mookerjee, the former Minister-Associate, has been re-appointed and placed in charge of the Military, Education, Judicial and Political Departments. Such an appointment, under existing circumstances, seems altogether superfluous; the more so, as the Baboo, instead of, as formerly, residing in Agurtolla, where he might have been of some use, has been permitted to live in Calcutta, where, it is plain, he can take no personal share in the management of the departments of which he has been put in charge, but must confine himself to advising on such points as are placed

before him for opinion. The Lieutenant-Governor must express the opinion that such an appointment can, from its very nature, be of little, if any, use, and that, in the present financial condition of the State, it is one that certainly ought not to have been made.

4. The Revenue administration of the State continues in its former unsatisfactory condition. The expenses are said to exceed the receipts by more than a lakh of rupees. The commencement of these financial difficulties was no doubt the heavy and protracted litigation with Kumar Navadwip Chundra Deb, which commenced 11 years ago, and was only finally terminated in 1883. Other circumstances have, however, combined to increase the debts which were then incurred. Of these, the principal have been the caste movement above referred to; *secondly*, the Maharaja's journey to Pindrabun in 1882-83; and *thirdly*, the marriage of two of the Maharaja's children during the past year. The debts of the State are now believed to be over 11 lakhs of rupees. On about half of this sum no interest is paid, as it represents arrears of salaries and allowances due to officers of the State, pensioners, and others, and amounts due to shop-keepers for supplies to the Maharaja and his family. On the remaining half interest, amounting in the aggregate to more than Rs. 80,000, has to be paid. The revenue from all sources during the past year stood at Rs. 2,38,724 against Rs. 2,33,831 in the previous year. There was an increase of Rs. 15,141 under 9 heads, and a decrease of Rs. 10,248 under 10 heads, leaving a total net increase of Rs. 4,893 as compared with the revenue of 1883-84. The only noticeable increases were Rs. 8,05 under the head of tax on forest produce, Rs. 3,191 on the tax on forest produce floated down the Fenny, and Rs. 1,557 from land revenue from the plain lands. On the other hand, the tax on cotton and oil-seeds fell off by Rs. 6,701; while the royalty on elephants caught was less by Rs. 1,416 than during the previous year.

5. There has been no improvement in the management of the Maharaja's estates in British territory, but during the year under review Mr. Sandys has been appointed manager in succession to Mr. Larminie. As remarked by the Commissioner, the figures given regarding the collections from these fine properties are very confusing. The Assistant Political Agent puts them down (*vide* paragraph 49 of his report) at Rs. 5,50,000; the Political Agent in Part III of his letter to the Maharajah appended to the report estimates them at Rs. 4,50,000. The former states the net profits to be Rs. 2,20,000; while the latter mentions Rs. 1,70,500 as the probable amount. But whichever set of figures is correct, it seems certain that, with proper management, a very much larger return should be obtained. At present the condition of these estates is generally unsatisfactory. It was stated last year that some of the Maharaja's creditors held farms in them, the value of which more than covered the interest due on their debts. This year it has been reported that the Maharaja has commenced to give putnis, thus debarring his successors from the possibility of sharing in any increase in the value of the property which may take place in the future. This appears to be a most ruinous step. As the Commissioner remarks: "If it were possible that he (the Maharaja) should obtain fair prices for the putnis now being given, there might be some reason for their grant, but I unhesitatingly assert that fair prices cannot be got for putnis in an estate managed as that of the Maharaja has been for years. Rents are badly collected and in arrear. There has been no proper settlement with the ryots, and under such circumstances good prices cannot be got."

6. In the reports now submitted, the Commissioner and Magistrate have made certain suggestions as to the measures which are, in their opinion, necessary to prevent the ruin which is impending over the Maharaja.

In the present review of the administration of Hill Tipperah for the past year, the Lieutenant-Governor will refrain from expressing any opinion on the proposals submitted by these officers; but having regard to the peculiar position occupied by the Maharaja as Zemindar and Chief of Hill Tipperah, it is impossible for the Government of Bengal to view with indifference the state of affairs brought under its notice. Unless the Maharaja, the personal amiability of whose character is borne testimony to by the Commissioner, is prepared himself to undertake the necessary reforms in his affairs, some more direct interference on the part of Government can hardly be avoided.

The recent appointment of Mr. Sandys as Manager of the zemindari property may, the Lieutenant-Governor trusts, be taken as showing that the Maharaja is convinced of the necessity of some improvement in the management of his estates in British territory; but the Lieutenant-Governor would point out that, if any lasting good is to result from this appointment, it is essential that full authority should be given to the Manager to deal with and correct abuses. It is in this direction that the previous arrangements of a similar kind have broken down, and unless the Maharaja is prepared to give his full confidence and a full measure of support to his Manager, there can, the Lieutenant-Governor fears, be but little hope of any satisfactory improvement.

The Lieutenant-Governor must express a strong hope that such measures of reform as the Maharaja may decide on adopting will not be confined to the Tipperah estates. The Maharaja should have strongly pressed upon him the urgent necessity of abolishing expensive and useless appointments, of which one has been referred to in an earlier part of this Resolution, of reducing, wherever possible, the existing subordinate establishments and the removal of obstructive rules, such as the one alluded in paragraph 47 of the Assistant Political Agent's report, under which British subjects residing in Hill Tipperah are unable to acquire any right of occupancy in respect of lands held by them there. It is said that this rule has been found to be productive of much mischief, but that its rescission has been promised. The Lieutenant-Governor is glad to notice that during the year the Maharaja has consented to bring a portion of the forest mehal under khas management, with the prospect of increasing the revenue derived therefrom by at least Rs. 25,000 a year. This is, at all events, one step in the right direction, and the Lieutenant-Governor hopes to see that during the current year still further changes in this respect have been introduced.

7. It is very unsatisfactory to find that, as before, only a statement of receipts has been furnished by the Maharaja's office. The advantages of an expenditure statement being also prepared has been so frequently explained, and the necessity for it is so obvious, that the Lieutenant-Governor cannot understand the Maharaja's disinclination to supply it, except on the supposition that, as remarked last year, it is not to the interest of his officers that the financial position should be too closely scrutinized.

8. There appears to have been no change in the arrangements for the administration of justice during the past year, with the exception that a son-in-law of the Maharaja has been appointed Assistant Magistrate with limited magisterial powers over a portion of thana Agurtolla. The appointment is fortunately an honorary one, and appears to have been created, not so much because it was wanted, as to give the holder of it some little judicial training.

9. Crime generally is light, especially in the hills. Minor offences against person and property, hurt, petty thefts, and mischief constitute nearly the whole of it. Cognizable crime seems steadily decreasing, the number of cases during the last three years being 172, 156, and 139 respectively. The total number of criminal cases of all kinds was 625 as against 567 in the preceding year. Of these, 218 were rejected, 22 were pending at the close of the year, and 385 were tried, with the result that 365, or 53·4 of the total number tried, were convicted, and 292, or 42·7, were acquitted. Serious cases numbered 54, or 8·6 per cent., including 3 murders, 2 culpable homicides, 4 cases of rape, 3 cases of dacoity, and 2 of robbery, or very nearly the same as in 1883-84, the only differences being that in the year under report there were 2 more cases of rape and 2 less cases of robbery than in the previous year. The number of cases in which British subjects were concerned was 180 against 153 in the previous year and 182 in 1882-83. In 39 British subjects were complainants, and in 47 both complainants and defendants. One hundred and eighty persons in all were brought to trial; 90 were convicted, 87 discharged, 1 died and 2 remained under trial.

10. The number of appeals instituted during the year was 52 against 64 in the previous year. In 25 cases the orders of the lower courts were upheld, in 14 cases modified, and in 13 cases reversed. One case was pending at the close of the year. The work in the Khas Appellate Court, presided over by the Jubraj assisted by two Thakurs, was light. Altogether there were only 11 cases before

and in three reversed. So far as they go, these results speak for themselves but as the Thakur Judges are, though well meaning, without much training; or experience, it is a question whether they are any more likely to arrive at the truth in any particular case than the court which originally tried it.

11. The number of civil suits was 216 against 254 of the previous year, the decrease being chiefly in bond suits, owing partly to the people not being naturally litigious, and partly to their generally prosperous condition. Including 71 pending at the close of 1883-84, there were altogether 287 for disposal during the year under review. Of these, 249 were decided, leaving 38 pending. The aggregate value of the new institutions was Rs. 16,479-6-10, or an average of Rs. 76-5 per suit. Only nine cases were valued above Rs. 500. The total amount of fees realized was Rs. 2,797, or Rs. 12-15 per suit. There were 46 civil appeals, 31 before the Lower Appellate Court and 15 before the Khas Appellate Court. Of the former, 29 were disposed of, in ten the orders appealed against were confirmed, in 16 either reversed or modified, two cases were remanded and one was rejected. In the Khas Appellate Court all the cases were disposed of, nine being confirmed, three reversed, two remanded and one rejected. There were 59 suits in which British subjects were concerned against 122 in the previous year. In 59 cases the plaintiffs were British subjects, in 14 they were defendants and in 16 both plaintiffs and defendants. The falling off in the number of these cases is said to be due to the fact that the decrees of the courts of the State cannot be executed in British territory.

12. There are four jails in the State—one at Agurtolla itself, and one at each of the sub-divisions of Sonamura, Koylashur, and Belania. The average daily number of prisoners was only 57. It is stated that the prisoners are always treated with leniency, the work is light, food ample, medical attendance sufficient, as is evidenced by the fact that only one prisoner out of 34 under treatment during the year died.

13. The Military force consisted of 295 men of all ranks, of whom 17 are Bengali Hindus, 122 Bengali Mussalmans, 57 Goorkhas, 10 Assamese, 57 Hindustanis, 19 Tipperahs and 13 Christians. There were no frontier disturbances during the year. The five guard posts maintained were the same as before, viz., Dharmanagar, Chirakuti and Kamalpur in the Koylashur sub-division, one at Belania and one at Udaypore. During the raiding season an additional post is kept up at Eksari. Cultivation having of late extended all around them, the position of the two first-named posts is not so good as it was, and should be moved further forward. The Commissioner doubts the necessity of maintaining the Kamalpur outpost, and thinks that one well-placed guard might do the work now done by the three northern guards; this would lessen expenditure and enable a reduced number of men to be kept up in a more efficient state. As it is, the service is not attractive. The men, like the other establishments of the State, are paid irregularly, and are neither well disciplined nor properly equipped.

14. Nothing appears to have been done during the past year to improve the communications of the State. The road leading from Agurtolla to Tipperah was repaired, but no steps were taken towards establishing any system of communications in the interior, owing no doubt to the impossibility of providing the necessary funds.

15. The state of education is not satisfactory. The number of boys' schools has increased by one during the past year, and there are now 16 in existence and two for girls. The aggregate number of pupils has increased from 441 to 470. With the exception of the schools at the sub-divisions, all the rest are mere patshalas. The status of the Agurtolla Anglo-Vernacular school should, it is stated, be raised to the standard of an Entrance school, but so little interest appears to be taken by the Thakurs in it, that there seems little likelihood of this being done. The education of the Jubraj and Burra Thakur is stated to be much neglected. Both of them are intelligent young men, but they are allowed no means of improving their minds or enlarging their ideas so as to fit them for the duties they will one day be called upon to discharge. The Maharaja acquiesces in all that is said to him as to the desirability of allowing them to see something of the world, but financial considerations prevent his doing anything in the matter.

16. There are three dispensaries in the State, in which 4,009 patients were treated as against 3,664 in the previous year. Of these, 3,785 or 94·4 per cent. were cured or relieved, 59 or 1·5 per cent. died, 75 or 1·9 per cent. discontinued their attendance, and 90 or 2·2 remained under treatment at the close of the year. The prevailing diseases were dysentery, diarrhoea, sores, and fever. As noticed above, there were a few sporadic cases of cholera, some of which ended fatally. As remarked last year, the dispensaries are badly managed, and their wants indifferently supplied.

17. The only post-office in the State continues to be the one attached to the Agency, and appears to be in a flourishing condition. Rupees 65,032 were remitted through it in money-orders as against Rs. 43,859 in the previous year. There was a falling off in the value of insured covers from Rs. 13,934 to Rs. 5,395, for which no reason has been assigned. The institution is not only self-supporting, but works at a profit.

18. During the past year the boundary pillars between the State and Sylhet, which were found in 1843-84 by the Topographical Survey Party to be wrongly placed, have been erected in their proper positions during the past year. Some of the masonry boundary pillars between Hill Tipperah and British Tipperah are reported to have been entirely destroyed, while others are in need of repairs. A separate report on this subject has been submitted by the Commissioner.

19. The Assistant Political Agent reports that some of the Hill Tipperah liquor-shops are so close to British territory as to offer great temptations to the inhabitants of the latter to smuggle. He has addressed the Durbar on the subject, and has reason to expect that these shops will be removed to a greater distance from the boundary.

20. The report submitted by the Assistant Political Agent has been carefully drawn up, and contains so much interesting information that it is clear Baboo Uma Kant Dass spares no pains to make himself acquainted with the details of the administration of the State.

By order of the Lieutenant-Governor of Bengal,

F. B. PEACOCK,

Chief Secretary to the Government of Bengal.

RESOLUTION ON THE BOARD'S REPORT ON THE LAND REVENUE ADMINISTRATION OF THE LOWER PROVINCES OF BENGAL FOR 1884-85.

REVENUE DEPARTMENT—LAND REVENUE.

Darje ling, the 12th September 1885.

RESOLUTION.

READ—

The Board's Report on the Land Revenue Administration of the Lower Provinces of Bengal for 1884-85.

The Land Revenue Department of the Board was in the charge of Mr. H. L. Dampier from the beginning of the year to the 26th July 1884, when he retired from the Civil Service. Mr. Reynolds was in charge from the 26th July to the 9th September 1884, and Mr. Peacock from the latter date to the end of the year. The Report is submitted by Mr. Reynolds.

2. *Number of Estates.*—The following statement shows the number on the revenue-roll during the last two years arranged according to the standard system of classification:—

	Class I, permanently- settled estates.	Class II, temporarily- settled estates.	Class III, Government estates.	Class IV, ryotwari tracts.	Total of all classes.
1883-84 ...	143,842	7,785	2,833	26	154,486
1884-85 ...	145,457	7,691	2,913	26	156,087
Difference ...	+1,615	—94	+80	...	+1,601

Under the head of Permanently-settled Estates the constantly recurring process of partition has added 1,615 estates to the roll—a number closely approximating to the average increase during the last seven years. Assessment of alluvial accretions, transfers from Class II to Class III, escheats, resumptions, and purchases at sales for arrears of revenue, account for the fluctuations in the number of temporarily-settled and Government estates; while the number of ryotwari tracts remains unchanged.

3. *Land Revenue Demand.*—The current demand from each class of estates for the last two years is shown thus:—

Class	I	II	III	IV	1883-84. Rs.	1884-85. Rs.
...	3,22,99,847	3,22,98,211
"	II	27,00,892	27,11,757
"	III	20,86,623	21,24,585
"	IV	6,52,525	8,53,133
Total	3,79,39,887	3,79,87,686

Including an arrear demand of Rs. 22,00,716, the total demand for realization during 1884-85 amounted to Rs. 4,01,88,402, against Rs. 3,99,38,487 in the previous year.

The slight decrease in the current demand from permanently-settled estates is due to redemptions under the partition law, and to transfers from this head owing to the purchase of estates by Government at sales for arrears of revenue. Dearah settlements in the Dacca Division are stated to be the chief cause of the rise of demand from temporarily settled estates; and the increase under the head of Government Estates is due partly to the causes noticed in paragraph 2, and partly to new settlements effected at an increased rental. It is observed, however, that, while the average annual increase of demand under all heads during the ten years from 1874-75 to 1883-84 was Rs. 1,51,975, the increment of 1883-84 was only Rs. 77,962, which again fell to Rs. 47,799 in the year under report. The slower growth of this branch of revenue is attributed in part at least to the more lenient assessments made at

recent settlements. This state of things seems likely to continue, and it is improbable that any rapid advance of revenue will be effected by settlements in future; for both in Government estates and in estates under temporary settlement, the operations of the Revenue officers will be controlled by the Bengal Tenancy Act, and the provisions of that Act, while securing to the landlord, whether Government or a private individual, a fair rent in all cases where the existing rent may be unduly low, will effectually prevent any sudden enhancement.

4. *Collections*.—The total collections, both current and arrear, amounted to Rs. 3,71,37,748, or a percentage of 92.41 on the total demand, as compared with 94.03 per cent. in the previous year. Out of this amount, Rs. 16,66,444 were arrear collections representing 75.72 per cent. on the arrear demand; while Rs. 3,54,71,304 were current collections, being 93.37 of the current demand. Under both heads the percentages of realization are below the corresponding percentages of the preceding year. The decline of Rs. 5,05,395 in the current collections was due to delay in the payment of the revenue of the Burdwn estates caused by the death of the Maharajah just before the close of the financial year. The arrear has since been realized.

5. *Remissions and Balances*.—The remissions of revenue granted during the year rose to Rs. 1,24,977 against Rs. 1,03,500 remitted in 1883-84. The largest amount remitted in any district was Rs. 28,259 in Midnapore on account of loss of crops in the Jellamuta and Majnamuta estates arising from the excessive rainfall of 1881. The total outstanding balance from all classes of estates amounted to Rs. 29,25,677, as compared with Rs. 22,00,716 in the previous year. From this, however, should be deducted Rs. 8,00,000, being the purely accidental arrear from the Burdwan estates. Thus the true outstanding balance is reduced to Rs. 21,25,677, or three-quarters of a lakh less than in 1883-84.

6. *Financial results in each class of estates*.—In permanently-settled estates the collections averaged 95.71 of the total demand, against 95.2 per cent. in the previous year; while the outstanding balance rose from Rs. 3,83,041 to Rs. 14,07,616. Deducting, however, eight lakhs due in Burdwan, and certain nominal balances in Darjeeling and Chumparun, the results are, on the whole, as good as in 1883-84. In Wards' estates the balances have risen since last year, but are still slightly lower than in 1882-83. Temporarily-settled estates show much the same percentage of collections, and a smaller outstanding balance than in the past year. The demand, however, was less, and the remissions were much larger. In order to arrive at accurate conclusions regarding the financial results obtained on temporarily-settled estates, it is necessary to distinguish between estates settled with their proprietors for definite periods, and estates managed direct or farmed in consequence of the refusal of the proprietors to engage for the payment of the land revenue assessed. In estates settled with their proprietors, the total uncollected balances were only 6.43 per cent. on the total demand; while the proportion rose to 26.56 per cent. in estates managed direct by Government, and to 36.04 per cent. in estates let out in farm. The heaviest balances occur in Midnapore (Rs. 1,90,111), Backergunge (Rs. 77,940), and in Pooree (Rs. 48,812). In Midnapore the work of collection in the Majnamuta and Jellamuta estates is said to have been proceeding satisfactorily when it was unfavourably affected by a judgment of the High Court throwing doubt on the regularity of the proceedings by which the rates of rent had originally been fixed. No distinct explanation is given of the balances in Backergunge, though it may be gathered that measures are being taken to realise them by the certificate procedure. Of the arrear in Pooree, a large portion has been realised since the close of the year, and the remainder is accounted for by postponements of rents on account of floods. The amount of actual remission that will be necessary is still uncertain.

Turning now to Government estates, it is observed that the percentage of collections to the total demand has risen from 63.36 per cent. in 1882-84 to 67.91 in the year under report. These results, though better than those of the previous year, cannot be regarded as satisfactory, nor do the explanations furnished in the report of the specially heavy arrears which have accrued in some districts throw any clear light upon the real causes which have led

to the accumulation of these balances. In many cases, indeed, the explanations furnished by the local officers are couched in such vague and general terms that it has been as difficult for the Board as it is now for the Lieutenant-Governor to arrive at a distinct understanding of the actual state of things. There can be no doubt that, where the Collector finds himself burthened with the management of numerous scattered estates, prompt collections can hardly be looked for. Here it is proposed that relief should be given by disposing of some of the smaller estates, and the proposal is still under the consideration of Government. Should it be sanctioned, some measure of relief will, no doubt, have been given; but it by no means follows that this will of itself be sufficient to produce a substantial improvement in the matter of collections. Administrative reforms will then have to be taken in hand, and the first of these will be a careful examination by each district officer of the condition of every Government estate in his district, with the object of ascertaining the causes of fluctuations in the collections, and of introducing such reforms as may ensure regularity of payment in future. Nothing short of a minute enquiry into the circumstances of each individual estate will, the Lieutenant-Governor is satisfied, be of any avail to remove the defects of the present system of administration.

7. *Results of Direct Management.*—Comparing the results of direct management in 1884-85 with those recorded in the previous year's report, it is observed that the number of estates under management was 1,251 with an annual rental of Rs. 28,06,433, against 1,323 estates with a rental of Rs. 27,50,451 in 1883-84. Of these, 1,039 were the property of Government, while 212 belonged to private owners who had refused settlement. Including an arrear balance of Rs. 10,24,864, the total demand of the year was Rs. 38,31,297, out of which Rs. 27,26,762, or 71·1 per cent., were realised, the corresponding percentage of the previous year being 66·8. The percentage of collections on current demand was better by 1 per cent. than that in 1883-84.

8. *Improvements, &c.*—It follows from what has been said above that in 1884-85, as in foregoing years, the management of estates under the direct charge of district officers consisted for the most part of attempts, more or less sustained and continuous, to realise certain amounts of rent by means of an agency not more than barely sufficient for that purpose. That such a system as this should produce any well-considered works of permanent improvement is hardly to be expected. Small sums have been spent on the construction of works for the irrigation of estates and for their protection from floods, and larger sums on sundry works, the precise nature of which is not specified. Among agricultural improvements properly so called, the only improvement really appreciated by the cultivators is the Behea Sugar Mill. This has made its own way in Behar and the more accessible parts of Bengal, and an agency started at Kushtea for hiring out Behea mills is said to be doing a large and prosperous business. Hiring is preferred by the cultivators to purchase, as, in the event of anything going wrong with a machine, they can get another from the supplier. In more remote districts, where private enterprise has yet to make its way, the mills have been introduced on Government estates by the local officers. Experiments were made in a few districts with improved ploughs, but they are said to have been on the whole unsuccessful, and even where some measure of success was attained, the possible demand for invention was limited by the standard difficulty that the ordinary ryot either cannot or will not pay a high price for an implement which he has been accustomed to get for next to nothing. On this point the Commissioner of the Presidency Division remarks that—

“The late International Exhibition held in Calcutta does not seem to have had any effect on husbandry in the introduction of improved methods of agriculture. The machinery exhibited and worked experimentally was generally of a kind too ambitious to meet the requirements of the generality of Indian agriculturists, as they are poor and have not the means to buy expensive implements.”

Three experimental *silos* were constructed in the Patna district. The ensilage is said to have been “more readily taken by buffaloes than by any other animals,” and a hope is expressed “that some of the ryots will be induced to try the experiment themselves.” An Agricultural Exhibition was held at Dumraon in February last, in which 33 prizes and 42 “honourable

mentions" were won by ryots who "themselves accompanied the exhibits and are reported to have taken a keen interest in the Exhibition."

9. *Surveys*.—Comparatively little survey work was done during the year. In Midnapore the revision of the former survey still continues, and fair progress appears to have been made. In Sarun and Shahabad the boundary between Bengal and the North-West Provinces was demarcated in accordance with the deep stream line of the rivers by officers from both Provinces. The survey of ghatwali lands in Bankoora was stopped in September 1884 owing to the expensive mode of procedure adopted, and has since been resumed under a simpler system which promises to bring the work to a more rapid conclusion. The ghatwali survey in Singbhoom was brought to a close by a compromise with the zemindar of Dhulbhoom on the same general lines as were followed in the case of the Burrabhoom zemindar in Manbhoom. In both cases the result of the arrangement has been to leave the ghatwals in possession of tenures amply sufficient for the maintenance of the service they render, and to save Government and all persons interested in these lands from vexatious litigation, which could hardly have failed to have seriously disturbed the peace of the districts concerned.

10. *Settlements*.—Including settlements of all kinds, 796 cases were disposed of during the year, yielding an increase in revenue of Rs. 25,503, against an increase of Rs. 64,479 in the previous year. The divisions showing the heaviest increases were Dacca (Rs. 6,768) and Chittagong (Rs. 10,509). In the three districts of Patna, Mozufferpore, and Sarun there was a decrease of Rs. 2,794, of which no explanation is given. In the Government estate of Khoorda the revision of the papers showing the reduction of rent ordered in 1883 has nearly been completed, and 85,294 kabulyats have been executed, leaving 50,752 still to be signed. The progress made indicates that the ryots are satisfied with the settlement as now modified, and it is anticipated that the interchange of pottahs and kabulyats will now be completed without any difficulty. In the Majnamuta and Jellamuta estates in Midnapore the revision of errors of detail in the settlement is in progress. The objections raised to the assessment were referred in May last to a Conference of Government officers and representatives of the ryots, and after considering the results of their discussions, the Lieutenant-Governor finally decided to offer to those ryots who have appealed to the High Court against the settlement a reduction of three annas in the rupee on the rent assessed. The local officers are now engaged in ascertaining whether the appellants are willing to accept this compromise. In Chittagong the intricate group of questions arising out of the settlement of the Noabad taluks has now been disposed of, and the settlement will be completed on lines laid down after thorough discussion of all the issues involved. In dealing with all these questions, careful regard has been paid to the principles affirmed in the Bengal Tenancy Act, which will in future impose upon Revenue officers engaged in making settlements of Government estates precisely the same limitations as are imposed upon private landlords.

11. Paragraphs 122 to 134 of the Board's Report, which relate to irrigation, drainage and embankments, will be dealt with in the Public Works Department of Government.

12. *Land Registration*.—The work of initial registration of proprietary interests in estates and revenue-free properties has been completed, except as regards some office details in 34 out of the 43 districts, where the Land Registration Act is in force. Of the remaining nine districts the work is nearly complete in Hooghly, the 24-Pergunnahs, and Balasore; while satisfactory progress has been made in Calcutta and Moorshedabad. In Cuttack many cases are still pending, but the work is rendered peculiarly intricate by the large number of revenue-free holdings, of which the estate of Killah Banki, recently annexed to the Cuttack district, contains no less than 38,433. The progress made in Midnapore and Chittagong was far from satisfactory, and in the former district the delay in disposing of cases is wholly unexplained.

Reviewing the results of the working of the Act up to the present stage of completion, it is observed that 914,985 proprietary interests in estates and revenue-free properties have been registered throughout Bengal, the number of such interests varying from 287,642 in the Patna Division, where partition is greatly in vogue; to 1,894 in Chota Nagpore, where many of the estates are

impartible under local custom affirmed by Regulation X of 1800. It appears, however, that during the past year the number of mutations registered was only 3·3 per cent. of the initial registrations, and that of these only 1·4 per cent. were occasioned by the death of the former proprietor. Seeing that the death-rate among landowners must largely exceed 14 per 1,000, it follows that many successions to estates remain unregistered, and that more stringent measures must be taken to enforce compliance with section 42 of the Act. With this object proposals for the amendment of the law have recently been submitted to the Government of India. In the meantime, the rules which the Lieutenant-Governor proposes to make under section 189 of the Bengal Tenancy Act will have the effect of completing the proprietary record in any areas where a record of rights may be undertaken under Chapter X of the Act, and will probably tend indirectly to promote the registration of mutations throughout the districts affected.

13. *Road Cess and Public Works Cess.*—The following statement compares the results of 1884-85 in respect of the realization of these cesses with those of the preceding three years :—

	DEMAND.			BALANCES.			Deduct remissions.	Net arrears.	Percentage of net balance on gross demand.
	Current.	Arrear.	Total.	Current.	Arrear.	Total.			
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1880-81	69,14,587	9,22,041	78,36,628	10,00,326	1,84,820	11,85,146	17,523	11,73,623	14·9
1881-82	70,10,094	11,71,062	81,82,056	9,54,618	1,92,233	11,47,051	10,141	11,36,100	13·8
1882-83	73,10,811	11,42,291	84,53,102	10,00,330	1,77,300	11,80,730	27,940	11,58,790	13·7
1883-84	73,70,697	12,60,272	86,30,969	13,50,778	2,04,190	16,20,974	26,083	15,98,891	18·4

The fact that the arrear balance has risen by Rs. 3,33,709 is attributed partly to scanty crops, partly to the last day of payment having fallen within the Doorga Poojah holidays, and chiefly to the inclusion, under section 70 of the Act, of the demand from rent-free holdings in certain districts with three years' retrospective effect. To the latter cause in particular is attributed the large increase in the arrear demand, and the accumulation of arrear balances at the close of the year. The proposals made by the Board for dealing with this difficulty will be considered in the Financial Department.

14. *Operations of the Sale Law*—Of 10,575 estates, shares of estates, and interests in estates which became liable to sale for arrears of revenue during the year, 1,836 or 17·3 per cent. were actually sold. The corresponding figure for the previous year was 2,225, or 20·6 of the properties liable to be sold. These statistics tend to show that practical effect has been given to the policy of leniency which the Government has repeatedly enjoined on officers entrusted with the working of the Sale Law; and the inference is borne out by the complaint of the Collector of Hooghly that this policy tends to make the sale day a sort of second kist day; as defaulters, when their estate is called up for sale in its proper order, present a petition under section 18, produce the amount of the balance and claim exemption as a matter of course.

Of the estates sold, 213 were bought in by Government at nominal prices, and with regard to these it may be inferred that, either from diluvion or other causes, they were no longer able to bear their permanent revenue. As to most of the others, it is reported that the owners voluntarily fell into arrears in order to sell with a more valuable title. This can only mean that their intention was to sell free of those encumbrances, for which, in the majority of cases, they or their predecessors in title had received valuable consideration. One instance of this fraud upon tenureholders has been reported to the Board by the Commissioner of Chittagong, who writes—

“The Collector has now reason to believe that the sale was forced in order to break up the tenures, and that the estate has been re-purchased *benami*. In reporting this case, Mr. Barooah remarks that he quite agrees with the Board that such sales should be discouraged, but that he sees no provision in the law which enables him to do so, and in this he is quite right.”

The Lieutenant-Governor fully agrees with the Board in pronouncing the Commissioner's and Collector's opinion to be incorrect. In his view the right to sell an estate under Act XI of 1859 is a right to be exercised by the Government alone in the interest of the revenues of the

State, and it is within the discretion of the Collector, under section 18 of the Act, to accept arrears from any person who may tender them with the object of staying a sale. This amount of protection tenureholders can fairly claim under the law as it stands now. The question of affording to them, and to the holders of undertenures, further protection by amending the law in accordance with the principles embodied in chapter XIV of the Tenancy Act is now under the consideration of the Lieutenant-Governor.

15. *Working of the Public Demands Recovery Act.*—The following statement sums up the main heads of information regarding the working of Act VII (B.C.) of 1880:—

	Number pending from last year.	Number filed during the year.	Total.	Disposed of during the year.	PENDING.		
					More than six months.	Less than six months.	Total.
Demands of all kinds under section 5	1,716	3,497	5,213	3,755	431	1,027	1,458
Arrears of rent due to Government, clause 6, section 7	23,099	37,067	60,166	41,058	5,723	13,365	19,108
Embankment dues, section 50, Act VI (B.C.) of 1873	1,739	13,079	13,818	7,638	1,010	5,170	6,180
Water-rates, Act III (B.C.) of 1876	49,864	13,445	63,309	29,665	20,148	13,396	33,544
Cesses, Act IX (B.C.) of 1880	36,659	74,802	110,461	75,528	11,634	22,999	34,633
Demands of the Court of Wards, clause 7, section 7	7,085	8,000	15,085	8,864	4,249	1,972	6,221
All other certificates under section 7	16,428	24,384	40,812	27,179	5,015	8,018	13,033
Total	135,690	173,474	309,164	193,685	49,110	66,269	115,379

The decrease in the number of certificates filed shows that greater discretion has been exercised in resorting to this procedure than was the case in former years. It is observed at the same time that the number of sales has risen from 3,899 to 8,599, owing to an unexplained increase in the sales held in the Patna Division from 294 in 1883-84 to 4,862 in the year under review. In the Chittagong district the number of certificates issued to realise rents due to Government has risen from 1,054 to 5,392. This it is explained is due to the temper of the people, who, though well able to meet the Government demand punctually, delay payment partly out of sheer indolence, and partly in the ignorant expectation of gaining some indefinite advantage by withholding their rent until actually compelled to pay. The local officers seem to have thoroughly apprehended the position, and to be attempting by various devices to reduce the number of certificates as low as possible.

16. *Redemption of Revenue; Land Acquisition; Waste Lands; Patwaris.*—During the year under review increased resort was had to the privilege of redeeming Government revenue, and Rs. 11,385—an amount largely exceeding the receipts under this head for many years past—was paid as the price of redemption. No reason is assigned for this increase, and it may perhaps have been the case that it was due to no general cause, but arose from special circumstances inducing a few landholders to redeem. It is observed that most of the redemptions occurred in Calcutta and its neighbourhood.

The area of land acquired under Act X of 1870 for various public purposes during the year was 2,946 acres, for which Rs. 3,12,072 were paid as compensation. In the course of the proceedings for the acquisition of land for the Bengal-Nagpore State Railway, it was brought to notice that Act X of 1870 made no provision for the contingency of minerals underlying land taken up for public purposes, and that the Act was so worded as to compel Government to acquire the minerals and pay compensation at their full market value. As soon as this difficulty was reported, the acquisition proceedings were suspended, and the Government of India was moved to undertake legislation on the lines of the English law on the subject. The owners of minerals underlying the land already acquired have since, at the instance of this Government, consented to claims accruing under the existing law being dealt with under any Act fairly embodying the provisions of sections 77 to 85 of the English enactment (VIII and IX Vic., c. 20), which governs similar questions in England. The Lieutenant-Governor takes this opportunity of acknowledging the good sense and moderation with which his proposals have been accepted by the representatives of the coal-mining interest in Bengal.

Under the head of Waste Lands, the only fact calling for special remark is a considerable extension of the area granted for tea cultivation in Julpai-gori, where 22,346 acres were taken up during the year under review.

The re-organization of the putwari system in the Patna Division, commenced in 1876, was completed during the year, and, with the exception of 32 villages, where putwaris have still to be appointed, every village, on a revenue-paying estate throughout the Patna Division, and in the Monghyr district of the Bhagulpore Division, has a putwari duly appointed and properly registered. It remains to define precisely the legal status of these officials; to secure that their records shall be accurate and complete; and to place them more fully under the control of the Collector of the district. All these objects are provided for by the Bill relating to Canoongoes and Putwaris now under the consideration of Government. In Orissa both canoongoes and putwaris are reported to have done useful work.

17. *Relations between Landlord and Tenant.*—In the Presidency, Bhagulpore, and Rajshahye Divisions, the relations between landlord and tenant have, on the whole, been satisfactory. In the Pubna district of the Rajshahye Division, formerly the scene of serious agrarian disturbances, the present peaceable state of things is attributed to the fact that the ryots have learned the power of combination and passive resistance, and have frequently applied it with considerable effect. This the zemindars have perceived, and have compromised their disputes with their ryots in most cases. No instances of undue pressure being put on the ryots for the payment of rents have been heard of.

From all districts of the Patna Division, except Durbhunga, a similar account is given. In Durbhunga alone an attempt was made by some zemindars to raise the rates of rent and destroy rights of occupancy.

From Mymensingh Mr. Glazier, the Collector, reports—

“The relations between zemindars and ryots have continued unsatisfactory. They are worst in Kagmari pergunnah, Tangail sub-division, and several breaches of the peace have occurred. Two attempts have been made to bring the parties to a settlement, the first by myself in August, and the second by the Commissioner in February; but at the close of the year no improvement in the relations was discernible. In the Mymensingh pergunnah, lying in the Sudder and Netrokona sub-divisions, matters are quieter than last year. The zemindars are taking the rents paid by the ryots, but no final agreement has been arrived at. In my tour I found that the ryots had a just ground of complaint; that money they paid for current rent was credited to old arrears, and in many cases they got no receipts. It is a great pity that the new Tenancy Act does not allow the Collector to enquire judicially into these complaints, instead of giving the ryot his only remedy in a civil suit. In the large pergunnah of Sherepore in the Jamalpore sub-division, the old relations still continue between zemindars and ryots. The zemindar's word is law, and they are now very busy in obtaining kabuliyats of two, three, or five years' duration and sowing a crop of future trouble. In Patiladaha pergunnah, in the same sub-division, the estate (a part of the late Prosanna Kumar Tagore's property), is scientifically exploited. Strict kabuliyats are the rule: no illegal measures are adopted, but the ryots are legally harassed by successive suits for arrears.

“It may be worth while to specify an instance in which I made some endeavours to settle matters between a zemindar and some recalcitrant ryots in pergunnah Alapsingh, the central pergunnah of the district. I succeeded in inducing the ryots to pay and the zemindar to receive a portion of the current rent, and in thus removing a distrait which threatened a breach of the peace; but in going over the old accounts at the request of the zemindar, I found the views of the opposite parties to be too divergent to give any chance of a final settlement, unless I was empowered by law to enforce one. It may be interesting to give some particulars of the case. The estate had been under a succession of farmers, and there was thus no fixed assessment, the ryots maintaining that the proper sum was Rs. 6,045, the zemindar claiming Rs. 10,964. The ryots had been making payments into court for some years and (taking credit for Rs. 3,644 on this account) admitted only Rs. 2,401 to be due. The zemindar, on the other hand, would not give credit for any of these payments, and added to his principal a sum of Rs. 8,093 for interest, thus making a total claim of Rs. 19,057 as against the ryots' admission of Rs. 2,401. The zemindar's agent confessed that if they went into court they would not obtain more than the ryots admitted, except in a few cases where they had kabuliyats, and he proposed to have the estate measured, and then enhance by suit.”

In Backergunge a somewhat similar state of things seems to prevail. The Collector writes—

“The relations between landlord and tenant in this district are not in a satisfactory state. Combinations amongst ryots exist in several zemindaries, and there is much general disposition to withhold rents. This complaint is general in Dakhin Shabazpore sub-division, while in parts of thana Mendigunge the ryots complain of exorbitant demands made by zemindars and talookdars on account of illegal cesses, road cess, &c. It came to light during the year that zemindars were levying road cess from their tenantry at maximum

rates, although only half rates are here levied by the Committee. Government, on a reference made, has directed that Deputy Collectors and Assistants, when out on tour, should explain the rate of cess to the ryots, but that the issue of general notices prohibiting the payment would be inexpedient, as the rate is liable to be changed every year."

As to Mr. Glazier's remark that the Tenancy Act should have allowed the Collector to enquire judicially into complaints brought by ryots of having got no receipts for rent paid, it is to be observed that any such division of jurisdiction between the Collector and the Civil Court would have been inconsistent with the principles of the Act. The question whether a ryot has made a particular payment and has got a receipt for it is essentially a question of evidence, and could only be properly dealt with by the Civil Courts; and in Eastern Bengal, at any rate, the experience of the last few years does not indicate any reluctance on the part of the ryots to assert their rights in the Civil Courts. Regarding the larger and more general grounds of disputes mentioned by the Collectors of Mymensingh and Backergunge, it is possible that some of these can only be set at rest by the preparation of a record of rights under Chapter X of the Tenancy Act; and if the present state of things continues, the Lieutenant-Governor will have no hesitation in applying this effectual remedy.

Indications are not wanting that the spirit of agricultural independence which prevails in many parts of Bengal Proper is beginning to spread to Orissa. Thus the Collector of Balasore writes—

"It is beyond doubt that the tenantry are beginning to lose that old feeling of half-filial respect for their landlords which used to characterize the Uriya peasantry so strongly. It is also beyond dispute that the chief reason of this is the fact that the landlords are ceasing to take any active part in the management of their estates, which they are handing over to strangers, who pay the landlord the full legal rents, and make what profit they can out of the ryots by means that can hardly be legal."

In other words, the patriarchal relation between landlord and tenant, hitherto supposed to be peculiarly characteristic of Orissa, is beginning to be affected by the general movement from status to contract, which has already begun in the more progressive parts of Bengal. The transition may be regretted, but is nevertheless inevitable; and it is one of the objects of the Tenancy Act to invest the executive officers of Government with such powers as may enable this transition to be effected with the minimum of friction and disturbance.

In Chota Nagpore the old landholding families of the Division, finding themselves greatly impoverished by mismanagement, are following the example of the same class in Orissa by handing over large portions of their estates to farmers, who work the land upon purely commercial principles. Searching methods of management are introduced; lands are measured and systematically assessed; claims to hold at privileged rates are enquired into; and a process of levelling up rentals is set on foot. Discontent necessarily follows, and a state of things such as is said to prevail in Manbhoom comes to be established. Here the Commissioner writes—

"In Manbhoom matters have been in a very unsatisfactory state in pergunnah Burra-bhoom, where there is very great opposition to the introduction of indigo-planting by Messrs. Watson and Company, the new ijaradars of the pergunnah. This opposition is strongest in the ghatwali villages, the holders of which have hitherto held large areas of land practically rent-free. It is said that the feeling of discontent in this pergunnah is kept alive for their own purposes by a number of Brahmin tenants, to whom the presence of strong landlords like Messrs. Watson and Company is specially unwelcome."

The question of Messrs. Watson and Company's operations in Manbhoom has been already brought to the notice of Government. The settlement arranged by the Deputy Commissioner between the Company and their ryots in 1883 was quoted with approval in paragraph 73 of the Report of the Government of Bengal on the Tenancy Bill, dated the 15th September 1884; while the compromise effected between the ghatwals and Messrs Watson and Company, regarding the excess areas of lands which the former had got possession of in excess of their tenures, was expressly approved by Government after full consideration in 1884. This being so, the Lieutenant-Governor expects the Deputy Commissioner to do everything in his power to maintain these arrangements and to enforce the responsibility of the holders of police tenures

for the preservation of the peace within the areas under their charge. In respect of the introduction of indigo-planting, the local officers must maintain an impartial attitude, and see that neither party is allowed to infringe the clear provisions of the law.

18. *Minor administrative matters* — Under this head of the Report are included various questions which need not be reviewed in detail here. The Lieutenant-Governor will merely remark that the omission of certain Collectors and Deputy Commissioners to carry out the orders requiring them to inspect their offices half-yearly cannot be looked upon as a matter of routine. A district office is a large and complicated machine, and if it is allowed to fall into disorder public business suffers and mistakes are made which may have the effect of seriously misleading Government upon important questions. Mr. Cockerell cannot allow that either oversight or want of leisure are sufficient grounds for neglecting a duty which has a very direct bearing upon the efficiency of district work.

As to the training of young Civilians in survey and settlement work, the Lieutenant-Governor agrees with the Board that their instructions on this subject have not received the attention which the importance of this branch of a district officer's duties demands. The cadastral survey of Mozufferpore, which is about to be undertaken, will, however, furnish an excellent means of imparting training of a most practical kind to junior officers stationed in Behar; while any similar operations which may be undertaken in other parts of Bengal may be utilized for officers stationed within a reasonable distance. The Lieutenant-Governor would be glad to be favoured with an expression of the Board's opinion as to the feasibility of this plan, accompanied by suggestions for giving effect to it in detail.

19. The Lieutenant-Governor desires to thank Messrs. Reynolds and Peacock for their administration of the Land Revenue Department during the past year. The names of the officers mentioned in paragraph 286 of their Report as deserving special commendation will be considered in the Appointment Department.

By order of the Lieutenant-Governor of Bengal,

H. H. RISLEY,

Offg. Secretary to the Government of Bengal.

THE following are published for general information.

H. H. RISLEY,
Offg. Secretary to the Govt. of Bengal.

No. 1452T—R, dated Darjeeling, the 7th September 1885.

From—H. H. RISLEY, Esq., Officiating Secretary to the Government of Bengal,
Revenue Department,

To—The Manager of the Durbhunga Raj.

I AM directed to acknowledge receipt of your letter No. 5800, dated the 28th August 1885, enquiring whether, under section 59 of the Bengal Tenancy Act, landlords are obliged to purchase forms of rent receipts from the Government.

2. In reply, I am to say that section 59 of the Tenancy Act is intended merely to render standard forms of receipt readily procurable by landlords who have not the means of getting such receipts printed on a large scale for themselves. All that the Act requires is that every receipt for rent given by a landlord to a tenant shall contain substantially certain particulars, and provided, that this condition is complied with, it is immaterial whether the receipt form is purchased from Government, printed at a private press, or written by hand.

3. In order to remove all possible misapprehensions on the subject, your letter and this reply will be published in the *Calcutta Gazette* for general information.

No. 5800, dated Durbhunga, the 28th August 1885.

From—COLONEL R. C. MONEY, B.S.C., Manager, Raj Durbhunga,

To—The Secretary to the Government of Bengal, Revenue Department.

I HAVE the honour to request that you will kindly inform me whether, under the next Rent Act, section 59, we are obliged to buy forms of receipts from the Local Government, or whether I can have what we need printed, in the Government form, in our own press.

A very early answer will oblige, as the number of receipt forms we shall need is great, not less than 2,500 books containing 200 receipt forms each.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 12th September 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
<i>Western Districts.</i>			
BURDWAN DIV.	1 Burdwan, Sept. 12 '85	1.55	Weather—seasonable. Prospects of crops good except in inundated parts. Price of rice 10 to 14½ seers per rupee. Health generally good.
	Culna ..	1.55	
	Cutwa ..	8.72	
	Rancegunge ..	3.49	Weather—seasonable. <i>Aus</i> being harvested. Considerable loss reported from Bishenpur in consequence of late floods. Prospects of <i>aman</i> crops continue promising. Rice selling at 14 to 22 seers per rupee. Health good.
	2 Bankoora, „ 12 „	0.93	
	Bishenpur ..	2.39	Heavy rain in the beginning of the week. Prospects of rice crop generally good. Transplanting nearly finished. Prices of food-grains continue high. Health of people satisfactory except for cases of cholera.
PRESIDENCY DIV.	3 Beerbhoom, „ 12 „	5.47	
	Ranpore Haut ..	6.57	Weather—hot and generally dry. The comparative cessation of rain is at present beneficial, but it will be injurious if it lasts much longer. <i>Aus</i> crop damaged by excessive rain in August. <i>Aman</i> on higher lands doing well.
	4 Midnapore, „ 12 „	0.11	
	5 Hooghly, „ 12 „	1.79	Weather—seasonable now, hot and sunny in the last two days of the week. Prospects of the crops remain unfavourable, as the flood has not yet subsided. Fever still prevalent.
	Jehanabad ..	4.14	
	Howrah, „ 12 „	1.00	Sky cloudy. Slight showers now and then. Nearly three-fourths of the rice crop in the district are said to have been destroyed by the floods. The rest is in good order. Every effort is being made to drain off flood water. Health good.
PRESIDENCY DIV.	Osooboriah ..	4.20	
	<i>Central Districts.</i>		Weather—hot for the season. Prospects of <i>aus</i> crops are a little better. <i>Aman</i> plants on high lands are doing well. Fever as usual in this season appears here and there.
	6 24-Pergha, Sept. 12 '85	1.08	
	7 Nudda, „ 12 „	10.37	Heavy rain during the week, the last two days were clear. The height of the floods rose during last week, and consequently more damage was done to the standing crops. Harvesting of <i>aus</i> paddy on the higher lands continues.
	Meherpur ..	7.61	
	Kooshtea ..	6.97	
	Choodanga ..	7.91	
PRESIDENCY DIV.	8 Khoosla, „ 12 „	1.09	Weather—cloudy; bright at close of week. <i>Aus</i> paddy harvest completed in Bagihat, and reported good; in Satkhira slight damage by flood. <i>Aman</i> paddy transplanting continues; slight damage from water and insects. Public health good.
	9 Jessore, „ 12 „	3.22	
	Jhenida ..	3.50	Weather—rainy, but dry in the latter part of the week. Harvesting of <i>aus</i> paddy not yet finished. Incessant rain and inundation have caused some injury to this crop. <i>Aman</i> crop also in danger in some places owing to inundation. Prospects of this crop reported to be bad in the Bongong sub-division, which has been visited by inundation. Fever almost everywhere.
	Magora ..	6.37	
	Narail ..	2.51	
	Bongong ..	4.36	Weather—seasonable. The high floods of the Padma and other rivers have almost entirely destroyed the <i>aus</i> crop. The <i>aman</i> in the <i>rark</i> is doing well, except on low lands, where it has also been destroyed by the floods. Public health fair. Common rice selling at 10 or 12 seers per rupee.
RAJSHAHY DIV.	10 Moorsheadabad, „ 12 „	4.63	
	Lalbach ..	6.59	
	Kandi ..	2.15	Report not received.
	Jungipore ..	7.35	
	11 Dinagepore, „	Weather—rather heavy rain at beginning of week; latter part more settled. Harvesting of <i>aus</i> paddy continues. Prospects generally fair, except where damage has been done by floods. Fever general.
	12 Rajshahye, „ 12 „	4.07	
	Nattore ..	6.98	
RAJSHAHY DIV.	Nowgong ..	6.90	Weather—close with occasional rain and cold easterly wind. Harvesting of <i>aus</i> has been brought to a close. Transplanting of <i>aman</i> going on. Jute is being cut and stored. The rainfall during the week has done much good to the <i>aman</i> transplanting in the Kurigram sub-division. Malignant fever is unusually prevalent in the Sudder station. Public health otherwise good.
	13 Itanogore, „ 12 „	1.49	
	Kurigram ..	5.71	
	Nilphamari ..	4.7	Weather—early part of week wet, latter part dry. A couple of slight shocks of earthquake during the week. Prospects of crops continue to be favourable. <i>Aus</i> is being reaped. Public health fair.
	Gaibanda ..	4.53	
	14 Bogra, „ 12 „	3.98	Weather—cloudy and rainy. Rivers falling slowly. Prospects of crops very good. Public health fair.
RAJSHAHY DIV.	15 Pubna, „ 12 „	7.96	
	Serajgunge ..	5.95	Weather—wet; getting colder. The current harvest of all produce except jute has turned out below expectation owing to the wet, but is average. Prospects all good.
	16 Darjeeling, „ 12 „	5.59	
RAJSHAHY DIV.	17 Julpigoree, „ 12 „	1.18	Morning and evening very cool. A good deal of cloud. All crops looking well and prospects at present very favourable. Cattle-disease very bad in Alipur and Fallacotta. Two shocks of earthquake felt at Alipur on Saturday, the 6th, at 12 30 P.M.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.—<i>consolid.</i>			
Eastern Districts.			
Dacca Division.	18 Dacca, Sept. 12 '85	5.84	Weather—cloudy and incessant rain during the week. <i>Amu</i> paddy and jute being cut; outturn good. Prospects of <i>amun</i> good. Public health good.
	Manickgunge ...	8.48	
	Munshigunge ...	3.40	
	Naraingunge ...	5.65	
	19 Furrredpore, " 12 "	4.82	Weather—cool with much rain. Rather too much water, but prospects generally good. Sunshine badly wanted for threshing. Prices in consequence rising.
	Madaripore ...	3.11	
	20 Backergunge, " 10 "	5.73	Weather—seasonable. Much rain. Transplanting of <i>amun</i> nearly over. Constant rain has caused slight damage to the harvested <i>am</i> paddy. General health good.
	21 Mymensingh, " 11 "	11.16	
	Jamalur ...	6.69	Heavy rain throughout the district, especially on the 7th instant, when 6.87 inches fell at Mymensingh. A smart shock of earthquake on the noon of the 5th instant. Jute and <i>am</i> rice still being cut. Prospects of <i>amun</i> rice excellent.
	Kishoregunge ...	14.26	
	Attia ...	4.84	
	Netrokona ...	8.68	
Chittagong Divn.	22 Chittagong	Report not received.
	23 Noakholly, Sept. 11 '85	5.08	Weather—seasonable. Wind generally southerly and sometimes northerly. Reaping of <i>am</i> nearly completed; about two annas of the crop destroyed by the late rain. Transplanting of <i>amun</i> continues.
	Fenny ...	11.10	
	24 Tipperah, " 10 "	5.04	Weather—unsettled with constant showers. Rice appears a magnificent crop. Jute giving fair returns, and sugarcane promises well. Public health has improved owing to the heavy rainfall. Price of rice rising.
	Brahmanbariah ...	13.28	
	Chandpore ...	3.65	Heavy rain throughout the week. Harvesting of <i>joom</i> paddy still continues. Prospects of sugarcane and cotton good. Public health slowly improving.
	25 Chittagong Hill Tracts, " 8 "	6.44	
Patna Divn.	Hill Tipperah, " 9 "	6.07	Weather—rainy. Transplanting of <i>amun</i> paddy continues. <i>Joom</i> crops still being reaped. Prospects of sugarcane fair. Public health good.
	26 Patna, Sept. 12 '85	6.76	
	Dinapur ...	2.74	Weather—hot. <i>Bhadai</i> crops on low and <i>dearah</i> lands have been greatly damaged by the unusual overflow of the Ganges. Transplanting of paddy still continues. Cholera still reported from the sub-divisions.
	27 Gya, " 12 "	4.14	
	28 Shahabad, " 12 "	1.07	Weather—cloudy. <i>Bhadai</i> has been slightly damaged in Nowada and Jehanabad. Prospects of rice crop good. Cholera reported from Husna only. Prices slightly easier, and general health improved.
	Buxar ...	4.75	
	Sasseram ...	2.5	Weather—warm and bright with occasional clouds. Transplanting of rice seedlings completed. Harvesting of <i>bhadai</i> progressing. Prospects of <i>aghani</i> rice favourable, and the break in the rains will further improve them. Fever reported from Sasseram and Buxar. Cholera abating.
	Bhabhua ...	5.49	
	29 Durbhunga, " 12 "	7.94	Weather—very wet. Transplanting of paddy nearly over, and prospects seem to be promising. <i>Bhadai</i> crops have been very nearly harvested. Some injury has been done to them by the late excessive rain. A break in the weather for a few days is absolutely necessary. Prices still continue stationary. Public health generally good.
	Tajpur ...	5.25	
	Madhubani ...	6.67	Weather—cloudy and rainy, but now bright and hot. Maize harvest has commenced. Prospects generally good, but considerable damage from inundation. Public health indifferent.
	30 Mozufferpore, " 12 "	3.35	
	Hajipur ...	2.19	Weather—bright and sultry. A break in the rains. <i>Bhadai</i> crops fast ripening (though in places injured by excessive rain), and the harvest will shortly commence. Prospects of winter paddy continue good. Cholera abating.
	Sitamarhi ...	3.26	
	31 Sarun, " 12 "	0.23	Weather—seasonable. Excessive rain has done some damage to <i>makai</i> and other <i>bhadai</i> crops. Prospects of <i>aghani</i> crops excellent except where injured by caterpillars. Prices have fallen slightly. Cholera has somewhat abated both in town and the interior.
	Sewan ...	2.65	
	Gopalgunge ...	0.85	Very heavy and continuous rain. Prospects of <i>aghani</i> good; transplanting completed. Cholera has abated. Prices steady.
	32 Champarun, " 12 "	1.89	
Bhagalpur Divn.	33 Monghyr, Sept. 12 '85	6.09	Heavy rain in the first part of the week; weather finer the last three days. Prospects of <i>bhadai</i> crops and winter rice in the north very good; some damage has been done to the <i>bhadai</i> , which is being harvested, by the wet weather, but for this it would have been a bumper crop. <i>Murwa</i> selling at a price a seer. Prospects in the south unaltered. A break in the rains is wanted. <i>Janera</i> outturn has been good except where the floods destroyed it. <i>Janera</i> is selling at 25 seers per rupee. Cholera very bad in Banka, and some cases have occurred in Bongaon.
	Beguserai ...	7.66	
	Jamui ...	6.80	Weather—fine and hot. <i>Aghani</i> transplanting nearly finished, but very late in parts. <i>Bhadai</i> harvest good, except in tract flooded by Ganges. Fever prevalent, Ganges highest this year about 7th September; it has since fallen considerably.
	34 Bhagulpore, " 12 "	12.69	
	Banka ...	9.66	Weather—first part of the week cloudy and rainy; last three days clear and sunny. Prospects of winter rice continue good. Rivers falling. Common rice 14 seers per rupee at English Bazar. Public health fair.
	Muddehpoorah ...	5.17	
	Scoopole ...	4.35	There has been a change in weather with the change of moon, and barometer has risen from 29.23° on the 5th to 29.46° today (12th). Storm of previous week appears to have subsided. Moderate rain everywhere but in Pakour and Godda. In the latter sub-division enormous ruin has done some damage to Indian-corn. Rice doing well everywhere. Floods in Rajmehal continue unabated, and there is no hope that any of the submerged crops will survive. Cholera still prevalent here and there.
	35 Purneah, " 12 "	6.06	
	Kissengunge ...	4.54	
	Arrareah ...	2.46	
	36 Maldah, " 12 "	7.37	
	Chanchal ...	2.22	
	Gazole ...	6.2	
	37 Sonthal Pergas, " 12 "	3.31	
	Deoghur ...	3.51	
	Godda ...	14.39	
	Rajmehal ...	2.6	
	Jamtara ...	1.52	
	Pakour ...	7.19	

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, Sept. 11 '85	0.50	Weather—clear and very hot. Reaping of <i>beali</i> continues. <i>Sarad</i> crop on unirrigated lands urgently requires rain. Price of rice rising; common rice sells at 11 seers per rupee in the town, and from 17 to 18 seers in the interior. Public health generally good.
	39 Pooree, " 10 "	1.72	Weather—hot and cloudy. Weeding and transplanting of <i>sarad</i> going on. More rain wanted for crops on high lands. <i>Beali</i> being harvested. Miscellaneous crops doing well. <i>Sarad</i> paddy in the Chilka tracts withering from drought. Common rice is selling at an average of 17 seers 15 chittacks per rupee in the Sudder sub-division, and 17 seers 11 chittacks in the Khoorda sub-division. Cases of cholera still reported from the interior of the district.
	Khoorda " ...	0.63	
	40 Balasore " 11 "	0.78	
Weather—hot and cloudy. Prospects of crops continue favourable. Transplanting still continues at places. Public health generally good.			
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Sept. 11 '85	5.38	Weather—heavy rain the first three days, latterly bright and clear. The break of the last three days is proving of great benefit. <i>Bhadai</i> is being harvested with outturn a little below the average. Rice crops continue to promise well. Cholera still very prevalent in certain thanas, and fever and cases of small pox reported from a few villages.
42	Lohardugga, " 12 "	0.18	Weather—hot and dry for the season. Prospects good, but the rice on higher stretches wants rain. <i>Gora dhan</i> being reaped. Prices falling on the whole. Much damage reported from western part of Palamow from overflowing of the Sone. Cholera still prevalent in Ranchi, Mandar, and Lohardugga thanas.
43	Singbhoom, " 11 "	0.05	Weather—seasonable. Bright weather during the week has done great good to all crops. <i>Gora dhan</i> , <i>makai</i> , and <i>goonulli</i> are being reaped with fair results. Prices steady. General health good.
44	Manbhoom, " 12 "	0.51	Weather—fine and favourable for crops. All crops doing well. Prices falling, and public health good.
	Goviappore ...	0.72

ALEXANDER PEDLER,
Offg. Meteorological Reporter to the Govt. of Bengal.

METEOROLOGICAL AND RAINFALL SUMMARY OF THE PROVINCE OF BENGAL FOR THE MONTH OF AUGUST 1885.

THE normal meteorological conditions in Bengal during August resemble those of July to a very great extent, and the month is therefore nearly as important as July from a meteorological point of view. The south-west monsoon winds continue to blow over the Province with almost undiminished force during the greater part of August, though towards the end of the month, or commencement of September, wind velocities begin to fall off. The normal rainfall in August is distinctly, though slightly, smaller than in July, and this would tend to show that the monsoon current even in August commences to weaken. The greater part of the rainfall in Bengal in August is undoubtedly brought up by the Bay of Bengal current, but a considerable part of the rainfall at the western stations of the Province is also due to the Bombay branch of the current, which, interacting in these districts with the Bengal branch, causes ascensional air motion, and consequently increased precipitation of rain. The Bay of Bengal branch alone gives the heaviest rainfall to the southern, eastern and northern districts, but the interaction just mentioned increases the rainfall in the western districts, and thus supplements the action of the Bengal current, and tends to produce greater uniformity of rainfall over the whole Province.

The actual amount of rainfall in August will no doubt depend mainly on the strength and volume of the Bay of Bengal monsoon current, the heaviest rainfalls usually occurring in the eastern and northern districts, and the amount slowly diminishing towards the western districts, but the actual distribution will be affected by the causes which have been discussed in the previous monthly summaries. One of the causes which will produce marked variations from the normal distribution of rainfall will be the formation and passage of areas of barometric depression or small cyclonic storms, which bring large amounts of rain to the districts through which they pass. The formation of such storms is a prominent characteristic of many rainy seasons, though they are to a certain extent absent in others: and as the line of country through which they pass varies very considerably, they are prominent causes in modifying the distribution of rain in particular years. A second cause which modifies the normal distribution of the rainfall is the varying strengths of the two currents, and the amount and position of their interaction, and it will be seen that if from any cause a larger amount of interaction than usual takes place over the western districts of the Province, the rainfall will be increased by a corresponding amount.

The normal distribution of rainfall during the month is comparatively simple. The two localities in which rainfall is heaviest, and where the amount exceeds 20 inches, include, first, the Chittagong, Noakholly, and Backergunge districts; and second, the Julpigoree, Cooch Behar, and Darjeeling districts. The area which receives a rainfall of between 20 and 15 inches starts from Saugor Island and runs nearly parallel to the sea coast, then turns to the north, runs parallel to the Tipperah and Sylhet hills, and through the centre of the Rungpore district to Kissengunge in the Purneah district. The greater part of Chutia Nagour, and of South-West, Central, East and North Bengal, receives a rainfall of from 12 to 15 inches, while the greater part of Behar receives only from 10 to 12 inches. The central districts of Behar receive the smallest amounts of rain, the average being generally rather less than 10 inches.

Meteorology of the month.—Generally speaking, the month of August has been characterised by exceptionally heavy and in some cases excessive rainfall over a large part of the Province. In South-West Bengal, South Behar, and Chutia Nagpur, the rainfall has been very much larger than the normal, and in East Bengal, North Behar and Orissa the rainfall has been nearly normal, while North Bengal shows rather a decided defect.

At the close of the previous month a small cyclonic storm had passed away from Bengal into the North-West Provinces, and with its advance a light monsoon had set in over the Province. For the first two days of the present month pressure fell generally in Bengal, and a slight barometric depression was formed over Central Bengal, which on the 3rd instant commenced to travel in a westerly direction and became absorbed in the comparatively low pressure area which generally exists at this season of the year in the western districts. The small depression was attended with the usual cyclonic circulation of winds, and during its existence in Central Bengal, with its westerly movement, it brought moderate to heavy rain to many of the districts in Central and South-West Bengal, and also to Chutia Nagpur and parts of South Bengal and Orissa, but in East and North Bengal and North Behar the rainfall was decidedly lighter. Immediately after the disappearance of the first depression, a second area of low pressure commenced to form over Central Bengal, which was attended by the usual cyclonic circulation of winds. It moved in a westerly direction, and on the morning of the 5th its centre was not far from Burdwan, and on the 6th it had moved to Chutia Nagpur not far from Hazaribagh, while on the 7th the small storm was distinctly perceptible in the neighbourhood of Gya, though it was evidently growing more feeble and was rapidly breaking up. This storm was decidedly larger and more influential than the previous one, and it was fed by rather strong moist southerly winds, and it therefore gave rise to very heavy rain in the districts affected by it, while at the same time it brought lighter rain to the other districts of the Province. With the advance of this small storm, a fairly strong monsoon current set in from the Bay of Bengal, and on the 7th practically all stations in the Province were influenced by the

Bombay current took place, and a westerly wind blew over the greater part of the Province, necessarily causing a considerable amount of interaction between the two branches of the monsoon, and this was immediately followed by heavy rain, the rainfall being particularly heavy in Behar and North Bengal. This action between the two opposing wind currents set up a slight circulation of winds in Central Bengal, and as this was accompanied by a falling pressure, a small but distinct barometric depression was formed on the 9th, the centre of which was apparently between Calcutta and Jessore, and round which there was a decided cyclonic circulation of winds, though the wind velocities were feeble. The depression was, however, an insignificant one, and it rapidly disappeared, while another small depression was formed in the north-west angle of the Bay, the centre being on the 10th apparently between Balasore and False Point. The depression moved in a westerly direction, and on the following day it was near Cuttack, and on the 12th it had disappeared. On the 13th a small depression appeared off the South Orissa coast with its centre near Gopalpore, and this advanced in a north-westerly direction crossing the coast, and on the 14th it was near Cuttack; on the following day it had advanced further inland towards Chutia Nagpur and had disappeared.

On the 16th a rapid fall of pressure took place in the north-west angle of the Bay, and a small cyclonic storm was formed. It was, however, formed too close to the land for it to have time to gather strength, and it was decidedly a feeble storm, though it gave rise to a rough sea and strong winds at the Sandheads. On the morning of the 17th it had moved in a north-westerly direction and was in the South of Chutia Nagpur, and on the 18th it had disappeared. The depression of course carried with it moderate to heavy rain, and as it advanced a fresh rush of southerly moist winds flowed over the Province. About this time another advance of the Bombay current took place, and the two branches of the monsoon current commenced to interact, and on the 19th rather heavy rainfall occurred in the western and south-western districts. On this date the lowest pressure in the Province was in the western part of South Behar, and round the low pressure area the opposing winds commenced to circulate slowly. The westerly winds having strengthened, the low pressure area with its circulation of winds moved in an easterly direction into North Bengal, and on the 21st the depression, which was near Maldah, became exceedingly feeble and disappeared. On the 22nd, with a very rapid fall of the barometer which took place in South-East Bengal, a new barometric depression was formed in this district with its centre near Dacca. The fall in this district was very rapid, and at Jessore, Chittagong and Comilla the decrease exceeded a tenth of an inch. There was on this day a very decided convergence of the winds towards the area of low pressure in East Bengal, and with the heavy rainfall which occurred in this district at the same time, the small cyclonic storm became decidedly more intense, and commenced to move in a westerly direction, giving particularly heavy rain in its path. At the same time, at the westerly stations of the Province, westerly winds were blowing, and at the northern stations easterly winds were reported, so that a considerable amount of interaction was taking place, which caused heavy rainfall. The depression moved in a westerly direction, and on the 23rd its centre was between Jessore and Calcutta, and it was giving on this day exceptionally heavy rain to the districts through which it was passing. On the 24th the small storm had advanced into the south of Chutia Nagpur, and its centre was apparently almost due south of Hazaribagh, though it was clear that the storm was becoming more feeble, and on the 25th it had moved to the north-east corner of Chutia Nagpur, and it was then extremely feeble and was evidently rapidly breaking up. The formation and advance of this storm were the main features in the meteorology of the last ten days of the month. Round the small storm there was the usual well marked cyclonic circulation of winds, and with the advance of the storm into the interior, strong south-easterly and easterly winds set in over the Province. The storm was only of small intensity with regard to the wind velocities which accompanied it, but with regard to the rainfall it brought, it was of considerable importance, particularly during the first two or three days of its existence, as will be seen from the following record of rainfall of stations affected by it; thus on the 21st Kutubdia (Chittagong district) reported 7.18 inches of rain, Cox's Bazar 4.14 inches, Fenny 4.85 inches and Chandpore 5.12 inches. On the 22nd, Jehanabad in the Hooghly district received 12.50 inches of rain, Chittagong 4.58 inches, Kutubdia 5.42 inches, Satkhira 4.12 inches, Hooghly 4.56 inches, Goalundo 5.50 inches, and Furreedpore 4.15 inches. On the 23rd, Bongong (in the Jessore district) reported 10.31 inches, Raipur (Bankoora district) 7.57 inches, Anda (Bankoora district) 7.38 inches, Khatra (Bankoora district) 7.10 inches, Bankoora 10.33 inches, Bishenpore 5.50 inches, Banaghat 4.73 inches, Moheareks (Howrah district) 6.39 inches, Calcutta 7.84 inches, Dum-Dum 4.90 inches, Garbeta (Midnapore district) 5.34 inches, Midnapur 8.64 inches, and Tumlook (Midnapur district) 8.15 inches.

The small storm had ceased to have any marked effect on the meteorology of the Province on the 25th instant, and on the following day pressure was falling in East and North Bengal, while in other districts it was rising. There appeared on this day to be a distinct tendency to again form a low pressure area in South Bengal. On this day, too, with the complete disappearance of the first depression from Behar, a westerly wind current set in at the western stations, producing decided interaction with the easterly and south-easterly winds previously blowing, and heavy rain was again reported from the western stations in Behar, Chutia Nagpur and in South-West Bengal. The tendency to the formation of a barometric depression in South Bengal became much more marked on the 27th, and a small and feeble depression was distinctly formed over the Sunderbans to the south-east of Calcutta, which was attended by the usual cyclonic circulation of winds. On the

28th the depression had rather increased in area, though it had not intensified to any material extent, and it was moving in a northerly or north-westerly direction, the lowest pressure being reported from Calcutta, and the depression being apparently only a short distance to the south-east of this station. The small depression remained almost stationary on the 29th, but on the morning of the 30th it had moved in a northerly direction and was in Central Bengal, the centre of the disturbance being to the north of Krishnagore, while on the 31st it had moved in a north-westerly direction, and it was over the central parts of South Behar, the centre being apparently between Gya and Bhagulpur. This storm also, during its formation and advance, brought up moderate to heavy rain to the southern, central and south-western districts of Bengal.

Barometric depressions during the month.—It will thus be seen that Bengal has been subject to the action of no less than nine barometric depressions during the month, most of which were of a very feeble character; of these, three were formed in Central Bengal and moved towards Chutia Nagpur and South Behar; two were formed in South and South-East Bengal, and passed in a westerly and north-westerly direction through South-West Bengal into Chutia Nagpur; two were formed in the north-west angle of the Bay and passed through West Bengal into Chutia Nagpur; one was formed off the South Orissa coast and passed through Orissa into Chutia Nagpur, and the ninth was an extremely feeble depression which was present in South Behar and North Bengal, and disappeared near Maldah. As usual these depressions have brought heavy rain, and it is therefore clear that South-West Bengal, South Behar, and Chutia Nagpur will have received very large amounts of rain, while East Bengal, North Behar and Orissa will have received moderate amounts of rain, while North Bengal has received comparatively small amounts of rain.

Pressure.—Was during the month of July very nearly equal to the normal, the average variation for the whole Province being a defect of only 0.008", but with the constant succession of barometric depressions which has occurred in Bengal during August, the average pressure for the month has fallen very decidedly below the normal, and the variation for August has become a defect of rather less than 0.04". The variations during the month have been of the usual oscillatory character, but these have to a great extent been masked by the changes accompanying the formation and advance of the various depressions. In the first week the changes of pressure were not very large, and the average defect was about 0.007", but the distribution of pressure was unequal; and while Gya and Berhampore showed defects of 0.03", in East Bengal pressure was normal, and in Orissa there was an excess of 0.03". During the second week pressure fell rather rapidly, and the average defect became 0.04", and while in Orissa the defect had increased to 0.07", in South-West Bengal it was 0.05", and in East Bengal, South Behar and Chutia Nagpur the defect was 0.03", while in North Behar pressure was normal. In the third week the average defect was 0.03" and the distribution had become very even, but in the fourth week the defect over the Province had increased to 0.08", and the defect was most marked in the southern and central districts, where at Calcutta it was 0.12", at Jessore 0.11" and at Berhampore 0.1". The average defect for the month has thus been about 0.03" to 0.04". The largest average defect during the month, as might be expected, has been in South-West Bengal where it equals 0.06"; in South Behar it has been 0.04", in Chutia Nagpur, East Bengal and Orissa about 0.03", while in North Behar it has been only 0.01".

Temperature.—The variations of temperature during the month have again been of little importance. During the previous month the average temperature of the Province was very nearly normal, and for the first two weeks of the present month the changes were of the usual oscillatory character, and the average temperature was scarcely altered. With the occurrence of the exceptionally heavy rain in the third and fourth weeks of the month, temperature generally fell and the average temperature of the Province for the fourth week in the month was 2° in defect. For the whole month of August the average temperature of the Province has been rather less than 1° in defect, the areas of greatest defect being South Behar, Chutia Nagpur and South-West Bengal; in North Behar temperature has been, if anything, slightly in excess.

Winds.—The rainfall for the month having been extremely heavy over a large part of the Province, it might perhaps be expected that the strength of the monsoon current, as measured by the wind velocities at the head of the Bay would have been proportionately large; but this scarcely seems to have been the case. Thus the average daily wind velocity at False Point during August has been about 245 miles against the normal velocity of about 215 miles; at Cuttack the actual daily movement of wind has been 62 miles against the normal movement of 66 miles. At Saugor Island the daily movement in August has been about 345 miles against the normal of about 270 miles; at Jessore the actual daily velocity has been 106 miles against the normal 98 miles; at Dacca the velocity per day has been 125 miles against the normal velocity of 152 miles; and at Chittagong the mean daily movement registered has been 144 miles instead of the normal movement of 145 miles. It would therefore appear that at the western stations, on or near the coast, the wind velocity or the strength of the monsoon has been a little greater than usual during August; while at the eastern stations the velocity has been a little lower than usual. These small differences, however, will scarcely account for the largely increased rainfall which has been received.

Rainfall.—The meteorological conditions on which the excessive amount and the distribution of the rainfall during the month have depended have already been discussed in the Meteorological Summary above, and its distribution as to time and place have also been

indicated. Owing to the almost constant succession of small depressions, each bringing with it moderate and in some cases heavy rainfall, it will be seen that there have been no breaks in the rains of any practical importance. In some districts there have been of course periods of two or three days during which rainfall became light and local, and the districts in which these have occurred have been principally Behar and North Bengal. Thus in North Bengal and North Behar the period from the 1st to the 4th was comparatively rainless, and again in Behar generally from the 12th to the 15th rainfall was scanty, but with these exceptions rainfall has been tolerably continuous in all districts throughout the month. The extreme frequency of the rainy days is perhaps best shown by stating that in South-West Bengal and Chutia Nagpur the rainy days have averaged nearly 25 during August, or about 5 in excess of the normal number. In Orissa, East Bengal, North Bengal and South Behar the number of rainy days has averaged from 20 to about 23; while in North Behar, where the number of rainy days has been the smallest in any district, rain has been received on 17 days.

The lines of equal rainfall during August, very roughly speaking, run diagonally across the Province, starting from the south-eastern districts running to the north-western districts. There are the usual lines of heavy rainfall in the Darjeeling Hills, where there are some stations which have received 25 inches of rain and upwards; the rainfall, however, rapidly diminishes, and a rather large district, starting from Tipperah including the Mymensingh, part of the Pubna, Bogra, Dinagepore, Purneah, Bhagulpore and Durbhunga districts, has received less than 10 inches, the rainfall being less than 6 inches at such stations as Brahmunbariah, Kishoregunge, Netrokona, Jamalpore and Gyabanda. To the south-east of this line the rainfall again steadily increases till the central and southern parts of the Province are reached, where the rainfall has been almost uniformly in excess of twenty inches, while there is also a large area where the rainfall has been more than 30 inches, the latter area including the greater part of the Midnapore district. Further to the east and south-east again the rainfall decreases, and the greater part of Chutia Nagpur has received a rainfall of from 15 to 20 inches. In the southern part of East Bengal the rainfall rapidly increases, until at Cox's Bazar the very large amount of 63·46 inches was registered.

When the actual is compared with the normal fall, it appears that the whole of the northern and north-eastern districts have received a defective rainfall, while almost the whole of the remainder of the Province has received a fall largely in excess. The line separating the area in defect from that in excess starts from the northern part of the Chittagong Hill Tracts, runs to the south of Fenny and Munshigunge, to the north of Serajgunge, and then between the Rajshahye and Dinagepore districts, then to the south of the Purneah, Bhagulpore and Durbhunga districts, and then passes through Mozufferpore and to the north of Chumparun. A large area of the central parts of the Province has received more than 10 inches of excess rainfall. This area stretches from Patuakhally in East Bengal to Contai in the Midnapore district, and the band of excess rainfall runs in a north-westerly direction, gradually narrowing in its advance till it finally reaches Buxar in South Behar. On either side of this area of large excess, the amount of excess gradually diminishes, reaching the area in defect in North Bengal on the one side, and on the other side reaching an area in defect in Orissa. In some cases the amount of excess rainfall at stations has been extraordinarily large; thus at Cox's Bazar a rainfall of no less than 36·7 inches in excess of the normal was recorded. At Jehanabad in the Hooghly district the excess amounted to 32·2 inches; at Tumlook in the Midnapore district the excess was 22·5 inches; at Ghatal, also in the Midnapore district, the excess was 22·1 inches; at Contai, also in the same district, 19·5 inches, and finally at Midnapore itself the excess rainfall for the month was 18·4 inches. It will thus be seen that the Midnapore district in particular has suffered from an enormous excess of rainfall during the month.

Taking up the meteorological districts in detail, South-West Bengal, for the first two weeks of the month, received rather more than the normal amount of rain; but in the second and particularly in the third week of the month the rainfall was very largely in excess, and for the whole month the average amount received was 23·66 inches against the normal amount of 12·22 inches. The excess fall in this district has therefore amounted to 85 per cent. of the normal. South Behar has been receiving an excess rainfall throughout the month, and this district reports 17·55 inches against the normal 10·91 inches, and the excess is therefore equal to 61 per cent. of the normal. In Chutia Nagpur rainfall was in excess of the normal in the first, third and fourth weeks of the month; while in the second week there was a very decidedly defective fall. For the month, the rainfall in this district has been 19·55 inches against the normal 12·89 inches, and the excess has therefore been 52 per cent. of the normal. In East Bengal the rainfall was again deficient in the second week of the month, while it was in excess for the remainder of the month. This district averaged 18·4 inches of rain against 15·72 inches, and has shown an excess of 16 per cent. above the normal. In North Behar the rainfall was fairly uniformly distributed, and it received 11·75 inches against 11·04 inches, and was thus only 6 per cent. in excess. In Orissa the rainfall was in excess in the third week only, and the average amount reported for the month was 11·72 inches against the normal 11·65 inches, which is practically a normal fall. The only district in which the rainfall was in considerable defect was North Bengal, and this has received 10·47 inches against 14·67 inches, the defect has here been equal to 29 per cent. of the normal. Taking the meteorological divisions as being of equal value, during the month of August the rainfall for the whole Province was 29 per cent. in excess of the normal amount for the same period.

The excessively heavy falls at the various stations, both for the whole month and for isolated days, have been so extremely numerous that it is impossible to attempt to sum-

merate them; and a few of the exceptionally heavy rainfalls in districts only can be indicated. In the 24-Pergunnahs district the rainfall was 28·04 inches against the normal 12·28 inches. In the Midnapore district it was 35·27 inches against the normal 12·73 inches. In the districts represented by Saugor Island it was 29·23 inches against 14·03 inches. In the Bankoora district it was 27·11 inches against 12·23 inches; and in the Burdwan district 19·48 inches against 11·93 inches. In the Beerbhoom district the rainfall was 20·31 inches against 12·83 inches. In the Hazaribagh district it was 23·34 inches against 12·53 inches, and in the Singbhoom district it was 20·58 inches against 13·92 inches. Finally, in the Chittagong district the rainfall was 42·58 inches against the normal amount of 21·62 inches.

The following table gives full data for the comparison of the actual and the normal rainfall of the month of August in all districts of the Province. The figures are derived from the average and actual rainfall of the rain-recording stations in each district, due allowance or weight being made for the area which each station represents. This gives a more accurate average than the arithmetical means given in the weekly and monthly meteorological tables. The first column gives the normal or average district rainfall as determined from the rainfall observations of the past 15 years. The second column gives the actual district rainfall as determined from the weighted actual rainfalls of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third column in a slightly different form. It states as a percentage how much the district rainfall of the month varied in excess or defect from the normal rainfall, and is hence the difference between the numbers in the third column and 100.

CALCUTTA, the 14th September 1885

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 11TH OF SEPTEMBER 1885.

At the close of the previous week two slight barometric depressions existed, one having its centre to the east of Calcutta, while the centre of the second was to the south-west of Bhagulpore. The southern depression advanced in a northerly direction during the Friday night, and on the morning of Saturday, the 5th, it had become absorbed in the low pressure area which existed near Bhagulpore. There was also on this day a distinct and rather broad band of low pressure stretching in a north-westerly direction across the Province, the southern limit of the band being at Burrisal while the northern limit included the station of Purneah. Pressure on this day was largely below the normal, particularly in the districts affected by the low pressure, and at Bhagulpore the defect from the normal was 0.15". The wind system of the Province was of course materially influenced by these conditions, and round the area of low pressure winds circulated cyclonically, the wind directions at almost all the stations in the Province being affected in this way. Wind velocities were generally light, though with the advance of the depression rather strong winds set in at the southern and western stations. These conditions of course brought moderate to heavy rain to almost all parts of the Province.

The area of low pressure which thus occupied almost the whole of North Bengal and surrounding districts continued practically unaltered for the next four days, on some days slightly intensifying and on others slightly decreasing in intensity, and with its continued existence the wind circulation was unaltered, and thus conditions remained favourable for the production of heavy rainfall over the central, eastern and northern parts of the Province, while at the western stations, and particularly in Orissa and Chutia Nagpur, the rainfall gradually commenced to decrease and became light and local. On the 10th and on the 11th pressure commenced to rise rapidly over the whole Province, the rise being particularly rapid at the northern and eastern stations, and thus the area of low pressure in North Bengal was filled up, and the lowest pressure in the Province was transferred to the western and northern parts of Behar. With the disappearance of the depression the cyclonic circulation of winds also ceased, and the monsoon winds became light and feeble, and were to a certain extent driven back by a westerly current which brought with it fine weather to almost all districts. At the close of the week there was every appearance that a very distinct break in the rains would become established, and weather in most districts was clearing, and in the western districts it was fine with passing clouds, though of course there were still local showers, and in some cases of considerable amounts, particularly in the eastern and southern districts and at some of the northern stations.

The changes of pressure have been rather marked during the week. On the 5th pressure fell rapidly at the eastern and northern stations, while it rose at the western and southern stations. These changes were of course connected with the advance of the area of low pressure above noticed. For the following four days the variations were small, and pressure was generally below the normal in the eastern and northern districts, while on the last day of the week pressure rose rapidly, the previous defect was filled up, and the average pressure over the Province became about 0.08" above the normal, while at Durbhunga the excess was equal to 0.12". The average variation of pressure for the whole Province for the week has been a defect of 0.015", while the distribution has been a little unequal, and thus Chutia Nagpur and Orissa show generally an excess of 0.01", while East Bengal and probably North Bengal show a defect of at least 0.05".

The changes of temperature during the week have been rather larger than has been the case during the past few weeks, and while for the first four or five days of the week in the central, eastern and northern districts, owing to the heavy rainfall, temperature continued very low, during the last two days of the week, when the rainfall began to diminish in quantity, temperature rose rather rapidly in several districts. In the western districts the rise of temperature set in earlier, for the rainfall diminished in these districts from the earlier part of the week. For the whole week temperature over the Province has been 1° in defect, the greatest variations from the normal being in North Behar, where there has been a defect of 2.6°, while on the other hand Orissa shows an excess temperature of 2.0°.

Rainfall, as has previously been stated, has been abundant in the central, northern, eastern and southern districts during the week, and all districts, except Orissa and Chutia Nagpur, have again received an excess rainfall. In these two districts, and in Orissa in particular, the rainfall has been very scanty, and the number of rainy days in these districts has been small. Thus in Orissa the average rainfall for the week has been 0.41 inch instead of the normal fall of 2.66 inches, and this district has thus been in defect by 85 per cent. of the normal quantity. Chutia Nagpur has received 1.90 inches against the normal fall of 2.53 inches, and is therefore 25 per cent. in defect. On the other hand North Bengal has received an average fall of 3.26 inches against the normal fall of 2.81 inches, and the excess fall has therefore been 16 per cent. South-West Bengal has received 3.67 inches of rain, while the normal for the week is 2.44 inches, and the excess is therefore 50 per cent of the normal. North Behar reports 3.64 inches against the normal 2.00 inches, and is thus 82 per cent in excess. East Bengal has received an average fall of 7.14 inches, while the normal is 2.87 inches, the excess is therefore 1.49 per cent., and finally South Behar reports 4.73 inches against the normal 2.00 inches, and has received an excess fall of 137 per cent.

The extremely heavy rainfall in certain parts of the Province can also be seen by taking the rainfall in smaller districts than those given above. Thus the Nuddea district has received an average fall for the week of 6.75 inches, while the normal fall is only 2.06 inches, while Kishnagore itself recorded no less than 10.37 inches. The Moorshedabad district has received 5.19 inches against the normal 2.52 inches, while Jungipore in this district received 7.35 inches. The Bogra district reported 4.62 inches against the normal 1.79 inches, while Sherpore in this district has received 6.24 inches. The Rajshahye district has received 6.19 inches against the normal 2.83 inches, while Nattore, Lalpore and Manda received between 7 and 8 inches each. The Purneah and North Bhagulpore district received 4.92 inches against the normal 2.73 inches, while Purneah, Muddapore and Soolpool received from 6 to 8 inches. The Durbhanga district has also received 6.21 inches against the normal 2.22 inches, and the Bhagulpore district 8.19 inches against 1.96 inches, while Bhagulpore itself received 13.95 inches of rain. Again the Sonthal Pergunnahs received 5.76 inches against the normal 2.57 inches, and in this district Godda reported 14.39 inches.

There have also been some extremely heavy falls on particular days during the past week. Thus on the 5th Indas (Bankoora district) received 3.45 inches, Beerbhoom 4.40 inches, Nowada (Gya district) 4.05 inches, Shergati (Gya district) 5.43 inches, Begoosera (Monghyr district) 4.13 inches, Jamui (Monghyr district) 5.25 inches, and Sheikpura (also in the Monghyr district) 7.63 inches. On the 6th the following stations received amounts in excess of 4 inches:—In the Moorshedabad district Azimgunge, Jungipore and Lalgola; and in North Bengal Sibgunge and Lalpore; in South Behar Banka, Goda and Simra. On the 7th Chuadanga reported 4.10 inches, Brahmunbariah (Tipperah district) 7.12 inches, Ramchandrapore (also in the Tipperah district) 12.5 inches, Mymensingh 6.87 inches and Bhagulpore 4.66 inches. On the 8th Ramchandrapore reported 9.6 inches and Kishoregunge (Mymensingh district) 6.67 inches, while for the remainder of the week the rainfalls became very much lighter and rather more local.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 11th of September 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1885.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure of the seven days 29·685
The average pressure of the corresponding period for 24 years, S. G.'s Office ... 29·562

The total number of hours of bright sunshine 27·4
The maximum possible number of hours of sunshine 86·6

The mean temperature of the seven days 82·4
The average temperature of the corresponding period for 24 years, S. G.'s Office ... 83·2
The extreme variation of temperature 16·8
The maximum temperature 90·0

The highest velocity of the wind in one hour 17

The highest pressure of wind on one square foot 2

The mean relative humidity 85
The average relative humidity of the corresponding period for 24 years, S. G.'s Office ... 86

The total fall of rain from 6th to 12th September 1885 1·12
The average fall of the corresponding period for 24 years, S. G.'s Office ... 3·03
The total fall from 1st January to 12th September 1885 57·62
The average fall of the corresponding period for 24 years, S. G.'s Office ... 53·14

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 85 formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder.

ALEXANDER FIEDLER.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 13th September 1885.

For Meteorological Reporter to the Government of India,

The extremely heavy rainfall in certain parts of the Province can also be seen by taking the rainfall in smaller districts than those given above. Thus the Nuddea district has received an average fall for the week of 6.75 inches, while the normal fall is only 2.06 inches, while Kishnagore itself recorded no less than 10.37 inches. The Moorsheadabad district has received 5.19 inches against the normal 2.52 inches, while Jungipore in this district received 7.35 inches. The Bogra district reported 4.62 inches against the normal 1.79 inches, while Sherpore in this district has received 6.24 inches. The Rajshahye district has received 6.19 inches against the normal 2.83 inches, while Nattore, Lalpore and Manda received between 7 and 8 inches each. The Purneah and North Bhagulpore district received 4.92 inches against the normal 2.73 inches, while Purneah, Muddapore and Soopool received from 6 to 8 inches. The Durbhanga district has also received 6.21 inches against the normal 2.22 inches, and the Bhagulpore district 8.19 inches against 1.96 inches, while Bhagulpore itself received 13.95 inches of rain. Again the Sonthal Pergunnahs received 5.76 inches against the normal 2.57 inches, and in this district Godda reported 14.39 inches.

There have also been some extremely heavy falls on particular days during the past week. Thus on the 5th Indas (Bankoora district) received 3.45 inches, Beerbhoom 4.40 inches, Nowada (Gya district) 4.05 inches, Shergati (Gya district) 5.43 inches, Begooerai (Monghyr district) 4.13 inches, Jamui (Monghyr district) 5.25 inches, and Sheikpura (also in the Monghyr district) 7.63 inches. On the 6th the following stations received amounts in excess of 4 inches:—In the Moorsheadabad district Azimgunge, Jungipore and Lalpore; and in North Bengal Sibgunge and Lalpore; in South Behar Banka, Goda and Simra. On the 7th Chuadanga reported 4.10 inches, Brahmunbariah (Tipperah district) 7.12 inches, Ramchandrapore (also in the Tipperah district) 12.5 inches, Mymensingh 6.87 inches and Bhagulpore 4.66 inches. On the 8th Ramchandrapore reported 9.6 inches and Kishoregunge (Mymensingh district) 6.67 inches, while for the remainder of the week the rainfalls became very much lighter and rather more local.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the Province for the week ending Friday, the 11th of September 1885:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.							RAINFALL.

[illegible]

A special census of the Europeans in the Darfeling Municipality was recently taken as the census of this section of the community, taken in February 1891, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives as before, as it was not necessary to re-census them. The ratios have consequently on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans was not taken on the basis of chronological age, but having been recorded under their head and having been enumerated under their name, the authorized form of non-chronological form of age was adopted.

N. B.—This Canal was opened for traffic on the 15th July 1885.

The 15th September 1885.

D. B. HOAR,
Under-Secy. to the Govt. of Bengal.

General Remarks on the fluctuation of principal staples carried on the East Indian Railway during the month ended 25th July 1885.

INCREASES.

Wheat.—The increase in this staple was due to a demand in Calcutta for export.

Salt.—The outturn at the Sambhar lakes being small, Liverpool salt was sent from Howrah to up-country stations.

Other grains.—This increase may be attributed to better crops attended with improved local demand.

Railway Materials, Foreign.—The construction of the Cawnpore-Kalpi and Bilaspur-Katui Railways, and the Benares bridge, accounts for the increase in this material.

Lao.—Although the prices in the Calcutta market were high, and business irregular, there was a slight increase in this commodity.

Sugar.—The increase in this staple is accounted for by a better demand in Rajputana and Central India.

DECREASES.

Coal.—There was an increase in the upward traffic during the month, but there was a heavy falling off in the downwards traffic resulting in a net decrease in this staple.

Cotton.—Want of demand for export may be assigned as the cause of a slight decrease in this article of commerce.

Piece-goods.—A small decrease under this head may be attributed to dull markets.

Rice (husked and unhusked).—Deficient rainfall last season accounts for the decrease in this commodity.

Seeds.—The falling off in this staple may be attributed to ordinary fluctuation of trade combined with shorter distance traffic.

N. ST. L. CARTER, Traffic Manager.

TRAFFIC MANAGER'S OFFICE, JAMALPUR, the 10th September 1885.

Weekly Return of Traffic Receipts on Indian Railways.

EAST INDIAN RAILWAY.

RESOLUTION ON THE REPORT OF THE ROYAL BOTANIC GARDENS FOR 1884-85.

MUNICIPAL DEPARTMENT—MEDICAL.

Darjeeling, the 11th September 1885.

RESOLUTION.

READ—

THE Annual Report on the Royal Botanic Gardens, Calcutta, for the year 1884-85.

THE unusual mildness of the last cold season exerted a favourable influence on the more delicate plants cultivated in the conservatories, while the show of orchids was the most magnificent that has been seen for many years. A large number of the numerous trees planted during the past few years have grown well, and the garden now presents a fine park-like appearance, for which the public of Calcutta, no less than the Government, are indebted to Dr. King.

2. The cultivation of several economic plants engaged the attention of the Superintendent during the year. A fresh attempt was made to introduce the plantain (*Musa textilis*), from which Manilla hemp is derived; but, as on previous occasions, the cold weather proved fatal to every plant of this species. Of the *Rhea* plant, both stems and roots were distributed among persons interested in discovering a proper method of extracting the fibre. Another fibre, which has lately attracted considerable attention, is bow-string hemp, the product of the plant *Sansevieria Zeylanica*. Although not indigenous, the

tree grows well in Bengal, and the fibre is said to be admirable, while it is easy of extraction from the plant. Dr. King reports as follows on the Japan paper mulberry—

“ In several of my recent reports I have referred to the Japan paper mulberry as a hopeful source of paper fibre for Bengal. I am happy to say that the trees of this species in the garden continue to grow well. Although now only three years old, they are twenty-five feet high, and have proportionately thick stems. The fibre contained in the bark is one of the best materials for paper known. It is easily separated, is strong, and requires little bleaching. As the tree grows thoroughly well and coppices freely, I think it quite possible that, in the course of time, natives may be induced to grow it on the odd corners of land which are so common near Bengali villages.”

The *Sabai* grass, the suitability of which as a raw material for paper has been established beyond doubt, is now largely used in local manufacture. Attention has lately been given to an important alkaloid, called cocaine, which is extracted from the leaves of the cocoa plant; and this plant is now being propagated to a large extent for distribution.

3. There have been considerable additions to the collection of dried plants, the contributors being Sir J. D. Hooker, Mr. Kunstler, Mr. Gamble, Mr. Duthie, Mr. Talbot, Dr. Cooke, and several others. The interchange of seeds and plants went on actively during the year, the issues amounting to 23,433 living plants, and 2,979 packets of seeds; and the receipts to 12,056 living plants, and 1,201 packets of seeds. The receipts from sale of surplus plants amounted to Rs. 1,075-11-6.

4. The *Lloyd Botanical Gardens, Darjeeling*, which had suffered severely in recent years from the depredations of cockchafer grubs, were comparatively free from this pest during the year under review. The grub has gradually disappeared, and the garden has once more been stocked with varieties of plants. It is to be hoped that the grub, which is said to be extending its ravages in the Darjeeling district, will display no partiality for tea. Dr. King states that there is some possibility of the site of the old municipal vegetable garden, situated between the Eden Sanitarium and the Botanical Gardens, being used either for dhobies' huts or washing tanks. The Lieutenant-Governor considers that this would be most undesirable, and trusts that Dr. King may be able to make some arrangement with the Municipal Commissioners to prevent it. A special report on the subject should be submitted.

5. The thanks of the Lieutenant-Governor are again due to Dr. King and his subordinates for the excellent work done during the year. For the first seven months of the year Dr. King was on furlough, and his duties were carried on by Mr. Brace, the Curator of the Herbarium.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE REPORT OF THE CALCUTTA MEDICAL INSTITUTIONS FOR 1884.

MUNICIPAL DEPARTMENT—MEDICAL.

Darje-ling, the 19th September 1885.

RESOLUTION.

READ—

The Report on the Calcutta Medical Institutions for the year 1884.

Read also—

The Report for the year 1883, and the Resolution recorded upon it.

The year under report was a very unhealthy one, cholera and small-pox having prevailed within the town of Calcutta with more than usual severity. The following statement, which is furnished by the Inspector-General of Civil Hospitals, shows the mortality from the most prevalent diseases in the town for the past ten years:—

	Cholera.	Diarrhoea and dysentery.	Fevers.	Small-pox.	Other causes.	Total.	Ratio per mille of population.
1875	1,074	1,579	5,328	720	4,785	13,486	32.7
1876	1,851	1,864	4,361	71	4,817	12,964	30.1
1877	1,418	1,083	5,151	67	5,385	13,704	31.9
1878	1,338	2,010	6,086	1,405	5,407	15,846	38.1
1879	1,186	1,516	4,796	772	4,774	13,044	30.3
1880	805	1,267	3,797	114	5,608	11,681	27.1
1881	1,693	1,491	3,765	133	5,918	13,080	30.
1882	2,240	1,454	3,618	17	5,819	13,177	30.4
1883	2,037	1,307	3,442	73	5,460	12,326	28.4
1884	2,272	1,209	3,618	478	5,079	13,256	30.5

The general death-rate for the year 1884 is shown to be 30.5 per mille of the population of the town, against 28.4 in the previous year. The number of deaths from cholera, 2,272, was the highest on record for the past ten years, and more persons died of small-pox than in any year since 1879. There were fewer deaths, however, from diarrhoea and dysentery, the total being 1,209 against 1,307 and 1,454 in the two preceding years. The mortality from fevers and "other causes" slightly increased. The Inspector-General has made some remarks on the high rate of mortality during the year from cholera and small-pox, which are not out of place in the present report; for the mortuary returns of the hospitals are, to a great extent, influenced by the condition of things prevailing outside the limits of the hospitals, which occasions or prevents the outbreak of epidemic disease. There can be no doubt, as the Inspector-General observes, that "the high mortality from cholera distinctly points to an absence of sanitation in the situations in which the disease found an abiding place; while 478 deaths from small-pox point to the need of far greater activity on the part of those whose duty it is to protect the people." The following statement shows the number of cases among the principal diseases treated in the several hospitals in Calcutta during the year, and the number of such cases which proved fatal:—

MEDICAL INSTITUTIONS.	CHOLERA.		DIARRHOEA AND DYSENTERY.		FEVER.		SMALL-POX.		OTHER CAUSES.		TOTAL.	
	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.	Cases.	Died.
Medical College Hospital	244	111	245	51	401	46	8	4,097	422	4,905	630
Presidency General Hospital	45	28	249	6	617	21	8	1	2,117	64	3,073	124
Mayo Hospital	34	14	154	13	329	51	4	1,020	193	2,451	391
Campbell Hospital	236	161	1,244	561	1,323	103	25	85	3,431	530	6,525	1,040
P. & G. Hospital	10	4	385	3	573	19	3	950	7	2,221	24
General Hospital	146	78	358	133	353	37	1	710	101	1,868	269
Total	1,023	536	2,674	707	3,887	346	275	86	12,974	1,321	24,533	3,054

There was a considerable increase both in the number of cholera and small-pox cases treated in the hospitals, the number under each of these heads being 1,023 and 275 against 932 and 111 respectively in the year 1883. The death-rate, however, under both heads was lower than that of the previous year, being 523 and 312 per mille against 547 and 315 per mille respectively. The number of fever cases fell from 4,141 in 1883 to 3,887 in the year under report; but the number of deaths from this cause rose from 323 in 1883 to 348 in 1884.

2. The following table shows the total number of persons treated, both as in-door and out-door patients, in the several hospitals in Calcutta during the past two years, and the number of deaths which occurred among those under treatment :—

MEDICAL INSTITUTIONS.	1884.				1883.			
	TOTAL TREATED.			Died per mille of treated.	TOTAL TREATED.			Died per mille of treated.
	In-door.	Out-door.	Total.		In-door.	Out-door.	Total.	
Medical College Hospital	5,522	44,562	50,084	126.1*	5,541	51,022	56,563	112.04*

GRAND TOTAL	21,300	235,685	257,045	146.7	20,381	233,248	253,629	136.83

* Reckoned on the cases treated, exclusive of ophthalmic cases.

Compared with the statistics of the previous year, there was an increase of 979 in the total number of in-door patients treated at the hospitals, and a falling off, to the extent of 3,652, in the number of out-door patients treated during 1884. The increase in the number of in-door patients is confined to the Mayo Hospital with its allied dispensaries, and the Campbell Hospital; and is attributed in the case of the former to the large number (344) of cholera cases admitted, and in the case of the latter to the unusual number (457) of cholera and small-pox cases combined.

The falling off in the number of out-door patients treated during 1884, as compared with the number treated in 1883, was greatest in the Medical College Hospital, where the number fell from 51,022 to 44,562. A most satisfactory reason is assigned for this, viz. "the establishment of chemists' shops throughout the town, to which qualified surgeons are attached, who give advice and perform minor operations free of charge." There was a decrease of 2,931 in the number of out-door patients treated in the Mayo Hospital; but the reverse was the case in its dispensaries, chiefly in the Chandney Hospital, where the number rose from 65,630 in 1883 to 69,967 in 1884. Of the 44,562 out-patients treated at the Medical College Hospital, 15,989 were treated in the Medical Dispensary, 11,804 in the Surgical, 6,274 in the Ophthalmic, and 1,374 in the Dental Department: 9,121 patients were treated in the duty-room after dispensary hours.

3. The daily average number of patients under treatment in each of the hospitals for the past two years was as follows :—

	1883.		1884.	
	In-door.	Out-door.	In-door.	Out-door.
Medical College Hospital	289.35	292.55	331.24	311.65
Presidency General Hospital	148.6	...	165.27	...
Mayo Hospital	92	1222.39	96.6	1,211.2
Campbell Hospital	339.1	...	360.83	...
Police Hospital	87.02	...	83.47	...
Howrah General Hospital	60.14	102.8	62.13	88.06

4. Of the total number (257,045) of persons treated during the year, 156,309 were adult males, 36,398 were females, and 64,338 were children. The statistics according to race were 10,032 Europeans, 29,913 Eurasians, 87,615 Mahomedans, 122,919 Hindus, and 6,566 of other races. These figures differ in a very small degree from those recorded in 1883.

5. The mortuary statistics of Calcutta for 1884 show the year to have been unusually unhealthy, and it is not, therefore, surprising to learn that the number of sick in hospital rose from 19,872 to 20,833, and that the death-rate among them was 127 against 116 in 1883. As regards the particular diseases treated at the hospitals, the Inspector-General makes the following remarks :—

"The quantity of fever and its sequelæ varied but little from that of 1883, but was quite as fatal, and while the deaths from diarrhœa increased in the Campbell Hospital they fell elsewhere. Dysentery increased in quantity but decreased in severity; cholera and small-pox furnished a large mortality, although the percentage of deaths to total treated of both diseases showed that they were of a less fatal type than in 1883. In the Small-pox Hospital

at Sealdah, 251 persons were treated in 1884. It is recorded that of this number 85 had been vaccinated, of whom 16 died; 5 had suffered from a previous attack of disease, of whom none died; that 28 had been inoculated, of whom 12 died; and that 133 were unprotected altogether, of whom 57 died."

The Lieutenant-Governor observes that diarrhoea is every year reported as being more fatal at the Campbell Hospital than elsewhere. The following are the averages of deaths from diarrhoea per 1,000 at this hospital reported since 1879:—

1879	551
1880	543
1881	555
1882	594
1883	629
1884	518

The figures for 1884 compare favourably with those for previous years; but the average number of deaths per mille is far in excess of that reported from any other hospital. The Lieutenant-Governor would be glad to receive some explanation of this fact.

As regards the "other diseases" treated at the hospitals, special mention is made by the Inspector-General of "the frequency of chest maladies and the heavy mortality they yield." He observes:—

"The exciting causes of pulmonary diseases are obscure. We notice epidemic occurrence of pneumonia, for instance, in our cold, damp weather, and at other times under conditions precisely the reverse. The disease is met with in our hospitals in both medical and surgical practice, and as a complication in the reduced and exhausted. The physical surroundings of many fatal cases outside our institutions lead to the conclusion that a vitiated state of the air breathed is one, if not the principal, factor in the causation of the disease, rather than, as is too often supposed, mere changes in the temperature or humidity of the atmosphere. The disorder is so frequently a concomitant during the progress of some diseases that it is not unreasonable to believe the productive sources are alike."

6. Paragraphs 24 to 29 of the report are devoted to a discussion as to the distinction to be drawn between enteric (typhoid) fever and remittent fever, in order to arrive at some accuracy in the statistics recorded of each; and some suggestive remarks of Dr. Birch, Superintendent of the Presidency General Hospital, are quoted. Attempts have been made, with partial success, to diagnose the disease commonly known as typhoid fever, and to trace its etiology, and it is hoped that greater light will be thrown upon the subject as further enquiries are instituted.

7. The number of important surgical operations performed during the year was 1,368 against 1,253 in the previous year. Of these, cures were effected in 910 cases, relief was afforded in 139 cases, and death resulted in 99 cases; while of the remainder some were discharged, and some were still under treatment at the close of the year.

Exclusive of ophthalmic operations, which amounted to 459, the number of major operations performed at the Medical College Hospital during the year was 416, of which 52 resulted in death, against 377 operations with 61 deaths in 1883. Four cases of diphtheria were admitted, all of which proved fatal. Tracheotomy was performed in each instance, but without effect. The number of minor operations undertaken was 4,505; no fatal results attended these. There was a decided falling off in those affections known as "hospitalism," which is attributed by the Inspector-General partly "to a modified antiseptic method of treatment, though chiefly to a greater attention to true sanitation in every direction."

The number of major operations performed at the Presidency General Hospital was 54, out of which 3 resulted in death. The number of minor operations was 63.

At the Mayo Hospital 229 major and 12,783 minor operations were performed during the year. In 23 cases the major operations were attended with death.

At the Campbell and Howrah General Hospitals 168 and 40 major and 259 and 997 minor operations, respectively, were performed during the year. The number of fatal cases at each of these institutions was 12 and 9 respectively.

8. The Lieutenant-Governor observes with satisfaction the growing usefulness of the Eden Hospital, which is attached to the Medical College

Hospital. The rapidity with which this institution is growing in popular estimation is a sure indication that its establishment has fulfilled a public want. The number of women and children treated during the year was 1,390 against 1,300 in the previous year. Of the total number, 890 were Europeans and 500 natives. The deaths among the former amounted to 37, and among the latter to 40. The number of confinement cases rose from 314 in 1883 to 371 in 1884. The mortality among this class of cases was, however, heavier, there being 29 deaths against 12 in the previous year. The reason assigned for this increase is that many of the cases were admitted in a very hopeless condition. There were nine cases of septicæmia, all of which proved fatal. In four of these cases the disease had been contracted before admission. Owing to the increasing number of native patients seeking admission, the lower portion of the hospital was opened during the year.

9. The system of nursing which has now been established at the Medical College and General Hospitals, under the immediate superintendence of the Ladies of the Clewer Sisterhood, is deservedly spoken of in the highest possible terms. The Ladies' Committee of the Hospital Nurses Institution, upon whose exertions depend the adequacy and efficiency of the nursing staff, are to be congratulated upon the marked success which has attended their efforts up to the present time, and the Lieutenant-Governor desires to take this opportunity of once more placing on record his recognition and high appreciation of the good work which is being done by them. The sanction of Government was recently conveyed to the carrying out of certain alterations in the quarters provided for the nurses, so as to afford accommodation for an increased number. With a larger staff of nurses, the Ladies' Committee hope to extend their sphere of operations.

10. The financial results of the management of the Calcutta Hospitals during the year were, on the whole, satisfactory. The amount of invested capital rose from Rs. 5,47,700 in 1883 to Rs. 5,53,300. The increase was confined to the Medical College and Mayo Hospitals, where the sums invested were Rs. 600 and Rs. 5,000 respectively. The total expenditure, excluding the amount invested, was Rs. 4,13,315, which exceeded the amount expended in 1883 by Rs. 8,631. The net cost to Government of all the hospitals amount to Rs. 2,54,214, which was less by Rs. 8,104 than the amount expended by Government in the previous year. There was a total decrease of Rs. 18,027 in the expenditure incurred at the Campbell, Police, and Howrah Hospitals together, and an increase of Rs. 9,923 in the Medical College and General Hospitals.

11. The total income of the Medical College Hospital, derived from local sources, amounted to Rs. 17,397 against Rs. 15,178 in the previous year. Of this amount, Rs. 13,457 represent receipts from paying patients, port dues, &c., Rs. 3,340 interest on investments, and Rs. 600 subscription from natives. The net cost of the institution to Government, deducting the amount remitted to the treasury, was Rs. 98,344 against Rs. 93,856 in the previous year. The total expenditure of the Hospital amounted to Rs. 1,16,252 against Rs. 1,07,232 in 1883 and Rs. 89,632 in 1882. The increase in the expenditure during the last three years has not been satisfactorily explained, and seems to point to a laxity in the administration of the funds of this institution. The attention of the Executive should be specially directed to the matter. The average cost of daily diet during the year, which was slightly higher than that of the previous year, was 6 annas and 9 pies in the case of Europeans, and 3 annas and 2 pies in the case of natives.

12. At the Presidency General Hospital, the total receipts from local sources amounted to Rs. 50,843 against Rs. 44,533 in 1883, including Rs. 1,526 received from the Prince Gohar Mahomed Fund. The amount received from paying patients was Rs. 15,926 against Rs. 13,696 in 1883. The receipts from the Port Fund exceeded those of the previous year by Rs. 3,136. The net cost to Government, exclusive of the salaries of the Covenanted Medical Officers, was Rs. 42,119. The total expenditure during the year was Rs. 1,36,237 against Rs. 1,23,126 in 1883. The increase was chiefly due to the expenditure under buildings and repairs. "Besides quadrennial repairs to the central building, converting eastern and western building into private wards, dismantling old guard-room and cook-house, and constructing partition wall and

brick nogging partition, the Calcutta filtered water was laid on." The average cost of daily diet was 7 annas and 9 pies, the same as it was in the previous year.

13. The total receipts from local sources at the Campbell Hospital amounted to Rs. 33,384, of which Rs. 30,000 were paid by the Municipality, and the remainder from port funds, paying patients, sale of medicines, &c. Government contributed Rs. 27,340 against Rs. 44,437 in 1883. The total expenditure amounted to Rs. 60,724 against Rs. 75,863 in the previous year. This decrease is only due to a less amount having been expended on "buildings and repairs" than was expended in 1883. In all other items there was an increase of expenditure, which is said to be due to the large accession in the number of small-pox cases treated during the year.

14. The total expenditure incurred at the Police Hospital during the year was Rs. 15,726 against Rs. 10,685 in 1883, showing a decrease of Rs. 899. Of the total amount expended, five-sixths were paid by the Calcutta and Suburban Municipalities and one-sixth by Government. The daily cost per head was the same as in the previous year, viz., 2 annas and 2 pies. The expenditure on clothing fell from Rs. 554 in 1883 to Rs. 231 in the year under report.

15. The total income from local sources of the Mayo Hospital and its dispensaries during the year amounted to Rs. 23,304, of which Rs. 16,858 represented interest on investments. The invested capital of the institution at the close of the year stood at Rs. 3,47,400, or Rs. 5,000 more than it was at the beginning of the year. The amount contributed by Government was Rs. 37,366. The total expenditure amounted to Rs. 56,745 against Rs. 55,124 in 1883. Deducting the amount spent on buildings in the two years, the expenditure was Rs. 54,568 against Rs. 52,524. Of the total expenditure, Government contributed 66 per cent., the remaining 34 per cent. having been met from the private funds of the institution. The surplus balance at the close of the year was Rs. 5,760. The Lieutenant-Governor agrees with the Inspector-General of Civil Hospitals in thinking that the time has arrived for reconsidering the Government grant to this institution. If the amount of savings which are being annually invested were utilized in defraying the expenses of the Hospital, so large a contribution from Government as is now being given will not be necessary. The Inspector-General will be requested to forward a special report on this matter.

16. At the Howrah General Hospital the total income from private sources during the year amounted to Rs. 21,292 against Rs. 22,674 and Rs. 22,885 in the two preceding years. Of the total amount received, Rs. 6,486 were paid by the Port Trust for diet of sick seamen, Rs. 2,600 by the Municipality, Rs. 1,680 were derived as interest on investments, Rs. 10,495 were received as subscriptions from Europeans, and Rs. 31 as subscriptions from natives. Government contributed Rs. 4,413 in the shape of European medicines, registers and forms, diet of police cases, salaries and special allowances. The total expenditure amounted to Rs. 25,499 against Rs. 24,639 in 1883. The increase was chiefly due to a larger amount being spent on "buildings and repairs." There was an increase of Rs. 377 in the cost of establishment. The average cost of each diet was 8 annas and 3 pies in the case of Europeans, and 2 annas and 3 pies in the case of natives. The corresponding figures in the previous year were 9 annas, and 2 annas and 1 pie, respectively.

By order of the Lieutenant-Governor of Bengal,

J. WARE EDGAR,

Offg. Secy. to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal. as reported to Government during the week ending the 19th September 1885.

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
BENGAL.			
Western Districts.			
BURDWAN DIV.	1 Burdwan, Sept. 19 '85	2.11	Weather—seasonable. Prospects of <i>amun</i> very good. <i>Aus</i> has commenced to be harvested. Price of rice 11½ to 15½ seers per rupee. Health generally good.
	Culina ...	4.74	
	Cutwa ...	0.28	
	Rancegunge ...	0.43	Weather—bright and sultry, with moderate rain now and then. Standing crops doing well. Prices stationary. General health good.
	2 Bankoora, " 19 "	0.67	
	Bishenpur ...	1.14	Weather—seasonable. Transplanting of <i>amun</i> crop finished. Some damage done by floods. Prospects of crops otherwise good. Prices of food-grains high. Cholera still prevalent.
	3 Beerbhoom, " 19 "	0.06	
	Rampore Haut ...	0.40	Weather—rainy. It is difficult to judge just yet of the actual damage caused by the floods. A few cases of cattle disease in Garbeta thana. Public health normal.
	4 Midnapore, " 19 "	2.31	
	5 Hooghly, " 19 "	2.29	Rain has greatly diminished; cloudy in early part of the week, sun shining in later part. In the Sudder and Serampore sub-divisions, there is every prospect of an average outturn on the whole. In the Jehanabad sub-division, the crops have been much injured, and are partially lost in the flooded tracts, but the <i>amun</i> is good in the high lands. Some cases of cholera in the Jehanabad and Serampore sub-divisions. Fever very general.
Serampore ...	1.26		
Jehanabad ...	0.98	Weather—sultry, with showers. The part of the crops left, viz. most of the crop in Shampore and about one-fourth of the remainder, is doing well.	
Howrah, " 21 "	1.60		
Oooloeriaha ...	3.31		
Central Districts.			
PRESIDENCY DIV.	6 24-Pergha, Sept. 21 '85	1.08	Weather—hot for the season. Harvesting of <i>aus</i> continues. <i>Amun</i> on high lands doing well, but loss is expected in north-east in some of the lower tracts. Public health generally good.
	7 Nudda, " 19 "	0.87	Weather—hot and cloudy. Rivers are going down day by day. The flood has done much damage to the standing crops. <i>Amun</i> is totally destroyed except in Chuadanga. Of the <i>aus</i> over the whole district about 4 annas has been saved.
	Meherpur ...	1.74	
	Choondanga ...	5.26	Weather—much rain, with a few fine days. Except in the northern part of Satkhira, the prospect of rice crops is reported very good. Public health fair.
	8 Khoolna, " 19 "	3.12	
	9 Jessore, " 19 "	4.23	Weather—rainy and cloudy. Bongong sub-division has been seriously inundated over a large portion of its area, and considerable injury has been caused to the <i>amun</i> crop there. Measures have been adopted to help the people in the inundated tracts of this sub-division. The Sudder and other sub-divisions of the district have also been visited by inundation, but to a smaller extent, and the <i>amun</i> crop in the inundated places is in danger. The harvesting of the <i>aus</i> crop has been almost completed. The outturn of this crop will not be so good as was at first expected, owing to continuous rain and to the inundation which have caused loss. Fever continues.
	Jhenida ...	1.69	
	Magoora ...	2.25	Weather—seasonable. <i>Amun</i> on the high lands doing well, but on the low lands it has suffered as well as the <i>aus</i> . What proportion of <i>aus</i> will be reaped not yet fully estimated. Sowing of <i>kalai</i> has commenced in the Jungipore <i>churs</i> . Public health good. Common rice selling at from 10 to 13 seers per rupee.
	10 Moorshedabad, " 19 "	4.30	
	Lalbach ...	1.99	Weather—showery, but rain reported from every thana. Both harvest and cultivation most satisfactory. Average price of rice 15 seers per rupee.
	Kandi ...	1.20	
	Jungipore ...	0.59	Weather—cloudy, with occasional slight showers. Harvesting of <i>aus</i> paddy continues. Floods gradually subsiding. Prospects of <i>amun</i> paddy, sugarcane and other standing crops generally fair. Fever general.
	11 Dinagepore, Sept. 18 "	1.62	
	12 Rajshahye, " 19 "	0.35	Weather—hot, with occasional showers. There are no complaints of want of rain. Transplanting of <i>amun</i> still not completed. Prospects of other standing crops good. Price of rice still rising, although <i>aus</i> crop has been harvested. Sporadic cases of cholera in Buddergunge and Neabetsgunge thanas have been reported. Fever still prevalent in the Sudder station.
	Nattore ...	2.66	
	Nowgong ...	0.81	Weather—cool, scanty rainfall. A few earth tremors were felt. Prospects of crops good. Public health fair.
	13 Rungpore, " 19 "	4.15	
Gulbanda ...	0.85	Weather—cloudy and rainy. All prospects good.	
Kurigram ...	3.37		
Nilphamari ...	1.59	Weather—still wet. Harvest disappointing but average. Prospects excellent.	
14 Bogra, " 19 "	1.86		
15 Pubna, " 19 "	2.99	Weather—showery, cool, cloudy. State and prospects of crops good. Cattle-disease continues at Falacotta.	
Serajgunge ...	2.57		
16 Darjeeling, " 19 "	3.31		
17 Julpigoree, " 19 "	11.84		

No.	District, and date of return.	Rainfall at Sadler Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.	
BENGAL.— <i>conold.</i>				
Eastern Districts.				
Dacca Division.	18 Dacca, Sept. 19 '85	2.26	Weather—seasonable. Harvesting of <i>aus</i> rice nearly completed, and that of jute going on. Prospects of <i>amun</i> continue favourable. Rivers are still rising, and in Nawabganj thana a little damage to crops on low lands is reported. Public health good.	
	Manickgunge	2.80		
	Munshigunge	3.8		
	Naraingunge	4.22		
	19 Farreedpore, „ 19	2.71		
	Madaripore	0.80		
	20 Backergunge, „ 17	1.83		
Dacca Division.	21 Mymensingh, „ 19	3.33	Weather—rainy and cloudy. The constant rain has caused some damage to the harvested <i>aus</i> paddy. Prospects of <i>amun</i> paddy cheerful. General health good.	
	Jamalpur	3.37		
	Kishoregunge	3.35		
	Attia	1.03		
	Netrokona	4.38		
	22 Chittagong, Sept. 22 '85	1.33		Weather—seasonable. Prospects of crops generally fair. Transplanting of <i>amun</i> continues. Prices falling. Cholera still reported.
	23 Noakholly, „ 18	6.86		
Fenny	5.42			
24 Tipperah, „ 17	3.32			
Brahmanbariah	3.87			
Chandpore	1.90			
25 Chittagong Hill „ 15	2.37			
Tracts.		Heavy rain occasionally throughout the week. Harvesting of <i>joom</i> paddy still continues. Prospects of sugarcane and cotton crops good. Public health slowly improving.		
Hill Tipperah, „ 16	3.63		Weather—cloudy and rainy. Transplanting of <i>amun</i> paddy yet continues. Sugarcane doing well. <i>Joom</i> paddy being reaped. Public health good.	
BEHAR.				
Patna Division.	26 Patna, Sept. 19 '85	0.10	Weather—hot. Transplanting of paddy nearly over. Harvesting of <i>bhadoi</i> progressing. Cholera still reported from the sub-divisions.	
	Dinapur	Nil		
	27 Gya, „ 19	0.03	Weather—fair. Average outturn of <i>bhadoi</i> estimated at 10 to 12 annas. <i>Khurrie</i> promising. A few cases of cholera reported from Rajouli. Prices almost stationary.	
	28 Shahabad, „ 19	1.07		
	Sasaram	Nil	Weather—hot and bright with occasional clouds, sometimes followed by showers. Harvesting of <i>bhadoi</i> approaching completion. Prospects of winter rice excellent. Fever of a bad type had broken out in the Sasaram sub-division, but is abating. Cattle-dysentery also prevails in that sub-division. Fever and cholera reported from Bhabnua.	
	Buxar	3.92		
	Bhabnua	Nil		
	29 Darbhanga, „ 19	2.21	Weather—clear and hot. Reaping of the <i>bhadoi</i> harvest nearly over. <i>Murwa</i> greatly injured by the late excessive rain and floods. Considerable injury has also been done to the paddy plants on low lands by the overflow of the Bagmati and Karai. Prices still continue stationary. Public health generally good.	
	Madhubani	1.42		
	Tajpur	1.70		
	30 Mozufferpore, „ 19	Nil	Weather—mostly clear and bright. Considerable injury has been done by floods, but on the whole prospects are excellent. Fine weather has been very beneficial. Harvesting of maize, <i>kodo</i> , &c., has commenced. Mortality from cholera and fever still heavy.	
	Hajipur	0.81		
	Sitamarhi	1.37		
	31 Saran, „ 19	0.20	Weather—fair and sultry, with occasional clouds. <i>Bhadoi</i> harvest has commenced. Prospects of paddy continue fair. Manufacture of indigo <i>khoont</i> (second cuttings) going on. Cholera has abated. General health on the whole fairly good.	
	Sewan	1.22		
	Gopalgunge	0.20		
	32 Champarnu „ 19	0.64	Weather—cloudy and fine. The excessive rain has done some damage to the <i>makai</i> and other <i>bhadoi</i> crops. Prospects of <i>aghani</i> crops excellent. Prices have fallen slightly. Cholera has abated both in town and the interior.	
	Bettiah	0.42		
Bhagalpur Division.	33 Monghyr, Sept. 19 '85	0.59	Weather—seasonable. The break in the rains has been beneficial. Prospects of <i>aghani</i> continue good. Gangos has fallen very much during past week. Cholera abating. Prices steady.	
	Begusarai	0.08		
	Jamui	1.12		
	34 Bhagulpore, „ 19	Nil	Weather—fine; light clouds. Prospects of winter rice remarkably good all over the district. The break in the rains has come just in time for the <i>bhadoi</i> harvest in the north and the <i>kurthi</i> sowings in the south. Floods are subsiding and sowing of peas, &c., has begun. Cholera increasing slightly in the north, but decreasing in the south. Prices falling.	
	Banka	0.81		
	Muddehporeah	4.81		
	Soopole	4.11		
	35 Purneah „ 19	1.58	Weather—fine. <i>Aghani</i> where sown promises well. Gangos falling fast. Much fever. Rice selling at 16 seers per rupee.	
	Kissengunge	3.02		
	Arrareah	0.75		
	36 Maldah „ 19	1.94	Weather—clear and fine throughout the week. Prospects of winter rice continue good. Sowing of <i>kalai</i> has commenced. Rivers falling fast. Common rice selling at 13 seers and <i>bhadoi</i> at 15 to 16 seers a rupee at English Bazar. Public health generally good.	
	Chanchal	1.74		
	37 Sonthal Pergah, „ 19	1.52	There has been a clear week of sunny days, which will do much good. The <i>janera</i> crop is now being cut. The outturn is poor. The paddy crop promises well. In Rajnehal efforts are being made to transplant rice seedlings on the lands which have emerged from water after the recent floods. Cholera still at Deoghur.	
	Deoghur	0.95		
	Godda	0.34		
	Jamtara	0.19		
	Rajmehal	2.25		
	Pakour	2.99		

No.	District, and date of return.	Rainfall at Sudder Station in inches.	Character of the weather, state and prospects of the crops, and state of health at date.
ORISSA.			
ORISSA DIV.	38 Cuttack, Sept. 18 '85	2.34	Weather—cloudy at times. More rain expected. <i>Beali</i> being harvested, with fair outturn everywhere. <i>Sarad</i> being weeded and growing well. Rain of 14th and 15th has been beneficial to this crop. Common rice is selling at 12 seers per rupee in town. Public health generally good.
	39 Pooree, " 17 "	0.79	Weather—hot, with occasional showers towards the end of the week. Weeding of <i>sarad</i> paddy going on. Second weeding has begun in some places. Where rain has fallen all crops of this season have been much benefited. <i>Beali</i> is being harvested. <i>Sarad</i> paddy bordering the Chilka is doing badly owing to drought. Common rice is selling at an average of 18 seers 5 chittacks per rupee in the Sudder sub-division, and 17 seers 10 chittacks in the Khoorda sub-division. Cases of cholera and small-pox occur in the interior of the district.
	Khoorda ...	2.79	
	40 Balasore, " 18 "	1.22	Weather—seasonable. Prospects of crops exceptionally good.
CHOTA NAGPORE.			
South-West Frontier Agency.			
41	Hazaribagh, Sept. 18 '85	0.44	Weather—bright and clear. No rain till yesterday (17th). Slight rain reported from several thanas. <i>Bhadai</i> being harvested; outturn below average. Rice and other crops continue to promise well. Cholera abating, but still severe in parts of the district. A few cases of small-pox also reported.
42	Lohardugga, " 19 "	0.69	Weather—seasonable. Rain is now wanted for <i>aghani</i> rice, except in Chainpur, where there has been an excessive fall. Prices stationary on the whole. Numerous houses and a large extent of crop have been swept away by the Sone. Cholera still prevalent in Ranchee, Mandar, and Lohardugga thanas.
43	Singbhoom, " 18 "	0.57	Weather—seasonable. Bright weather during the week has done great good to all crops. Prices steady. General health good.
44	Manbhoom, " 19 "	0.26	Weather—fine. Maize has been cut; outturn rather below the average. <i>Gundli</i> , <i>kodo</i> , <i>murwa</i> , and <i>gora dhan</i> are being reaped; yield somewhat below average, on account of excessive rain. Prospects of other crops good. Public health good. Prices falling.
	Govindpore ...	0.96
